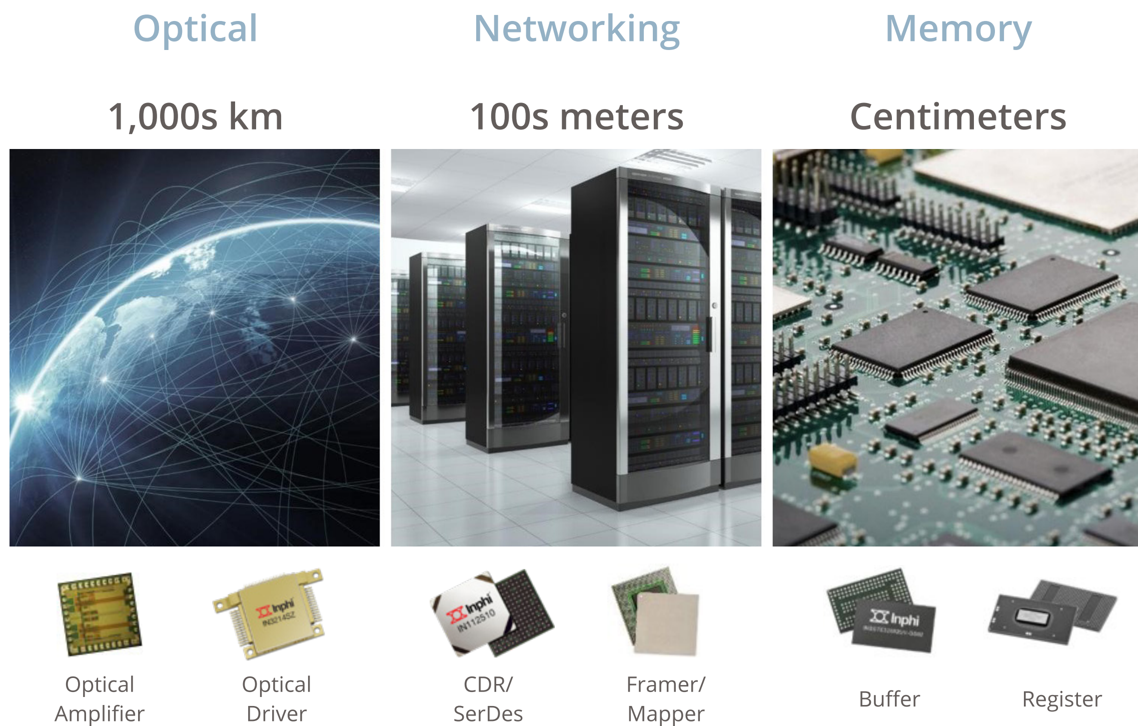
We Move Big Data Faster

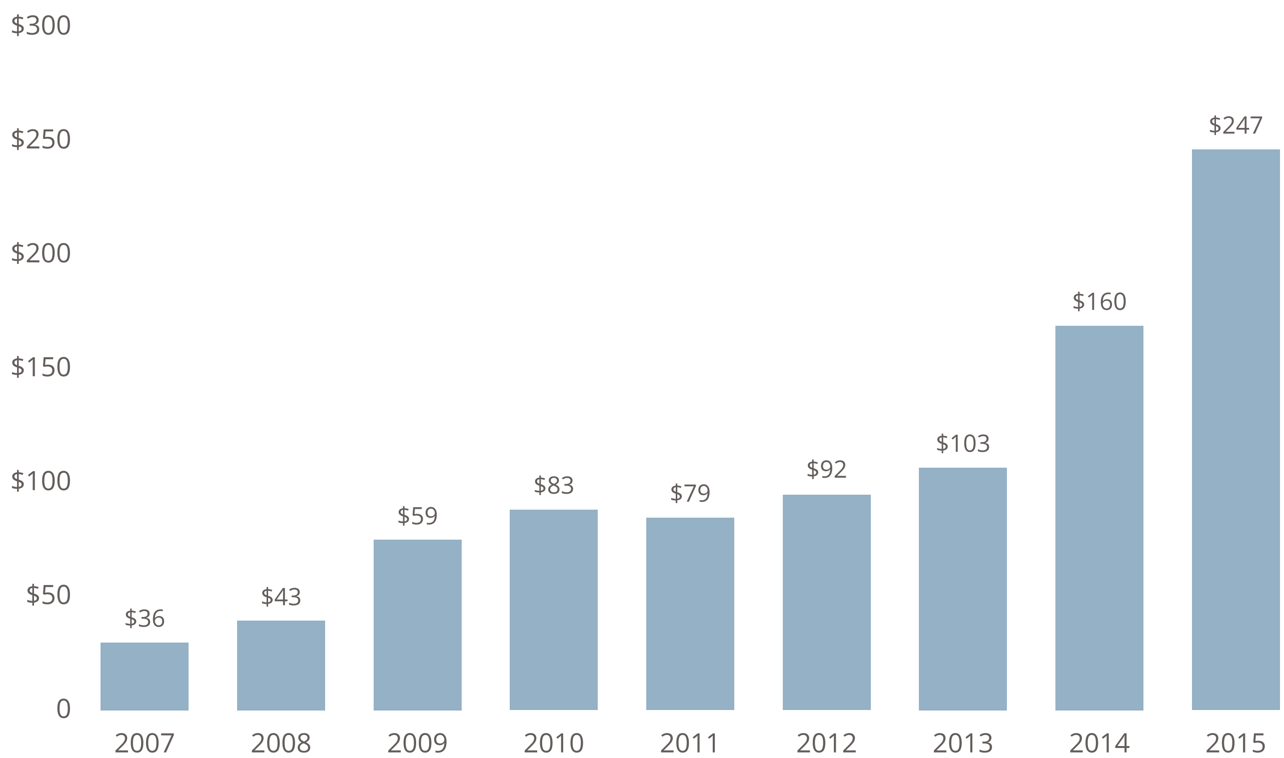
2015 Annual Report

World-leading innovations

Inphi Moves Data from Fiber to Memory



Non-GAAP Annual Revenue ($M)



April 26, 2016

Dear Inphi Stockholders:

I am pleased to report that we continued our string of accomplishments at Inphi in 2015. We further strengthened our relationships with our loyal customers, added important new customers to our list, strategically expanded our product line, grew our team and exceeded our financial targets. Once again, we achieved the highest revenue and operating margin in our history. We continue to be confident that, given the large and growing opportunities in front of us, we are just getting started. These opportunities include ongoing exponential growth in the volume and importance of data, continued ramping of smart devices, continued waves of enterprises shifting infrastructure, storage and critical applications to the cloud, and the continued evolution of the worldwide cellular infrastructure. All these trends are driving the need for speed within and between data centers and across long distances and served as tailwinds that accelerated Inphi's business growth in 2015.
We expect similar trends in the years ahead.

Strong Financial Results

In 2015, we achieved 54% revenue growth and 68% EPS growth over 2014. While this was due in part to the October 2014 Cortina acquisition, we still delivered nearly 50% organic year over year growth in our core communications business including Amplifiers, Drivers as well as 10, 40 and 100G physical interface products serving the service provider and data center interconnect markets. In our memory interconnects business, we regained market share in 2015, doubling our quarterly revenue from the first half to the second half of the year. We expect continued growth in our DDR4 products looking forward. In Q4 we achieved 21.8% in non-GAAP operating profit, an exceptional gross margin of 71.4% and a record 29% free cash flow as a percent of revenue. We also took advantage of low interest rates and issued more than $200M in convertible debt, enhancing our strategic flexibility. These results were driven by the continued growth of our customer base in both the service provider and data center markets.
While we delivered solid results in 2015, the design win funnel and orders continue to grow at a rapid pace. Our module and system OEM customers are gearing up for strong business in reliable high-speed data delivery between and within data centers for the years to come.

An Award Winning Year

For some time, we have been confident that Inphi has the right team, to deliver the right products, at the right time for both cloud and telecom service providers. Our confidence was validated in 2015 by five important awards from our customers: Specifically, Cisco, FiberHome, Huawei HiSilicon, NeoPhotonics and Sumitomo Electric. The good news continued early in 2016, as we received an important award from Samsung Electronics. These awards were across our optical, networking, memory and transport segments, and from across the globe. Our customers recognized Inphi for excellence in technology, quality, delivery, performance, and for our success and value as a long-term partner. We believe these accolades provide more evidence that our investments in growth and innovation are paying off for our customers and stockholders.

The Planes, Trains and Trucks are on Time and on Track

Solid Growth between Data Centers

You will recall that we have often used the analogy of overnight delivery via planes, trains and trucks to describe our product lines.
Starting with planes, or long distance travel, our optical interconnects are accelerating the movement of data over the long distances between data centers. We have three drivers of growth for these lines. First, our new metro products are growing in both system OEM line cards and module applications. Second, our linear amplifiers and drivers continue to take share. Specifically, customers are enthusiastically embracing our multi-100 Gigabit linear drivers. Our linear driver revenue more than doubled in 2015, much faster than the 50% unit growth forecast for the market in 2015. Third, we also saw progress in the ramp of our new 45Gbaud products, from which we look for solid contributions in 2016. Finally, in 2015, we delivered the foundation for ColorZ™, our fundamental DWDM technology to realize the vision of
"The Cloud is the Network™."

If we use the analogy of a Boeing 747 or Airbus 380 for our long-haul offerings, and regional jets for our metro offerings, then, ColorZ can be compared to a fleet of drones that is delivering a large amount of packages, across 80km distances, in a cost-efficient way, using many parallel links.

New Growth within Data Centers

Moving to our trains, or inside the data centers, our networking interconnects also thrived in 2015. We are pleased to report that our customers are transitioning to the faster 100 Gigabit speeds and the corresponding ramp of our 100 Gigabit NRZ Clock Data Recovery and Gearbox solutions. Based on our conversations at year-end, we continue to believe that PAM will become the standard for 40, 50, 100, 200, and 400G Gigabit for copper, multi-mode fiber, and single-mode fiber interconnects in the years to come. As data centers continue on their growth trajectories, and physical layer speeds accelerate from 1 Gbps speeds to 10, 40 and 100 Gbps speeds and beyond, we believe Inphi will continue to provide leading-performance and differentiated solutions for our customers.

Regaining Share in Memory

Last year we told you of our intent to regain market share with our trucks, our memory interconnects. We are proud of the progress we made in 2015 on that commitment. We began the year with two memory module customers for the Intel Haswell server processor and our business only improved from that strong start. Not only did we regain share, but also from that healthy beginning, we doubled our quarterly revenue from our memory products between the first half to the second half of the year. We are far from finished. Specifically, we plan to gain more register share in 2016 and make strides in the buffer business by 2017.

New Product Introductions Kicking Off a Promising 2016

We continue to work closely with our customers to rethink and design for the data center of tomorrow. As the emergence of cloud-based services dramatically increases the need for multi-terabit per second optical interconnects, we are focusing our efforts on providing innovative solutions that reduce latency, speed the movement of data over longer distances, and support the disaggregation of memory and storage.

We are off to a very fast start. Already this year, we crossed the 1 million shipments mark for our 100G coherent TIA and linear driver ICs, introduced our 45Gbaud long-haul and metro coherent amplifier and linear driver families, announced availability of our second generation, low power PAM4 chipsets for inter- and intra-data center cloud interconnects and introduced the world's lowest power CDR re-timer for module applications.

The recent debut of ColorZ, our 100G DWDM solution, is an industry first. By using silicon photonics and advanced PAM4 signaling, it delivers up to 4Tb/s of bandwidth over a single fiber and up to 100Tb/s between data centers. These "drones" efficiently connect multiple data centers within an 80-kilometer range, allowing them to act as a single data center.

In last year's letter, I expressed confidence in the roadmap for our optical, networking and memory interconnect lines. I have that same optimism for this year's product launches and for the launches in the years ahead. We are designing and providing leading-edge optical, networking and memory interconnects, the fundamental building blocks for the data movement for tomorrow's cloud.

Committed to Strong Stockholder Returns

Our financial results again exceeded industry averages for growth in revenue, gross margin, operating margin and EPS. 2015 was a strong year in both operations and financials. This solid performance leads to our optimism for the road ahead as we look to grow and deliver strong financial results and increasing value to our stockholders in 2016 and beyond.

Non-GAAP	**2013** FY	**2014** FY	**2015** Q1	**2015** Q2	**2015** Q3	**2015** Q4	**2015** FY
Revenue ($M)	$103	$160	$60	$61	$62	$64	$247

PART I

ITEM 1. *BUSINESS*

This report contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. When used in this report, the terms "may," "might," "will," "objective," "intend," "should," "could," "can," "would," "expect," "believe," "estimate," "predict," "potential," "plan," or the negative of these terms, and similar expressions intended to identify forward-looking statements. These statements include statements regarding our anticipated trends and challenges in our business and the markets in which we operate, including the market for 40G and 100G high-speed analog semiconductor solutions, our plans for future products and anticipated features and benefits thereof, expansion of our product offerings and enhancements of existing products, critical accounting policies and estimates, our expectations regarding our expenses and revenue, sources of revenue, our tax benefits, the benefits of our products and services, our technological capabilities and expertise, timing of the development of our products, our liquidity position and sufficiency thereof, including our anticipated cash needs, our operating capital expenditures and requirements and our needs for additional financing and potential consequences thereof, our anticipated growth and growth strategies, our ability to retain and attract customers, particularly in light of our dependence on a limited number of customers for a substantial portion of our revenue, our expectations regarding competition, interest rate sensitivity, adequacy of our disclosure controls, our legal proceedings and warranty claims. These forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by these or any other forward-looking statements. These risks and uncertainties include, but are not limited to, those risks discussed below, as well as factors affecting our results of operations, our ability to manage our growth, our ability to sustain or increase profitability, demand for our solutions, the effect of declines in average selling prices for our products, our ability to compete, our ability to rapidly develop new technology and introduce new products, our ability to safeguard our intellectual property, trends in the semiconductor industry and fluctuations in general economic conditions, and the risks set forth throughout this Report, including the risks set forth under Part I, " Item 1A, Risk Factors". Readers are cautioned not to place undue reliance on these forward-looking statements, which are based on current expectations and reflect management's opinions only as of the date hereof. These forward-looking statements speak only as of the date of this Report. We expressly disclaim any obligation or undertaking to release publicly any updates or revisions to any forward-looking statements contained herein to reflect any change in our expectations with regard thereto or any changes in events, conditions or circumstances on which any such statement is based.

All references to "Inphi," "we," "us" or "our" mean Inphi Corporation.

Overview

Our Company

We are a fabless provider of high-speed analog and mixed signal semiconductor solutions for the communications, datacenter and computing markets. We often refer to our business as covering various data transport segments from "fiber to memory". Our analog and mixed signal semiconductor solutions provide high signal integrity at leading-edge data speeds while reducing system power consumption. Our semiconductor solutions are designed to address bandwidth bottlenecks in networks, maximize throughput and minimize latency in computing environments and enable the rollout of next generation communications, datacenter and computing infrastructures. Our solutions provide a vital high-speed interface between analog signals and digital information in high-performance systems such as telecommunications transport systems, enterprise networking equipment, datacenters and enterprise servers, storage platforms, test and measurement equipment and military systems. We provide 10G/40G, 100G and beyond 100G high-speed analog semiconductor solutions for the communications market and high-speed memory interface solutions for the computing market.

On October 3, 2014, we completed the acquisition of Cortina Systems, Inc. including its high-speed interconnect and optical transport product lines (Cortina) for approximately $52.5 million in cash and approximately 5.3 million shares of our common stock in accordance with the Agreement and Plan of Merger dated July 30, 2014 as amended by Amendment No. 1 to the Agreement and Plan of Merger dated September 25, 2014. We acquired Cortina to expand the Company's market share in high-speed optical and networking interconnects. The revenue and expenses of Cortina are included in the consolidated statement of income for the year ended December 31, 2015.

We leverage our proprietary high-speed analog and mixed signal processing expertise and our deep understanding of system architectures to address data bottlenecks in current and emerging communications, enterprise network, computing and storage architectures. We develop these solutions as a result of our competitive strengths, including our system-level simulation capabilities, analog design expertise, strong relationships with industry leaders, extensive broad process technology experience and high-speed package modeling and design expertise. We use our core technology and strength in high-speed analog design to enable our customers to deploy next generation communications and computing systems that operate with high performance at high speed. We believe we are at the forefront of developing semiconductor solutions that deliver 100G speeds throughout the network infrastructure, including core, metro and the datacenter. Furthermore, our analog signal processing expertise enables us to improve throughput in computing systems. For example, some of our computing products enable up to four times the memory capacity on server platforms while using the current generation of memory devices.

We have ongoing, informal collaborative discussions with industry and technology leaders such as Advanced Micro Devices, Inc. (AMD), ARM Ltd., Ciena Corporation, Cisco Systems, Inc., Huawei Technologies Co., Ltd., Juniper Networks Inc., Intel Corporation, Micron Technology, Inc., Nokia Corporation (Nokia), Samsung Semiconductor Inc. and SK Hynix Inc. to design architectures and products that solve bandwidth bottlenecks in existing and next generation communications and computing systems. Although, we generally do not have any formal collaboration agreements with these entities, we often engage in informal discussions with these entities with respect to anticipated technological challenges, next generation customer requirements and industry conventions and standards. We help define industry conventions and standards within the markets we target by collaborating with technology leaders, original equipment manufacturers, or OEMs, systems manufacturers and standards bodies. Our products are designed into systems sold by OEMs, including Ciena, Cisco, Dell Inc., EMC Corporation, H3C Technologies, Hewlett-Packard Company, Huawei, International Business Machines Corporation (IBM), Juniper, Nokia and Oracle Corporation. We believe we are one of a limited number of suppliers to these OEMs for the type of products we sell, and in some cases we may be the sole supplier for certain applications. We sell both directly to these OEMs and to other intermediary systems or module manufacturers that, in turn, sell to these OEMs.

Our Business

Our semiconductor solutions leverage our deep understanding of high-speed analog and mixed signal processing and our system architecture knowledge to address data bottlenecks in current and emerging network and datacenter architectures. We design and develop our products for the communications and computing markets, which typically have two to three year design cycles, and product life cycles of five or more years. We believe our leadership position in developing high-speed analog semiconductors is a result of the following core strengths:

- ***System-Level Simulation Capabilities.*** We design our high-speed analog semiconductor solutions to be critical components in complex systems. In order to understand and solve system problems, we work closely with systems vendors to develop proprietary component, channel and system simulation models. We use these proprietary simulation and validation tools to accurately predict system performance prior to fabricating the semiconductor or alternately, to identify and optimize critical semiconductor parameters to satisfy customer system requirements. We use these simulation and validation capabilities to reduce our customers' time to market and engineering investments, thus enabling us to establish differentiated design relationships with our customers.

- ***Analog Design Expertise.*** We believe that we are a leader in developing broadband analog semiconductors operating at high frequencies of up to 100 GHz. High-speed analog circuit design is extremely challenging because, as frequencies increase, semiconductors are increasingly sensitive to temperature, power supply noise, process variation and interaction with neighboring circuit elements. Development of components that work robustly at high frequencies requires an understanding of analog circuit design, including electromagnetic theory and practical experience in implementation and testing. Our analog design expertise has enabled us to design and commercially ship several first in the world technologies including the first 100G linear transimpedance amplifier, or TIA, and the first 200G linear modulator driver that is now being widely deployed in volume globally in Long Haul and Metro networking infrastructures. We also launched the industry's first complementary metal oxide semiconductor, or CMOS, based 100G physical layers or PHYs and clock and data recovery, or CDRs, for Ethernet and optical transport network applications. These high speed serial PHYs, are designed in a generic CMOS process to target much lower power compared to silicon germanium or SiGe based products, while reducing the design footprint and improving manufacturability. We also launched the world's first 40/50/100/400G PAM4 interconnect ICs for cloud interconnects. The chipset solution included multiple variants of the PAM4 PHY IC based on a highly adaptable and scalable InphiNityCore ™ DSP engine and the OmniConnect™ transmitter for copper and optics media along with a companion linear TIA for 50G PAM4 interfaces.

- ***Strong Relationships with Industry Leaders.*** We develop many of our high-speed analog semiconductor solutions for applications and systems that are driven by industry leaders in the communications, datacenter and computing markets. Through our established relationships with industry leaders, we have repeatedly demonstrated the ability to address their technological challenges. As a result, we are designed into several of their current systems and believe we are well-positioned to develop high-speed analog semiconductor solutions for their emerging architectures. For instance, our high-speed memory interface designs have been validated for Intel's Xeon® Core i7® and next generation platforms. We have ongoing, informal collaborative discussions with communication and networking companies such as Cisco, Ciena, Huawei, and Juniper, among others to address their next generation 100G and beyond 100G efforts. Specifically, we engage in informal discussions with these entities with respect to anticipated technological challenges, next generation customer requirements and industry conventions and standards. As a result of our development efforts with industry leaders, we help define industry conventions

and standards within the markets we target by collaborating with technology leaders, OEMs and systems manufacturers, as well as standards bodies such as the Joint Electronic Device Engineering Councils, or JEDEC, and the Institute of Electrical and Electronic Engineers, or IEEE, and the Optical Internetworking Forum, or OIF, to establish industry standards.

- ***Broad Process Technology.*** We employ process technology experts, device technologists and circuit designers who have extensive experience in many process technologies including CMOS, SiGe and III-V technologies such as gallium arsenide, or GaAs, or indium phosphide, or InP. We have developed specific internal models and design kits for each process to support a uniform design methodology across all of our semiconductor solutions. For example, our products using 40 nanometer CMOS technology require development of accurate models for sub-circuits such as integrated phase lock loop, or PLLs, varactors and inductors. As another example, for III-V materials-based processes, in-house model development is a necessity and we believe also provides a substantial competitive advantage because these processes have complex material and device interactions. Combined with our fabless manufacturing strategy, our design expertise, proprietary model libraries and uniform design methodology allow us to use the best possible materials and substrates to design and develop our semiconductor solutions. We believe that our ability to design high-speed analog semiconductors in a wide range of materials and process technologies allows us to provide superior performance, power, cost and reliability for a specific set of market requirements.

- ***High-Speed Package Modeling and Design.*** We have developed deep expertise in high-speed package modeling and design, since introducing the first high-speed 50 GHz MUX and DEMUX product in 2001. At high frequencies, the interaction between an analog device, its package and the external environment can significantly affect product performance. Accurately modeling and developing advanced packaging allows semiconductor solutions to address this challenge. Due to the advanced nature of this work, there is a limited supply of engineers with experience in high-speed package modeling and design, and therefore, this required expertise can be difficult to acquire for companies that have not invested in developing such a skill set. We have developed an infrastructure to simulate electrical, mechanical and thermal properties of devices and packages that we integrate within our semiconductor design process and implement at our third-party packaging providers. Modeling is an inherently iterative process, and since our model libraries are used extensively by our circuit designers, the accuracy and value of these models increases over time. Our current packaging and modeling techniques enable us to deliver semiconductors that are energy efficient, offer high-speed processing and enable advanced signal integrity, all in a small footprint.

We believe that our system-level simulation capabilities, our analog design and broad process technology design capabilities as well as our strengths in packaging enable us to differentiate ourselves by delivering advanced high-speed analog signal processing solutions. For example, we believe we are the first vendor who has successfully commercialized 100G Ethernet PHYs and CDRs in standard CMOS process. Within the server market, we have applied our analog signal processing expertise to develop our isolation memory buffer, or iMB™ technology, which is designed to expand the memory capacity in existing server and computing platforms. Adoption of the iMB™ allows up to four times the memory capacity to be installed in a server platform, while using the current generation of memory devices.

We believe the key benefits that our solutions provide to our customers are as follows:

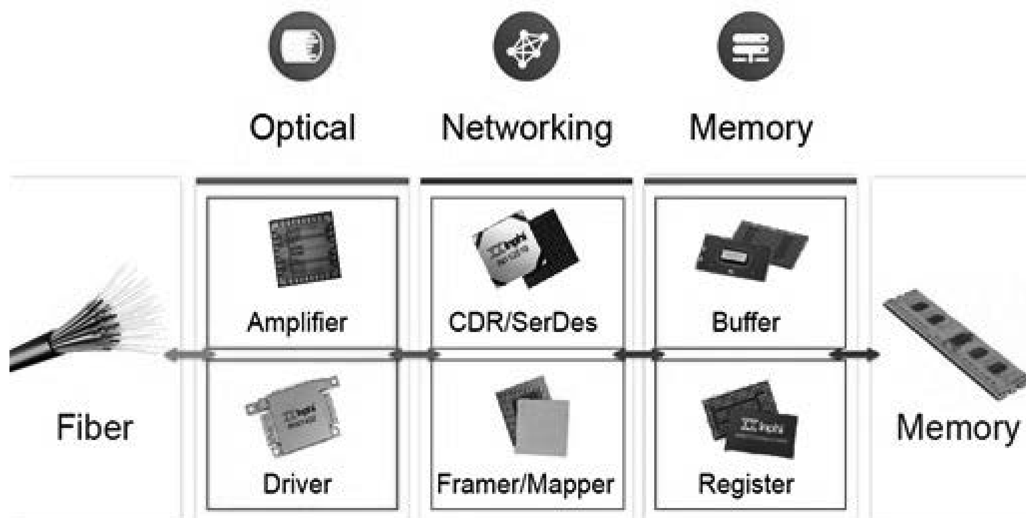
- ***High Performance.*** Our high-speed analog semiconductor solutions are designed to meet the specific technical requirements of our customers in their respective end-markets. In many cases, our close design relationships and deep engineering expertise put us in a position where we are one of a limited group of semiconductor vendors that can provide the necessary solution. For instance, in the broadband communications market, we believe our products achieve the highest signal integrity and attain superior signal transmission distance at required error-free or low error rates. In the computing and datacenter market, we believe our products achieve industry leading data transfer rates at the smallest die size.

- ***Low Power and Small Footprint.*** In each of the end markets that we serve, the power budget of the overall system is a key consideration for systems designers. Power consumption greatly impacts system operation cost, footprint and cooling requirements, and is increasingly becoming a point of focus for our customers. We believe that our high speed analog signal processing solutions enable our customers to implement system architectures that reduce overall system power consumption. We also believe that, at high frequencies, our high-speed analog semiconductor devices typically consume less power than competitors' standard designs, which often incorporate power-consuming digital signal processing to perform data transfer functions, thereby further reducing overall system power consumption. In addition, in many of our applications, we are able to design and deliver semiconductors that have a smaller footprint and therefore reduce the overall system size.

- ***Faster Time to Market.*** Our customers compete in markets that require high-speed, reliable semiconductors that can be integrated into their systems as soon as new market opportunities develop. To meet our customers' time-to-market requirements, we work closely with them early in their design cycles and are actively involved in their development processes. Over the past ten years, we have developed methodologies and simulation environments that accurately predict the behavior of complex integrated circuits within various communications systems. In addition, we have developed an extensive internal library of proven building block circuits such as amplifiers, phase frequency detectors and transmitters that are reused to shorten design cycles and reduce risk.

Products

Our products address bandwidth bottlenecks throughout the network communications and computing infrastructure markets – from "fiber to memory", as depicted in the illustration below. For instance, our products find application in devices such as dense wavelength division multiplexers that enable core and aggregation networks as well as less complex optical interface links within data center communication infrastructures. In addition, our high-speed memory interface products can be found in servers where they allow CPUs to better utilize available memory resources.



As of December 31, 2015, we have a wide range product portfolio, including products that have commercially shipped, products for which we have shipped engineering samples and products under development, that perform a wide range of functions such as amplifying, encoding, multiplexing, demultiplexing, retiming and buffering data and clock signals at speeds up to 100 Gbps. These products are key enablers for servers, routers, switches, storage and other equipment that process, store and transport data traffic. We introduced 32 and 15 new products in 2015 and 2014, respectively. The acquisition of Cortina added approximately 130 products in our portfolio which includes high-speed interconnect and optical transport products. We design and develop our products for the communications and computing markets, which typically have two to three year design cycles, and product life cycles as long as five years or more.

In 2011, we began to ship in production volume a new "ultra-low voltage" version of our integrated PLL and register buffer, which is shipping in the form of product number INSSTE32882UV-GS02, or the GS02UV product. Sales of the GS02UV product comprised 15% and 39% of our total revenue in 2014 and 2013, respectively. In 2012, we introduced and began to ship in commercial volume a dual, differential input linear transimpedance/variable-gain amplifier that we identify as product number IN3250TA-SO2D. Sales of IN3250TA-SO2D product comprised 14% of our total revenue in both 2015 and 2014. In 2010, we introduced and began to ship in commercial volume a dual, differential linear transimpedance amplifier which we identify as product number 2850TA-SO1D. Sales of 2850TA-SO1D product comprised 10% of our total revenue in 2013. There were no other products that generated more than 10% of our total revenue in 2015, 2014 or 2013.

Customers

We sell our products directly to OEMs and indirectly to OEMs through module manufacturers, original design manufacturers or ODMs and sub-systems providers. We work closely with technology leaders, including microprocessor, memory vendors, communications equipment and optical module companies, to design architectures and products that help solve bandwidth bottlenecks in and between systems. These technology leaders often design our products into reference designs, which they provide to their customers and suppliers. For example, in the server market we work closely with major CPU manufacturers to address the bottleneck between the CPU and the increasing amount of memory attached to it. These CPU manufacturers then provide their server CPU customers and memory module partners with a validation report, including validation of our memory interface products. These server OEMs and memory module companies then design our memory interface products into their production systems. Ultimately, our sales into these servers are to memory module companies, including Micron, Samsung, SK Hynix and others. In the networking market, we work closely with OEMs to deliver high performance communication links. These OEMs design our products into their systems and then require their ODM and electronics manufacturing services suppliers to purchase and use that specific product from us. We also work directly with optical module manufacturers to design our products into their modules, which they sell to OEMs.

We work closely with our customers throughout design cycles that often last two to three years and we are able to develop long-term relationships with them as our technology becomes embedded in their products. As a result, we believe we are well-positioned to not only be designed into their current systems, but also to continually develop next generation high-speed analog semiconductor solutions for their future products. During the year ended December 31, 2015, we sold our products to more than 160 customers.

Sales to customers in Asia accounted for 68%, 71% and 71% of our total revenue in 2015, 2014 and 2013, respectively. Because many of our customers or their OEM manufacturers are located in Asia, we anticipate that a majority of our future revenue will continue to come from sales to that region. Although a large percentage of our sales are made to customers in Asia, we believe that a significant number of the systems designed by these customers and incorporating our semiconductor products are then sold to end users outside Asia.

We currently rely, and expect to continue to rely, on a limited number of customers for a significant portion of our revenue. In the year ended December 31, 2015, we believe that sales to Cisco, directly and indirectly, through subcontractors, accounted for approximately 13% of our total revenue and our 10 largest customers collectively accounted for 59% of our total revenue. In the year ended December 31, 2014, sales to Samsung, including its subcontractors accounted for 18% of our total revenue and our 10 largest customers collectively accounted for 61% of our total revenue. In the year ended December 31, 2013, sales to Samsung, including its subcontractors and SK Hynix, including its subcontractor accounted for 20% and 16% of our total revenue, respectively, and our 10 largest customers collectively accounted for 70% of our total revenue. In addition, sales directly and through distributors to Micron accounted for 11% of our total revenue in the year ended December 31, 2013. No other single customer directly or indirectly accounted for more than 10% of our total revenue in 2015, 2014 or 2013.

Sales and Marketing

Our design cycle from initial engagement to volume shipment is typically two to three years, with product life cycles in the markets we serve ranging from two to 10 years or more. For many of our products, early engagement with our customers' technical staff is necessary for success. To ensure an adequate level of early engagement, our application and development engineers work closely with our customers to identify and propose solutions to their systems challenges.

In addition to our direct customers, we work closely with technology leaders such as Intel, ARM and AMD for the computing and storage markets and Alcatel-Lucent, Ciena, Cisco, Huawei and Juniper for the networking and communications market to anticipate and solve next generation challenges facing our customers. As part of the sales and product development process, we often design our products in close collaboration with these industry leaders and help define their architecture. We also participate actively in setting industry standards with organizations such as IEEE, JEDEC and OIF to have a voice in the definition of future market trends.

We sell our products worldwide through multiple channels, including our direct sales force and a network of sales representatives and distributors. For the year ended December 31, 2015, 78% of our revenue was generated by our direct sales team and third-party sales representatives. We operate direct sales offices in Japan, Korea, Taiwan, Singapore, and the United States and employ sales personnel that cover our direct customers and manage our channel partners. We have twenty seven direct sales professionals including three in Japan, fourteen in Asia, seven in North America and three in EMEA. We utilize two sales representatives and eight distributors in Asia, two distributors in Europe, one sales representative and one distributor in Israel, two distributors in Japan and six sales representatives and three distributors in North America. Our channel network includes more than one hundred sales professionals to support our products and customers, including ten in Japan, forty two in Asia (other than Japan), forty six in North America and fifteen in Europe, the Middle East and Africa, or EMEA. All of these sales professionals are sales agents and are employed by our distributors and sales representatives. We believe these distributors and sales representatives have the requisite technical experience in our target markets and are able to leverage existing relationships and understanding of our customers' products to effectively sell our products. Given the breadth of our target markets, customers and products, we provide our direct and indirect sales teams with regular training and share product information with our customers and sales team using web-based tools.

Manufacturing

We operate a fabless business model and use third-party foundries and assembly and test manufacturing contractors to manufacture, assemble and test our semiconductor products. We also inspect and test parts in our Westlake Village, California, facility. This outsourced manufacturing approach allows us to focus our resources on the design, sale and marketing of our products. In addition, we believe outsourcing many of our manufacturing and assembly activities provides us the flexibility needed to respond to new market opportunities, simplifies our operations and significantly reduces our capital requirements.

We subject our third-party manufacturing contractors to qualification requirements in order to meet the high quality and reliability standards required of our products. We carefully qualify critical partners and processes before applying the technology to our products. Our engineers work closely with our foundries and other contractors to increase yield, lower manufacturing costs and improve product quality.

- ***Wafer Fabrication.*** We currently utilize a wide range of semiconductor processes to develop and manufacture our products. Each of our foundries tends to specialize in a particular semiconductor wafer process technology. We choose the semiconductor process and foundry that we believe provides the best combination of performance attributes for any particular product. For most of our products, we utilize a single foundry for semiconductor wafer production. Our principal foundries are Taiwan Semiconductor Manufacturing Company Ltd., or TSMC, in Taiwan, Sumitomo Electric Device Innovations Inc., or SEDI, in Japan, WIN Semiconductors Corp. in Taiwan, and TowerJazz Semiconductor Ltd. in North America.

- ***Package and Assembly.*** Upon the completion of processing at the foundry, the finished wafers are shipped to our third-party assemblers for packaging and assembly. Currently, our principal packaging and assembly contractors are Orient Semiconductor Electronics Ltd., or OSE in Taiwan, STATS ChipPAC Ltd. in Korea, Kyocera Corporation in North America and Japan, Signetics Corporation in Korea, Amkor Technology in Korea and ASEM Technology in Malaysia.

- ***Test.*** At the last stage of integrated circuit production, our third-party test service providers test the packaged and assembled integrated circuits. Currently, OSE in Taiwan, Advanced Semiconductor Engineering or ASE in California, STATS ChipPAC in Korea, Evans Analytical Group or EAG in North America, Signetics Corporation in Korea, Amkor Technology in Korea, ASEM Technology in Malaysia and Presto Engineering in North America are our test partners. We also perform testing in our Westlake Village, California, facility.

We are committed to maintaining the highest level of quality in our products. Our objective is that our products meet all of our customer requirements, are delivered on-time and function reliably throughout their useful lives. As part of our total quality assurance program, our quality management system has been certified to ISO 9001:2008 standards. Our manufacturing partners are also ISO 9001 certified.

Research and Development

We focus our research and development efforts on developing products that address bandwidth bottlenecks in networks and minimize latency in computing environments. We believe that our continued success depends on our ability to both introduce improved versions of our existing products and to develop new products for the markets that we serve. We devote a portion of our resources to expanding our core technology including efforts in system-level simulation, high-speed analog design, supporting a broad range of process technologies and high-speed package modeling and design.

We develop models that are used as an input to a combination of proprietary and commercially available simulation tools. We use these tools to predict overall system performance based on the performance of our product. After our product is manufactured, we perform system measurements and refine our model set to improve the model's accuracy and predictive ability. As a result, our models and simulation tools have improved over time and we have been able to very accurately predict overall system performance prior to fabricating a part.

We have assembled a core team of experienced engineers and systems designers in four design centers located in the United States, Canada, Singapore and United Kingdom. Our technical team typically has, on average, more than 23 years of industry experience with more than 60% having advanced degrees (Masters and above) and more than 16% having Ph.Ds. These engineers and designers are involved in advancing our core technologies, as well as applying these core technologies to our product development activities across a number of areas including telecommunications transport systems, enterprise networking equipment, datacenters and enterprise servers, storage platforms, test and measurement and military systems. In 2015, 2014 and 2013, our research and development expenses were $106.4, $70.9 million and $50.5 million, respectively.

Competition

The global semiconductor market in general, and the communications and computing markets in particular, are highly competitive. We expect competition to increase and intensify as more and larger semiconductor companies enter our markets. Increased competition could result in price pressure, reduced profitability and loss of market share, any of which could materially and adversely affect our business, revenue and operating results.

Currently, our competitors range from large, international companies offering a wide range of semiconductor products to smaller companies specializing in narrow markets. Our primary competitors include Avago Technologies Ltd., Broadcom Corporation, GigOptix Inc., Integrated Device Technology, Inc., or IDT, M/A-COM Technology Solutions Inc., Maxim Integrated, Maxlinear, Inc., Microsemi Corporation, Montage Technology Group Limited, Qorvo Inc., PMC-Sierra, Inc., Semtech Corp. and Texas Instruments Incorporated, as well as other smaller analog signal processing companies. We expect competition in our target markets to increase in the future as existing competitors improve or expand their product offerings.

Our ability to compete successfully depends on elements both within and outside of our control, including industry and general economic trends. During past periods of downturns in our industry, competition in the markets in which we operate intensified as our customers reduced their purchase orders. Many of our competitors are significantly larger, have greater financial, technical, marketing, distribution, customer support and other resources, are more established than we are, and have significantly better brand recognition and

broader product offerings with which to withstand similar adverse economic or market conditions in the future. These developments may materially and adversely affect our current and future target markets and our ability to compete successfully in those markets.

We compete or plan to compete in different target markets to various degrees on the basis of a number of principal competitive factors, including:

- product performance;
- power budget;
- features and functionality;
- customer relationships;
- size;
- ease of system design;
- product roadmap;
- reputation and reliability;
- customer support; and
- price.

We believe we compete favorably with respect to each of these factors. We maintain our competitive position through our ability to successfully design, develop and market complex high-speed analog solutions for the customers that we serve.

Intellectual Property

We rely on a combination of intellectual property rights, including patents, trade secrets, copyrights and trademarks, and contractual protections, to protect our core technology and intellectual property. As of December 31, 2015, we had 570 issued and allowed patents and other patent applications pending in the United States. The 437 issued and allowed patents in the United States expire in the years beginning in 2016 through 2035. Many of our issued patents and pending patent applications relate to high-speed circuit and package designs.

We may not receive competitive advantages from any rights granted under our patents, and our patent applications may not result in the issuance of any patents. In addition, any future patent may be opposed, contested, circumvented, designed around by a third party or found to be unenforceable or invalidated. Others may develop technologies that are similar or superior to our proprietary technologies, duplicate our proprietary technologies or design around patents owned or licensed by us.

In addition to our own intellectual property, we also use third-party licensors for certain technologies embedded in our semiconductor solutions. These are typically non-exclusive contracts provided under paid-up licenses. These licenses are generally perpetual or automatically renewed for so long as we continue to pay any maintenance fees that may be due. To date, maintenance fees have not constituted a significant portion of our capital expenditures. We have entered into a number of licensing arrangements pursuant to which we license third-party technologies. We do not believe our business is dependent to any significant degree on any individual third-party license.

We generally control access to and use of our confidential information through the use of internal and external controls, including contractual protections with employees, contractors and customers. We rely in part on United States and international copyright laws to protect our mask work. All employees and consultants are required to execute confidentiality agreements in connection with their employment and consulting relationships with us. We also require them to agree to disclose and assign to us all inventions conceived or made in connection with the employment or consulting relationship.

Despite our efforts to protect our intellectual property, unauthorized parties may still copy or otherwise obtain and use our software, technology or other information that we regard as proprietary intellectual property. In addition, we intend to expand our international operations, and effective patent, copyright, trademark and trade secret protection may not be available or may be limited in foreign countries.

The semiconductor industry is characterized by vigorous protection and pursuit of intellectual property rights and positions, which has resulted in protracted and expensive litigation for many companies. We have in the past received and, particularly as a public company, we expect that in the future we may receive, communications from various industry participants alleging our infringement of their patents, trade secrets or other intellectual property rights. Any lawsuits could subject us to significant liability for damages, invalidate our proprietary rights and harm our business and our ability to compete. Any litigation, regardless of success or merit, could cause us to incur substantial expenses, reduce our sales and divert the efforts of our technical and management personnel. In the event we receive an adverse

result in any litigation, we could be required to pay substantial damages, seek licenses from third parties, which may not be available on reasonable terms or at all, cease sale of products, expend significant resources to develop alternative technology or discontinue the use of processes requiring the relevant technology.

Employees

At December 31, 2015, we employed 472 full-time equivalent employees, including 288 in research, product development and engineering, 62 in sales and marketing, 46 in general and administrative management and 76 in manufacturing engineering and operations. We consider relations with our employees to be good and have never experienced a work stoppage. None of our employees are either represented by a labor union or subject to a collective bargaining agreement.

Other

We were incorporated in Delaware in November 2000 as TCom Communications, Inc. and changed our name to Inphi Corporation in February 2001. Our principal executive offices are located at 2953 Bunker Hill Lane, Suite 300, Santa Clara, California 95054. Our telephone number at that location is (408) 217-7300. Our website address is *www.inphi.com*. Information on our website is not part of this report and should not be relied upon in determining whether to make an investment decision. The inclusion of our website address in this report does not include or incorporate by reference into this report any information on our website.

We electronically file our annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended, or the Exchange Act, with the SEC. The public may read or copy any materials we file with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. The public may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. The SEC maintains an Internet site that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. The address of that site is http://www.sec.gov. You may obtain a free copy of our annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K and amendments to those reports with the SEC on our website.

ITEM 1A. *RISK FACTORS*

Risks Related to Our Business

Our revenue and operating results can fluctuate from period to period, which could cause our share price to fluctuate.

Our revenue and operating results have fluctuated in the past and may fluctuate from period to period in the future due to a variety of factors, many of which are beyond our control. Factors relating to our business that may contribute to these fluctuations include the following factors, as well as other factors described elsewhere herein:

- the receipt, reduction or cancellation of orders by customers;
- fluctuations in the levels of component inventories held by our customers;
- the gain or loss of significant customers;
- market acceptance of our products and our customers' products;
- our ability to develop, introduce and market new products and technologies on a timely basis;
- the timing and extent of product development costs;
- new product announcements and introductions by us or our competitors;
- incurrence of research and development and related new product expenditures;
- fluctuations in sales by module manufacturers who incorporate our semiconductor solutions in their products, such as memory modules;
- cyclical fluctuations in our markets;
- fluctuations in our manufacturing yields;
- significant warranty claims, including those not covered by our suppliers;
- changes in our product mix or customer mix;

- intellectual property disputes; and
- loss of key personnel or the inability to attract qualified engineers.

As a result of these and other factors, the results of any prior quarterly or annual periods should not be relied upon as indications of our future revenue or operating performance. Fluctuations in our revenue and operating results could cause our share price to decline.

We have an accumulated deficit and have incurred net losses in the past. We may incur net losses in the future.

As of December 31, 2015, we had an accumulated deficit of $102.7 million. We have incurred net losses in the past and may incur net losses in the future. We generated a net loss of $13.6 million, $22.6 million and $13.2 million for years ended December 31, 2015, 2014, and 2013, respectively.

We depend on a limited number of customers for a substantial portion of our revenue, and the loss of, or a significant reduction in orders from, one or more of our major customers could negatively impact our revenue and operating results. In addition, if we offer more favorable prices to attract or retain customers, our average selling prices and gross margins would decline.

For the year ended December 31, 2015, we believe that sales to Cisco, directly and indirectly through subcontractors, accounted for approximately 13% of our total revenue and our 10 largest customers collectively accounted for 59% of our total revenue. For the year ended December 31, 2014, sales to Samsung Semiconductor Inc., or Samsung, including its subcontractors, accounted for 18% of our total revenue, and our 10 largest customers collectively accounted for 61% of our total revenue. For the year ended December 31, 2013, sales to Samsung, including its subcontractors, and SK Hynix Inc., or SK Hynix, including its subcontractor, accounted for 20% and 16% of our total revenue, respectively, and our 10 largest customers collectively accounted for 70% of our total revenue. In addition, sales directly and through distributors to Micron Technology, Inc., or Micron, accounted for 11% of our total revenue in the year ended December 31, 2013. Some of our customers, including Samsung, SK Hynix and Micron, use our products primarily in high-speed memory devices. We believe our operating results for the foreseeable future will continue to depend on sales to a relatively small number of customers. In the future, these customers may decide not to purchase our products at all, may purchase fewer products than they did in the past or may alter their purchasing patterns.

In addition, our relationships with some customers may deter other potential customers who compete with these customers from buying our products. To attract new customers or retain existing customers, we may offer these customers favorable prices on our products. In that event, our average selling prices and gross margins would decline. The loss of a key customer, a reduction in sales to any key customer or our inability to attract new significant customers could negatively impact our revenue and materially and adversely affect our results of operations.

We do not have long-term purchase commitments from our customers and if our customers cancel or change their purchase commitments, our revenue and operating results could suffer.

Substantially all of our sales to date, including sales to Samsung, SK Hynix and Micron, have been made on a purchase order basis. We do not have any long-term commitments with any of our customers. As a result, our customers may cancel, change or delay product purchase commitments with little or no notice to us and without penalty. This in turn could cause our revenue to decline and materially and adversely affect our results of operations.

We may face claims of intellectual property infringement, which could be time-consuming, costly to defend or settle and result in the loss of significant rights and which could harm our relationships with our customers and distributors.

The semiconductor industry is characterized by companies that hold patents and other intellectual property rights and that vigorously pursue, protect and enforce intellectual property rights. From time to time, third parties may assert against us and our customers and distributors their patent and other intellectual property rights to technologies that are important to our business.

Claims that our products, processes or technology infringe third-party intellectual property rights, regardless of their merit or resolution, could be costly to defend or settle and could divert the efforts and attention of our management and technical personnel. For example, Netlist, Inc. filed suit against us in the United States District Court, Central District of California, in September 2009, alleging that our iMB™ and certain other memory module components infringe three of Netlist's patents.

Infringement claims also could harm our relationships with our customers or distributors and might deter future customers from doing business with us. We do not know whether we will prevail in these proceedings given the complex technical issues and inherent uncertainties in intellectual property litigation. If any pending or future proceedings result in an adverse outcome, we could be required to:

- cease the manufacture, use or sale of the infringing products, processes or technology;
- pay substantial damages for infringement;
- expend significant resources to develop non-infringing products, processes or technology, which may not be successful;

- license technology from the third-party claiming infringement, which license may not be available on commercially reasonable terms, or at all;
- cross-license our technology to a competitor to resolve an infringement claim, which could weaken our ability to compete with that competitor; or
- pay substantial damages to our customers or end users to discontinue their use of or to replace infringing technology sold to them with non-infringing technology, if available.

Any of the foregoing results could have a material adverse effect on our business, financial condition and results of operations.

Winning business is subject to lengthy competitive selection processes that require us to incur significant expenditures prior to generating any revenue or without any guarantee of any revenue related to this business. Even if we begin a product design, a customer may decide to cancel or change its product plans, which could cause us to generate no revenue from a product. If we fail to generate revenue after incurring substantial expenses to develop our products, our business and operating results would suffer.

We are focused on winning more competitive bid processes, known as "design wins," that enable us to sell our high- speed analog semiconductor solutions for use in our customers' products. These selection processes typically are lengthy and can require us to incur significant design and development expenditures and dedicate scarce engineering resources in pursuit of a single customer opportunity. We may not win the competitive selection process and may never generate any revenue despite incurring significant design and development expenditures. Failure to obtain a design win could prevent us from offering an entire generation of a product. This could cause us to lose revenue and require us to write off obsolete inventory, and could weaken our position in future competitive selection processes. Even after securing a design win, we may experience delays in generating revenue from our products as a result of the lengthy development cycle typically required. Our customers generally take a considerable amount of time to evaluate our products. Our design cycle from initial engagement to volume shipment is typically two to three years.

The delays inherent in these lengthy sales cycles increase the risk that a customer will decide to cancel, curtail, reduce or delay its product plans or adopt a competing design from one of our competitors, causing us to lose anticipated revenue. In addition, any delay or cancellation of a customer's plans could materially and adversely affect our financial results, as we may have incurred significant expense without generating any revenue. Finally, our customers' failure to successfully market and sell their products could reduce demand for our products and materially and adversely affect our business, financial condition and results of operations. If we were unable to generate revenue after incurring substantial expenses to develop any of our products, our business would suffer.

Our customers require our products and our third-party contractors to undergo a lengthy and expensive qualification process which does not assure product sales. If we are unsuccessful in or delayed in qualifying any of our products with a customer, our business and operating results would suffer.

Prior to purchasing our products, our customers require that both our products and our third-party contractors undergo extensive qualification processes, which involve testing of our products in the customers' systems, as well as testing for reliability. This qualification process may continue for several months. However, qualification of a product by a customer does not assure any sales of the product to that customer. Even after successful qualification and sales of a product to a customer, a subsequent revision in our third party contractors' manufacturing process or our selection of a new supplier may require a new qualification process with our customers, which may result in delays and in our holding excess or obsolete inventory. After our products are qualified, it can take several months or more before the customer commences volume production of components or systems that incorporate our products. Despite these uncertainties, we devote substantial resources, including design, engineering, sales, marketing and management efforts, to qualifying our products with customers in anticipation of sales. If we are unsuccessful or delayed in qualifying any of our products with a customer, sales of those products to the customer may be precluded or delayed, which may impede our growth and cause our business to suffer.

The complexity of our products could result in undetected defects and we may be subject to warranty claims and product liability, which could result in a decrease in customers and revenue, unexpected expenses and loss of market share. In addition, our product liability insurance may not adequately cover our costs arising from products defects or otherwise.

Our products are sold as components or as modules for use in larger electronic equipment sold by our customers. A product usually goes through an intense qualification and testing period performed by our customers before being used in production. We primarily outsource our product testing to third parties and also perform some testing in our Westlake Village, California, facility. We inspect and test parts, or have them inspected and tested in order to screen out parts that may be weak or potentially suffer a defect incurred through the manufacturing process. From time to time, we are subject to warranty or product liability claims that may require us to make significant expenditures to defend these claims or pay damage awards.

Generally, our agreements seek to limit our liability to the replacement of the part or to the revenue received for the product, but these limitations on liability may not be effective or sufficient in scope in all cases. If a customer's equipment fails in use, the customer may incur significant monetary damages including an equipment recall or associated replacement expenses, as well as lost revenue. The customer may claim that a defect in our product caused the equipment failure and assert a claim against us to recover monetary damages. The process of identifying a defective or potentially defective product in systems that have been widely distributed may be lengthy and require significant resources. We may test the affected product to determine the root cause of the problem and to determine appropriate

solutions. We may find an appropriate solution or a temporary fix while a permanent solution is being determined. If we are unable to determine the root cause, find an appropriate solution or offer a temporary fix, we may delay shipment to customers. As a result, we may incur significant replacement costs and contract damage claims from our customers as well as harm to our reputation. In certain situations, circumstances might warrant that we consider incurring the costs or expense related to a recall of one of our products in order to avoid the potential claims that may be raised should the customer reasonably rely upon our product only to suffer a failure due to a design or manufacturing process defect. Defects in our products could harm our relationships with our customers and damage our reputation. Customers may be reluctant to buy our products, which could harm our ability to retain existing customers and attract new customers and our financial results. In addition, the cost of defending these claims and satisfying any arbitration award or judicial judgment with respect to these claims could harm our business prospects and financial condition. Although we carry product liability insurance, this insurance may not adequately cover our costs arising from defects in our products or otherwise.

We rely on our relationships with industry and technology leaders to enhance our product offerings and our inability to continue to develop or maintain such relationships in the future would harm our ability to remain competitive.

We develop many of our semiconductor products for applications in systems that are driven by industry and technology leaders in the communications and computing markets. We also work with OEMs, system manufacturers and standards bodies to define industry conventions and standards within our target markets. We believe these relationships enhance our ability to achieve market acceptance and widespread adoption of our products. If we are unable to continue to develop or maintain these relationships, our semiconductor solutions would become less desirable to our customers, our sales would suffer and our competitive position could be harmed.

If we fail to accurately anticipate and respond to market trends or fail to develop and introduce new or enhanced products to address these trends on a timely basis, our ability to attract and retain customers could be impaired and our competitive position could be harmed.

We operate in industries characterized by rapidly changing technologies and industry standards as well as technological obsolescence. We have developed products that may have long product life cycles of 10 years or more, as well as other products in more volatile high growth or rapidly changing areas, which may have shorter life cycles of only two to three years. We believe that our future success depends on our ability to develop and introduce new technologies and products that generate new sources of revenue to replace, or build upon, existing product revenue streams that may be dependent upon limited product life cycles. If we are not able to repeatedly introduce, in successive years, new products that ship in volume, our revenue will likely not grow and may decline significantly and rapidly. In 2009, we successfully introduced and began to ship a new product in production which we identify as product number INSSTE32882-GS04, or the GS04 product, and which consists of an integrated PLL and register buffer. Sales of the GS04 product comprised 18% of our total revenue in 2010. In 2010, we also began to ship in production volume a "low voltage" version of our integrated PLL and register buffer, which is shipping in the form of product number INSSTE32882LV-GS02, or the GS02 product. Sales of the GS02 product comprised 38% and 32% of our total revenue in 2011 and 2010, respectively. In 2011, we began to ship in production volume a new "ultra-low voltage" version of our integrated PLL and register buffer, which is shipping in the form of product number INSSTE32882UV-GS02, or the GS02UV product. Sales of the GS02UV product comprised 15%, 39% and 45% of our total revenue in 2014, 2013 and 2012, respectively. In 2010, we introduced and began to ship in commercial volume a dual, differential linear transimpedance amplifier that we identify as product number 2850TA-SO1D. Sales of 2850TA-SO1D product comprised 10% and 14% of our total revenue in 2013 and 2012, respectively. In 2012, we introduced and began to ship in commercial volume a dual, differential input linear transimpedance/variable-gain amplifier that we identify as product number IN3250TA-SO2D. Sales of IN3250TA-SO2D product comprised 14% of our total revenue in 2015 and 2014, respectively. There were no other products that generated more than 10% of our total revenue in 2015, 2014 or 2013.

The GS02UV, GS02 and GS04 products matured in 2014, 2012 and 2011, respectively and as a result, sales of these products declined and were supplanted in part by newer parts which we developed. This underscores the importance of the need for us to continually develop and introduce new products to diversify our revenue base as well as generate new revenue to replace and build upon the success of previously introduced products which may be rapidly maturing.

To compete successfully, we must design, develop, market and sell new or enhanced products that provide increasingly higher levels of performance and reliability while meeting the cost expectations of our customers. The introduction of new products by our competitors, the delay or cancellation of a platform for which any of our semiconductor solutions are designed, the market acceptance of products based on new or alternative technologies or the emergence of new industry standards could render our existing or future products uncompetitive from a pricing standpoint, obsolete and otherwise unmarketable. Our failure to anticipate or timely develop new or enhanced products or technologies in response to technological shifts could result in decreased revenue and our competitors winning design wins. In particular, we may experience difficulties with product design, manufacturing, marketing or certification that could delay or prevent our development, introduction or marketing of new or enhanced products. Although we believe our products are fully compliant with applicable industry standards, proprietary enhancements may not in the future result in full conformance with existing industry standards under all circumstances. Due to the interdependence of various components in the systems within which our products and the products of our competitors operate, customers are unlikely to change to another design, once adopted, until the next generation of a technology. As a result, if we fail to introduce new or enhanced products that meet the needs of our customers or penetrate new markets in a timely fashion, and our designs do not gain acceptance, we will lose market share and our competitive position, very likely on an extended basis, and operating results will be adversely affected.

If sufficient market demand for 100G solutions does not develop or develops more slowly than expected, or if we fail to accurately predict market requirements or market demand for 100G solutions, our business, competitive position and operating results would suffer.

We are currently investing significant resources to develop semiconductor solutions supporting 100G data transmission rates in order to increase the number of such solutions in our product line. If we fail to accurately predict market requirements or market demand for 100G semiconductor solutions, or if our 100G semiconductor solutions are not successfully developed or competitive in the industry, our business will suffer. If 100G networks are deployed to a lesser extent or more slowly than we currently anticipate, we may not realize any benefits from our investment. As a result, our business, competitive position, market share and operating results would suffer.

Our target markets may not grow or develop as we currently expect and are subject to market risks, any of which could materially harm our business, revenue and operating results.

To date, a substantial portion of our revenue has been attributable to demand for our products in the communications and computing markets and the growth of these overall markets. These markets have fluctuated in size and growth in recent times. Our operating results are impacted by various trends in these markets. These trends include the deployment and broader market adoption of next generation technologies, such as 100G and 100Gbe CMOS CDR and Serdes, in communications and enterprise networks, timing of next generation network upgrades, the introduction and broader market adoption of next generation server platforms, timing of enterprise upgrades and the introduction and deployment of high-speed memory interfaces in computing platforms. We are unable to predict the timing or direction of the development of these markets with any accuracy. In addition, because some of our products are not limited in the systems or geographic areas in which they may be deployed, we cannot always determine with accuracy how, where or into which applications our products are being deployed. If our target markets do not grow or develop in ways that we currently expect, demand for our semiconductor products may decrease and our business and operating results could suffer.

We rely on a limited number of third parties to manufacture, assemble and test our products, and the failure to manage our relationships with our third-party contractors successfully could adversely affect our ability to market and sell our products and our reputation. Our revenue and operating results would suffer if these third parties fail to deliver products or components in a timely manner and at reasonable cost or if manufacturing capacity is reduced or eliminated as we may be unable to obtain alternative manufacturing capacity.

We operate an outsourced manufacturing business model. As a result, we rely on third-party foundry wafer fabrication and assembly and test capacity. We also perform testing in our Westlake Village, California, facility. We generally use a single foundry for the production of each of our various semiconductors. Currently, our principal foundries are Global Unichip, SEDI, TSMC, TowerJazz Semiconductor Ltd., and WIN Semiconductors. We also use third-party contract manufacturers for a significant majority of our assembly and test operations, including Kyocera, OSE, ASE, Presto, EAG, AIC and STATS ChipPAC.

Relying on third-party manufacturing, assembly and testing presents significant risks to us, including the following:

- failure by us, our customers or their end customers to qualify a selected supplier;
- capacity shortages during periods of high demand;
- reduced control over delivery schedules and quality;
- shortages of materials;
- misappropriation of our intellectual property;
- limited warranties on wafers or products supplied to us; and
- potential increases in prices.

The ability and willingness of our third-party contractors to perform is largely outside our control. If one or more of our contract manufacturers or other outsourcers fails to perform its obligations in a timely manner or at satisfactory quality levels, our ability to bring products to market and our reputation could suffer. For example, if that manufacturing capacity is reduced or eliminated at one or more facilities, including as a response to the recent worldwide decline in the semiconductor industry, or any of those facilities are unable to keep pace with the growth of our business, we could have difficulties fulfilling our customer orders and our revenue could decline. In addition, if these third parties fail to deliver quality products and components on time and at reasonable prices, we could have difficulties fulfilling our customer orders, our revenue could decline and our business, financial condition and results of operations would be adversely affected.

Additionally, as many of our fabrication and assembly and test contractors are located in the Pacific Rim region, principally in Taiwan, our manufacturing capacity may be similarly reduced or eliminated due to natural disasters, political unrest, war, labor strikes, work stoppages or public health crises, such as outbreaks of H1N1 flu. This could cause significant delays in shipments of our products until we

are able to shift our manufacturing, assembly or test from the affected contractor to another third-party vendor. There can be no assurance that alternative capacity could be obtained on favorable terms, if at all.

Our costs may increase substantially if the wafer foundries that supply our products do not achieve satisfactory product yields or quality.

The wafer fabrication process is an extremely complicated process where the slightest changes in the design, specifications or materials can result in material decreases in manufacturing yields or even the suspension of production. From time to time, our third-party wafer foundries have experienced, and are likely to experience, manufacturing defects and reduced manufacturing yields related to errors or problems in their manufacturing processes or the interrelationship of their processes with our designs. In some cases, our third-party wafer foundries may not be able to detect these defects early in the fabrication process or determine the cause of such defects in a timely manner. We may incur substantial research and development expense for prototype or development stage products as we qualify the products for production.

Generally, in pricing our semiconductors, we assume that manufacturing yields will continue to increase, even as the complexity of our semiconductors increases. Once our semiconductors are initially qualified with our third-party wafer foundries, minimum acceptable yields are established. We are responsible for the costs of the wafers if the actual yield is above the minimum. If actual yields are below the minimum we are not required to purchase the wafers. The minimum acceptable yields for our new products are generally lower at first and increase as we achieve full production. Unacceptably low product yields or other product manufacturing problems could substantially increase the overall production time and costs and adversely impact our operating results on sales of our products. Product yield losses will increase our costs and reduce our gross margin. In addition to significantly harming our operating results and cash flow, poor yields may delay shipment of our products and harm our relationships with existing and potential customers.

We do not have any long-term supply contracts with our contract manufacturers or suppliers, and any disruption in our supply of products or materials could have a material adverse effect on our business, revenue and operating results.

We currently do not have long-term supply contracts with any of our third-party contract manufacturers. We make substantially all of our purchases on a purchase order basis, and our contract manufacturers are not required to supply us products for any specific period or in any specific quantity. We expect that it would take approximately nine to 12 months to transition from our current foundry or assembly services to new providers. Such a transition would likely require a qualification process by our customers or their end customers. We generally place orders for products with some of our suppliers several months prior to the anticipated delivery date, with order volumes based on our forecasts of demand from our customers. Accordingly, if we inaccurately forecast demand for our products, we may be unable to obtain adequate and cost-effective foundry or assembly capacity from our third-party contractors to meet our customers' delivery requirements, or we may accumulate excess inventories. On occasion, we have been unable to adequately respond to unexpected increases in customer purchase orders and therefore, were unable to benefit from this incremental demand. None of our third-party contract manufacturers have provided any assurance to us that adequate capacity will be available to us within the time required to meet additional demand for our products.

Our foundry vendors and assembly and test vendors may allocate capacity to the production of other companies' products while reducing deliveries to us on short notice. In particular, other customers that are larger and better financed than us or that have long-term agreements with our foundry vendor or assembly and test vendors may cause our foundry vendor or assembly and test vendors to reallocate capacity to those customers, decreasing the capacity available to us. We do not have long-term supply contracts with our third-party contract manufacturers and if we enter into costly arrangements with suppliers that include nonrefundable deposits or loans in exchange for capacity commitments, commitments to purchase specified quantities over extended periods or investment in a foundry, our operating results could be harmed. We may not be able to make any such arrangement in a timely fashion or at all, and any arrangements may be costly, reduce our financial flexibility, and not be on terms favorable to us. Moreover, if we are able to secure foundry capacity, we may be obligated to use all of that capacity or incur penalties. These penalties may be expensive and could harm our financial results. To date, we have not entered into such arrangements with our suppliers. If we need another foundry or assembly and test subcontractor because of increased demand, or if we are unable to obtain timely and adequate deliveries from our providers, we might not be able to cost effectively and quickly retain other vendors to satisfy our requirements.

Many of our customers depend on us as the sole source for a number of our products. If we are unable to deliver these products as the sole supplier or as one of a limited number of suppliers, our relationships with these customers and our business would suffer.

A number of our customers do not have alternative sources for our semiconductor solutions and depend on us as the sole supplier or as one of a limited number of suppliers for these products. Since we outsource our manufacturing to third- party contractors, our ability to deliver our products is substantially dependent on the ability and willingness of our third- party contractors to perform, which is largely outside our control. A failure to deliver our products in sufficient quantities or at all to our customers that depend on us as a sole supplier or as one of a limited number of suppliers may be detrimental to their business and, as a result, our relationship with the customer would be negatively impacted. If we are unable to maintain our relationships with these customers after such failure, our business and financial results may be harmed.

If we are unable to attract, train and retain qualified personnel, particularly our design and technical personnel, we may not be able to execute our business strategy effectively.

Our future success depends on our ability to attract and retain qualified personnel, including our management, sales and marketing, and finance, and particularly our design and technical personnel. We do not know whether we will be able to retain all of these personnel as we continue to pursue our business strategy. Historically, we have encountered difficulties in hiring qualified engineers because there is a limited pool of engineers with the expertise required in our field. Competition for these personnel is intense in the semiconductor industry. As the source of our technological and product innovations, our design and technical personnel represent a significant asset. The loss of the services of one or more of our key employees, especially our key design and technical personnel, or our inability to attract and retain qualified design and technical personnel, could harm our business, financial condition and results of operations.

We may not be able to effectively manage our growth, and we may need to incur significant expenditures to address the additional operational and control requirements of our growth, either of which could harm our business and operating results.

To effectively manage our growth, we must continue to expand our operational, engineering and financial systems, procedures and controls and to improve our accounting and other internal management systems. This may require substantial managerial and financial resources, and our efforts in this regard may not be successful. Our current systems, procedures and controls may not be adequate to support our future operations. If we fail to adequately manage our growth, or to improve our operational, financial and management information systems, or fail to effectively motivate or manage our new and future employees, the quality of our products and the management of our operations could suffer, which could adversely affect our operating results.

We face intense competition and expect competition to increase in the future. If we fail to compete effectively, it could have an adverse effect on our revenue, revenue growth rate, if any, and market share.

The global semiconductor market in general, and the communications and computing markets in particular, are highly competitive. We compete or plan to compete in different target markets to various degrees on the basis of a number of principal competitive factors, including product performance, power budget, features and functionality, customer relationships, size, ease of system design, product roadmap, reputation and reliability, customer support and price. We expect competition to increase and intensify as more and larger semiconductor companies enter our markets. Increased competition could result in price pressure, reduced profitability and loss of market share, any of which could materially and adversely affect our business, revenue and operating results.

Currently, our competitors range from large, international companies offering a wide range of semiconductor products to smaller companies specializing in narrow markets. Our primary competitors include Avago Technologies Ltd., Broadcom Corporation, GigOptix, Inc., Integrated Device Technology, Inc., M/A-COM Technology Solutions Inc., Maxlinear, Inc., Microsemi Corporation, Montage Technology Group Limited, PMC-Sierra, Inc., Qorvo, Inc., Semtech Corp. and Texas Instruments Incorporated as well as other analog signal processing companies. We expect competition in the markets in which we participate to increase in the future as existing competitors improve or expand their product offerings.

Our ability to compete successfully depends on elements both within and outside of our control, including industry and general economic trends. During past periods of downturns in our industry, competition in the markets in which we operate intensified as our customers reduced their purchase orders. Many of our competitors have substantially greater financial and other resources with which to withstand similar adverse economic or market conditions in the future. These developments may materially and adversely affect our current and future target markets and our ability to compete successfully in those markets.

We use a significant amount of intellectual property in our business. Monitoring unauthorized use of our intellectual property can be difficult and costly and if we are unable to protect our intellectual property, our business could be adversely affected.

Our success depends in part upon our ability to protect our intellectual property. To accomplish this, we rely on a combination of intellectual property rights, including patents, copyrights, trademarks and trade secrets in the United States and in selected foreign countries where we believe filing for such protection is appropriate. Effective protection of our intellectual property rights may be unavailable, limited or not applied for in some countries. Some of our products and technologies are not covered by any patent or patent application, as we do not believe patent protection of these products and technologies is critical to our business strategy at this time. A failure to timely seek patent protection on products or technologies generally precludes us from seeking future patent protection on these products or technologies. We cannot guarantee that:

- any of our present or future patents or patent claims will not lapse or be invalidated, circumvented, challenged or abandoned;
- our intellectual property rights will provide competitive advantages to us;
- our ability to assert our intellectual property rights against potential competitors or to settle current or future disputes will not be limited by our agreements with third parties;
- any of our pending or future patent applications will be issued or have the coverage originally sought;

- our intellectual property rights will be enforced in jurisdictions where competition may be intense or where legal protection may be weak;
- any of the trademarks, copyrights, trade secrets or other intellectual property rights that we presently employ in our business will not lapse or be invalidated, circumvented, challenged or abandoned; or
- we will not lose the ability to assert our intellectual property rights against or to license our technology to others and collect royalties or other payments.

In addition, our competitors or others may design around our protected patents or technologies. Effective intellectual property protection may be unavailable or more limited in one or more relevant jurisdictions relative to those protections available in the United States, or may not be applied for in one or more relevant jurisdictions. If we pursue litigation to assert our intellectual property rights, an adverse decision in any of these legal actions could limit our ability to assert our intellectual property rights, limit the value of our technology or otherwise negatively impact our business, financial condition and results of operations.

Monitoring unauthorized use of our intellectual property is difficult and costly. Unauthorized use of our intellectual property may have occurred or may occur in the future. Although we have taken steps to minimize the risk of this occurring, any such failure to identify unauthorized use and otherwise adequately protect our intellectual property would adversely affect our business. Moreover, if we are required to commence litigation, whether as a plaintiff or defendant, not only would this be time-consuming, but we would also be forced to incur significant costs and divert our attention and efforts of our employees, which could, in turn, result in lower revenue and higher expenses.

We also rely on contractual protections with our customers, suppliers, distributors, employees and consultants, and we implement security measures designed to protect our trade secrets. We cannot be sure that these contractual protections and security measures will not be breached, that we will have adequate remedies for any such breach or that our suppliers, employees or consultants will not assert rights to intellectual property arising out of such contracts.

In addition, we have a number of third-party patent and intellectual property license agreements. Some of these license agreements require us to make one-time payments or ongoing royalty payments. We cannot guarantee that the third- party patents and technology we license will not be licensed to our competitors or others in the semiconductor industry. In the future, we may need to obtain additional licenses, renew existing license agreements or otherwise replace existing technology. We are unable to predict whether these license agreements can be obtained or renewed or the technology can be replaced on acceptable terms, or at all.

Average selling prices of our products generally decrease over time, which could negatively impact our revenue and gross margins.

Our operating results may be impacted by a decline in the average selling prices of our semiconductors. If competition increases in our target markets, we may need to reduce the average unit price of our products in anticipation of competitive pricing pressures, new product introductions by us or our competitors and for other reasons. If we are unable to offset any reductions in our average selling prices by increasing our sales volumes or introducing new products with higher margins, our revenue and gross margins will suffer. To maintain our revenue and gross margins, we must develop and introduce new products and product enhancements on a timely basis and continually reduce our costs as well as our customers' costs. Failure to do so would cause our revenue and gross margins to decline.

We are subject to order and shipment uncertainties, and differences between our estimates of customer demand and product mix and our actual results could negatively affect our inventory levels, sales and operating results.

Our revenue is generated on the basis of purchase orders with our customers rather than long-term purchase commitments. In addition, our customers can cancel purchase orders or defer the shipments of our products under certain circumstances. Our products are manufactured using semiconductor foundries according to our estimates of customer demand, which requires us to make separate demand forecast assumptions for every customer, each of which may introduce significant variability into our aggregate estimates. It is difficult for us to forecast the demand for our products, in part because of the complex supply chain between us and the end-user markets that incorporate our products. Due to our lengthy product development cycle, it is critical for us to anticipate changes in demand for our various product features and the applications they serve to allow sufficient time for product development and design. We have limited visibility into future customer demand and the product mix that our customers will require, which could adversely affect our revenue forecasts and operating margins. Moreover, because some of our target markets are relatively new, many of our customers have difficulty accurately forecasting their product requirements and estimating the timing of their new product introductions, which ultimately affects their demand for our products. Our failure to accurately forecast demand can lead to product shortages that can impede production by our customers and harm our customer relationships. Conversely, our failure to forecast declining demand or shifts in product mix can result in excess or obsolete inventory. For example, some of our customers may cancel purchase orders or delay the shipment of their products that incorporate our products as a result of component shortages they may experience due to the earthquakes and tsunami in Japan, or likewise with respect to the flooding in Thailand, which may result in excess or obsolete inventory and impact our sales and operating results. In addition, the rapid pace of innovation in our industry could also render significant portions of our inventory obsolete. Excess or obsolete inventory levels could result in unexpected expenses or increases in our reserves that could adversely affect our business, operating results and financial condition. In contrast, if we were to underestimate customer demand or if sufficient manufacturing capacity were unavailable, we could forego revenue opportunities, potentially lose market share and damage our customer relationships. In addition, any significant future

cancellations or deferrals of product orders or the return of previously sold products due to manufacturing defects could materially and adversely impact our profit margins, increase our write-offs due to product obsolescence and restrict our ability to fund our operations.

We rely on third-party sales representatives and distributors to assist in selling our products. If we fail to retain or find additional sales representatives and distributors, or if any of these parties fail to perform as expected, it could reduce our future sales.

In 2015, we derived 78% of our total revenue from sales by our direct sales team and third-party sales representatives and approximately 22% of our sales were made through third-party distributors. In 2014 and 2013, we derived 84% of our total revenue from sales by our direct sales team and third-party sales representatives. In addition, in 2014 and 2013, approximately 16% of our sales were made through third- party distributors, respectively. Two of our distributors, which sell solely to Micron, accounted for 11% our total revenue in 2013. We are unable to predict the extent to which these third-party sales representatives and distributors will be successful in marketing and selling our products. Moreover, many of these third-party sales representatives and distributors also market and sell competing products, which may affect the extent to which they promote our products. Even where our relationships are formalized in contracts, our third-party sales representatives and distributors often have the right to terminate their relationships with us at any time. Our future performance will also depend, in part, on our ability to attract additional third- party sales representatives and distributors who will be able to market and support our products effectively, especially in markets in which we have not previously sold our products. If we cannot retain our current distributors or find additional or replacement third-party sales representatives and distributors, our business, financial condition and results of operations could be harmed. Additionally, if we terminate our relationship with a distributor, we may be obligated to repurchase unsold products. We record a reserve for estimated returns and price credits. If actual returns and credits exceed our estimates, our operating results could be harmed.

The facilities of our third-party contractors and distributors are located in regions that are subject to earthquakes and other natural disasters.

The facilities of our third-party contractors and distributors are subject to risk of catastrophic loss due to fire, flood or other natural or man-made disasters. A number of our facilities and those of our contract manufacturers are located in areas with above average seismic activity and also subject to typhoons and other Pacific storms. Several foundries that manufacture our wafers are located in Taiwan, Japan and California, and a majority of our third-party contractors who assemble and test our products are located in Asia. In addition, our headquarters are located in California. The risk of an earthquake in the Pacific Rim region or California is significant due to the proximity of major earthquake fault lines. Any catastrophic loss to any of these facilities would likely disrupt our operations, delay production, shipments and revenue and result in significant expenses to repair or replace the facility. In particular, any catastrophic loss at our California locations would materially and adversely affect our business.

We rely on third-party technologies for the development of our products and our inability to use such technologies in the future would harm our ability to remain competitive.

We rely on third parties for technologies that are integrated into our products, such as wafer fabrication and assembly and test technologies used by our contract manufacturers, as well as licensed architecture technologies. If we are unable to continue to use or license these technologies on reasonable terms, or if these technologies fail to operate properly, we may not be able to secure alternatives in a timely manner or at all, and our ability to remain competitive would be harmed. In addition, if we are unable to successfully license technology from third parties to develop future products, we may not be able to develop such products in a timely manner or at all.

Our business would be adversely affected by the departure of existing members of our senior management team and other key personnel.

Our success depends, in large part, on the continued contributions of our senior management team, in particular, the services of certain key personnel, including Dr. Loi Nguyen, one of our founders and our Senior Vice President of Optical Interconnect. Changes in our management team could negatively affect our operations and our relationships with our customers, employees and market leaders. In addition, we have not entered into non-compete agreements with members of our senior management team. The loss of any member of our senior management team or key personnel could harm our ability to implement our business strategy and respond to the rapidly changing market conditions in which we operate.

We may acquire other businesses, form joint ventures or make investments in other companies or technologies that disrupt our business, be difficult to integrate, impair our operating results, dilute our stockholders' ownership, increase our debt, divert management resources or cause us to incur significant expense.

As part of our business strategy, we have pursued and may continue to pursue in the future acquisitions of businesses and assets, as well as technology licensing arrangements that we believe will complement our business, semiconductor solutions or technologies. We also may pursue strategic alliances that leverage our core technology and industry experience to expand our product offerings or distribution, or make investments in other companies. Any acquisition involves a number of risks, many of which could harm our business, including:

- difficulty in integrating the operations, technologies, products, existing contracts, accounting and personnel of the target company or business;

- realizing the anticipated benefits of any acquisition;
- difficulty in transitioning and supporting customers, if any, of the target company;
- diversion of financial and management resources from existing operations;
- the risk that the price we pay or other resources that we devote may exceed the value we realize, or the value we could have realized if we had allocated the purchase price or other resources to another opportunity;
- potential loss of key employees, customers and strategic alliances from either our current business or the target company's business;
- assumption of unanticipated problems or latent liabilities, such as problems with the quality of the acquired products;
- inability to generate sufficient revenue to offset acquisition costs;
- dilutive effect on our stock as a result of any equity-based acquisitions;
- inability to successfully complete transactions with a suitable acquisition candidate; and
- in the event of international acquisitions, risks associated with accounting and business practices that are different from applicable U.S. practices and requirements.

Acquisitions also frequently result in the recording of goodwill and other intangible assets that are subject to potential impairments, which could harm our financial results. As a result, if we fail to properly evaluate acquisitions or investments, it may impair our ability to achieve the anticipated benefits of any such acquisitions or investments, and we may incur costs in excess of what we anticipate. The failure to successfully evaluate and execute acquisitions or investments or otherwise adequately address these risks could materially harm our business and financial results.

To finance any acquisitions or investments, we may choose to issue shares of our common stock or convertible debt as consideration, which could dilute the ownership of our stockholders. If the price of our common stock is low or volatile, we may not be able to acquire other companies for stock. In addition, newly-issued securities may have rights, preferences or privileges senior to those of existing stockholders. If we raise additional funds by obtaining loans from third parties, the terms of those financing arrangements may include negative covenants or other restrictions on our business that could impair our operating flexibility, and would also require us to incur interest expense. Additional funds may not be available on terms that are favorable to us, or at all.

Our portfolio of marketable securities is significant and subject to market, interest and credit risk that may reduce its value.

We maintain a significant portfolio of marketable securities. Changes in the value of this portfolio could adversely affect our earnings. In particular, the value of our investments may decline due to increases in interest rates, downgrades of money market funds, U.S. Treasuries, municipal bonds, corporate bonds, certificates of deposit and asset backed securities included in our portfolio, instability in the global financial markets that reduces the liquidity of securities included in our portfolio, declines in the value of collateral underlying the asset-backed securities included in our portfolio and other factors. Each of these events may cause us to record charges to reduce the carrying value of our investment portfolio or sell investments for less than our acquisition cost. Although we attempt to mitigate these risks by investing in high quality securities and continuously monitoring our portfolio's overall risk profile, the value of our investments may nevertheless decline.

Tax benefits that we receive may be terminated or reduced in the future, which would increase our costs.

We continue to expand our international presence to take advantage of the opportunity to recruit additional engineering design talent, as well as to more closely align our operations geographically with our customers and suppliers in Asia. In certain international jurisdictions, we have also entered into agreements with local governments to provide us with, among other things, favorable local tax rates if certain minimum criteria are met. These agreements may require us to meet several requirements as to investment, headcount and activities to retain this status. We currently believe that we will be able to meet all the terms and conditions specified in these agreements. However, if adverse changes in the economy or changes in technology affect international demand for our products in an unforeseen manner or if we fail to otherwise meet the conditions of the local agreements, we may be subject to additional taxes, which in turn would increase our costs.

Changes in our effective tax rate may harm our results of operations. A number of factors may increase our future effective tax rates, including:

- the jurisdictions in which profits are determined to be earned and taxed;
- the resolution of issues arising from tax audits with various tax authorities;

- changes in the measurement of our deferred tax assets and liabilities and in deferred tax valuation allowances;
- changes in the value of assets or services transferred or provided from one jurisdiction to another;
- adjustments to income taxes upon finalization of various tax returns;
- increases in expenses not deductible for tax purposes, including write-offs of acquired in-process research and development and impairments of goodwill in connection with acquisitions;
- changes in available tax credits;
- changes in tax laws or the interpretation of such tax laws, and changes in U.S. generally accepted accounting principles; and
- a decision to repatriate non-U.S. earnings for which we have not previously provided for U.S. taxes.

We are subject to regulatory compliance requirements, including Section 404 of the Sarbanes-Oxley Act of 2002, which are costly to comply with, and our failure to comply with these requirements could harm our business and operating results.

As a public company, we incur significant legal, accounting and other expenses related to compliance with laws such as Section 404 of the Sarbanes-Oxley Act of 2002. Compliance with Section 404 requires that our management report on, and our independent registered public accounting firm attest to, the effectiveness of our internal control over financial reporting in our annual reports on Form 10-K. Section 404 compliance has in the past diverted, and may continue to divert, internal resources, and require a significant amount of time and effort. If we fail to comply with Section 404, or if in the future our Chief Executive Officer, Chief Financial Officer or independent registered public accounting firm determines that our internal control over financial reporting is not effective, we could be subject to sanctions or investigations by The New York Stock Exchange, or NYSE, the Securities and Exchange Commission, or the SEC, or other regulatory authorities.

Furthermore, investor perceptions of our company may suffer, and this could cause a decline in the market price of our stock. Irrespective of compliance with Section 404, any failure of our internal controls could have a material adverse effect on our stated results of operations and harm our reputation.

The conditional conversion feature of our convertible senior notes, if triggered, may adversely affect our financial condition and operating results.

In the event the conditional conversion feature of our convertible senior notes is triggered, holders of notes will be entitled to convert the notes at any time during specified periods at their option. If one or more holders elect to convert their notes, unless we elect to satisfy our conversion obligation by delivering solely shares of our common stock (other than paying cash in lieu of delivering any fractional share), we would be required to settle a portion or all of our conversion obligation through the payment of cash, which could adversely affect our liquidity. In addition, even if holders do not elect to convert their notes, we could be required under applicable accounting rules to reclassify all or a portion of the outstanding principal of the notes as a current rather than long-term liability, which would result in a material reduction of our net working capital.

The accounting method for convertible debt securities that may be settled in cash, such as the notes, could have a material effect on our reported financial results.

Under Accounting Standards Codification 470-20, Debt with Conversion and Other Options, which we refer to as ASC 470-20, an entity must separately account for the liability and equity components of the convertible debt instruments (such as the notes) that may be settled entirely or partially in cash upon conversion in a manner that reflects the issuer's economic interest cost. The effect of ASC 470-20 on the accounting for the notes is that the equity component is required to be included in the additional paid-in capital section of stockholders' equity on our consolidated balance sheet, and the value of the equity component would be treated as debt discount for purposes of accounting for the debt component of the notes. As a result, we are required to record a greater amount of non-cash interest expense in current periods presented as a result of the amortization of the discounted carrying value of the notes to their face amount over the term of the notes. We will report lower net income in our financial results because ASC 470-20 will require interest to include both the current period's amortization of the debt discount and the instrument's non-convertible interest rate, which could adversely affect our reported or future financial results, the trading price of our common stock and the trading price of the notes.

In addition, under certain circumstances, convertible debt instruments (such as the notes) that may be settled entirely or partly in cash are currently accounted for utilizing the treasury stock method, the effect of which is that the shares issuable upon conversion of the notes are not included in the calculation of diluted earnings per share except to the extent that the conversion value of the notes exceeds their principal amount. Under the treasury stock method, for diluted earnings per share purposes, the transaction is accounted for as if the number of shares of common stock that would be necessary to settle such excess, if we elected to settle such excess in shares, are issued. We cannot be sure that the accounting standards in the future will continue to permit the use of the treasury stock method. If we are unable to use the treasury stock method in accounting for the shares issuable upon conversion of the notes, then our diluted earnings per share would be adversely affected.

We are leveraged financially, which could adversely affect our ability to adjust our business to respond to competitive pressures and to obtain sufficient funds to satisfy our future growth, business needs and development plans.

We have substantial existing indebtedness. In December 2015, we issued $230.0 million aggregate principal amount of convertible senior notes. The degree to which we are leveraged could have negative consequences, including, but not limited to, the following:

- we may be more vulnerable to economic downturns, less able to withstand competitive pressures and less flexible in responding to changing business and economic conditions;
- our ability to obtain additional financing in the future for working capital, capital expenditures, acquisitions, general corporate or other purposes may be limited;
- a substantial portion of our cash flows from operations in the future may be required for the payment of the principal amount of our existing indebtedness when it becomes due; and
- we may elect to make cash payments upon any conversion of the convertible notes, which would reduce our cash on hand.

Our ability to meet our payment obligations under our convertible notes depends on our ability to generate significant cash flow in the future. This, to some extent, is subject to general economic, financial, competitive, legislative, and regulatory factors as well as other factors that are beyond our control. There can be no assurance that our business will generate cash flow from operations, or that additional capital will be available to us, in an amount sufficient to enable us to meet our debt payment obligations and to fund other liquidity needs. If we are unable to generate sufficient cash flow to service our debt obligations, we may need to refinance or restructure our debt, sell assets, reduce or delay capital investments, or seek to raise additional capital. If we were unable to implement one or more of these alternatives, we may be unable to meet our debt payment obligations, which could have a material adverse effect on our business, results of operations, or financial condition.

Risks Related to the Cortina Acquisition

We may not realize the anticipated benefits of our acquisition of Cortina, which in turn could harm our business and operating results.

We may not achieve all of the anticipated benefits of our acquisition of Cortina's high-speed interconnect and optical transport business due to a number of factors including: unanticipated costs or liabilities associated with the acquisition, incurrence of acquisition-related costs, harm to our relationships with existing customers as a result of the acquisition, harm to our brands and reputation, the loss of key Cortina employees, and the use of resources that are needed in other parts of our business. Finally, the acquisition could result in significant goodwill impairment charges, amortization expenses for other intangible assets and exposure to potential unknown liabilities. For example, during the year ended December 31, 2015, we abandoned a project related to in-process research and development and recorded an impairment charge of $1.8 million. We may incur additional charges, expenses and costs in the future, which may in turn have a material adverse effect on our results of operations.

Our business, particularly the high-speed interconnect and optical transport business, is dependent on capital expenditures by service providers, and any downturn that they experience could negatively impact our business.

Our business, particularly the high-speed interconnect and optical transport business we acquired in connection with our acquisition of Cortina, depends on continued capital expenditures by service providers and is subject to the cyclicality of such expenditures. Our communications semiconductor products are sold primarily to network equipment vendors that in turn sell their equipment to service providers. If the demand for our customers' products declines or fails to increase, as a result of lower capital expenditures by service providers or any other factors, demand for our products will be similarly affected. The global economic downturn caused a significant reduction in capital spending on communications network equipment. While we are beginning to see improvement, there are no guarantees that this growth will continue, which could result in market volatility or another downturn. If there is another downturn, our business, operating results and financial condition may be materially harmed.

Cortina's high-speed interconnect and optical transport business has historically relied on a small number of key customers for a substantial portion of its revenue, and the loss of one or more of these key customers or the diminished demand for these products from one or more such key customers could negatively affect our ability to realize the anticipated benefits of our acquisition of Cortina.

A small number of customers have historically accounted for a substantial portion of Cortina's revenues from its high-speed interconnect and optical transport business in any particular period. We anticipate that our relationships with these key customers will continue to be important to this business, and we expect that this customer concentration will increase in the future. We have no long-term volume purchase commitments from our key customers. These customers may decide not to purchase our products at all, may purchase fewer products than they did in the past or may otherwise alter their purchasing patterns. Reductions, delays and cancellation of orders from our key customers or the loss of one or more key customers would significantly reduce our revenue and profits.

The failure of our distributors to perform as expected could materially reduce our future revenue or negatively impact our reported financial results.

Cortina's high-speed interconnect and optical transport business has historically relied on a number of distributors, in particular Arrow Electronics, Inc. and Dragon Technology Distribution (HK) Limited, to help generate customer demand, provide technical support and other value-added services to its customers, fill customer orders and stock its products. These distributors do not sell those products exclusively, and to the extent they choose to emphasize a competitor's products over our products, our results of operations could be harmed. Our contracts with these distributors may be terminated by either party with notice. Our distributors are located all over the world, and are of various sizes and financial conditions. Lower sales, lower earnings, debt downgrades, the inability to access capital markets and higher interest rates could potentially affect our distributors' operations. Further, our distributors have contractual rights to return unsold inventory to us, and, if this were to happen, we could incur significant cost in finding alternative sales channels for these products or through write-offs. Any adverse condition experienced by our distributors could negatively impact their level of support for our products or the rate at which they make payments to us and, consequently, could harm our results of operations. We rely on accurate and timely sales reports from our distributors in order for our financial results to represent the actual sales that our distributors make for us in any given period. Any inaccuracies or delays in these reports could negatively affect our ability to produce accurate and timely financial reports and to recognize revenue. We also rely on distributors for sales forecasts, and any inaccuracies in such forecasts could impair the accuracy of our projections and planned operations.

Risks Related to Our Industry

We may be unable to make the substantial and productive research and development investments, which are required to remain competitive in our business.

The semiconductor industry requires substantial investment in research and development in order to develop and bring to market new and enhanced technologies and products. Many of our products originated with our research and development efforts and have provided us with a significant competitive advantage. Our research and development expense was $106.4 million in 2015, $70.9 million in 2014 and $50.5 million in 2013. We are committed to investing in new product development in order to remain competitive in our target markets. We do not know whether we will have sufficient resources to maintain the level of investment in research and development required to remain competitive. In addition, we cannot be sure that the technologies which are the focus of our research and development expenditures will become commercially successful.

Our business, financial condition and results of operations could be adversely affected by worldwide economic conditions, as well as political and economic conditions in the countries in which we conduct business.

Our business and operating results are impacted by worldwide economic conditions. Uncertainty about current global economic conditions may cause businesses to continue to postpone spending in response to tighter credit, unemployment or negative financial news. This in turn could have a material negative effect on the demand for our semiconductor products or the products into which our semiconductors are incorporated. Multiple factors relating to our international operations and to particular countries in which we operate could negatively impact our business, financial condition and results of operations. These factors include:

- changes in political, regulatory, legal or economic conditions;
- restrictive governmental actions, such as restrictions on the transfer or repatriation of funds and foreign investments and trade protection measures, including export duties and quotas and customs duties and tariffs;
- disruptions of capital and trading markets;
- changes in import or export requirements;
- transportation delays;
- civil disturbances or political instability;
- geopolitical turmoil, including terrorism, war or political or military coups;
- public health emergencies;
- differing employment practices and labor standards;
- limitations on our ability under local laws to protect our intellectual property;
- local business and cultural factors that differ from our customary standards and practices;
- nationalization and expropriation;

- changes in tax or intellectual property laws;
- currency fluctuations relating to our international operating activities; and
- difficulty in obtaining distribution and support.

A significant portion of our products are manufactured, assembled and tested outside the United States. Any conflict or uncertainty in these countries, including due to natural disasters, public health concerns, political unrest or safety concerns, could harm our business, financial condition and results of operations. In addition, if the government of any country in which our products are manufactured or sold sets technical standards for products manufactured in or imported into their country that are not widely shared, it may lead some of our customers to suspend imports of their products into that country, require manufacturers in that country to manufacture products with different technical standards and disrupt cross-border manufacturing relationships which, in each case, could harm our business.

Changes in current or future laws or regulations or the imposition of new laws or regulations, including new or changed tax regulations, environmental laws and export control laws, or new interpretations thereof, by federal or state agencies or foreign governments could impair our ability to compete in international markets.

Changes in current laws or regulations applicable to us or the imposition of new laws and regulations in the United States or other jurisdictions in which we do business, such as China, Japan, Korea, Singapore and Taiwan, could materially and adversely affect our business, financial condition and results of operations. For example, we have entered into agreements with local governments to provide us with, among other things, favorable local tax rates if certain minimum criteria are met, as discussed in our risk factor entitled “Tax benefits that we received may be terminated or reduced in the future, which would increase our costs.” These agreements may require us to meet several requirements as to investment, headcount and activities to retain this status. If we fail to otherwise meet the conditions of the local agreements, we may be subject to additional taxes, which in turn would increase our costs. In addition, potential future U.S. tax legislation could impact the tax benefits we effectively realize under these agreements.

Due to environmental concerns, the use of lead and other hazardous substances in electronic components and systems is receiving increased attention. In response, the European Union passed the Restriction on Hazardous Substances, or RoHS, Directive, legislation that limits the use of lead and other hazardous substances in electrical equipment. The RoHS Directive became effective July 1, 2006. We believe that our current product designs and material supply chains are in compliance with the RoHS Directive. If our product designs or material supply chains are deemed not to be in compliance with the RoHS Directive, we and our third party manufacturers may need to redesign products with components meeting the requirements of the RoHS Directive and we may incur additional expense as well as loss of market share and damage to our reputation.

We are also subject to export control laws, regulations and requirements that limit which products we sell and where and to whom we sell our products. In some cases, it is possible that export licenses would be required from U.S. government agencies for some of our products in accordance with the Export Administration Regulations and the International Traffic in Arms Regulations. We may not be successful in obtaining the necessary export licenses in all instances. Any limitation on our ability to export or sell our products imposed by these laws would adversely affect our business, financial condition and results of operations. In addition, changes in our products or changes in export and import laws and implementing regulations may create delays in the introduction of new products in international markets, prevent our customers from deploying our products internationally or, in some cases, prevent the export or import of our products to certain countries altogether. While we are not aware of any other current or proposed export or import regulations which would materially restrict our ability to sell our products in countries such as China, Japan, Korea, Singapore or Taiwan, any change in export or import regulations or related legislation, shift in approach to the enforcement or scope of existing regulations, or change in the countries, persons or technologies targeted by these regulations, could result in decreased use of our products by, or in our decreased ability to export or sell our products to, existing or potential customers with international operations. In such event, our business and results of operations could be adversely affected. In addition, we are subject to economic and trade sanctions programs that are administered by the U.S. Treasury Department’s Office of Foreign Assets Control, or OFAC, that prohibit or restrict transactions to or from or dealings with specified countries, their governments, and in certain circumstances, with individuals and entities that are specially-designated nationals of those countries, narcotics traffickers and terrorists or terrorist organizations. Violations of these trade control laws and sanctions regulations are punishable by civil penalties, including fines, denial of export privileges, injunctions, asset seizures, debarment from government contracts, and revocations or restrictions of licenses, as well as criminal fines and imprisonment.

We are also subject to risks associated with compliance with applicable anti-corruption laws, including the Foreign Corrupt Practices Act, or FCPA, which generally prohibits companies and their employees and intermediaries from making payments to foreign officials for the purpose of obtaining or keeping business, securing an advantage, or directing business to another, and requires public companies to maintain accurate books and records and a system of internal accounting controls. Under the FCPA, companies may be held liable for actions taken by directors, officers, employees, agents, or other strategic or local partners or representatives. If we or our intermediaries fail to comply with the requirements of the FCPA or similar laws, governmental authorities in the United States and elsewhere could seek to impose civil and criminal fines and penalties which could have a material adverse effect on our business, results of operations and financial condition.

Our product or manufacturing standards could also be impacted by new or revised environmental rules and regulations or other social initiatives. For instance, the SEC adopted new disclosure requirements in 2012 relating to the sourcing of certain minerals from the Democratic Republic of Congo and certain other adjoining countries. Those new rules, which required reporting starting in 2014, could

adversely affect our costs, the availability of minerals used in our products and our relationships with customers and suppliers. Also, since our supply chain is complex, we may face reputational challenges with our customers, stockholders, and other stakeholders if we are unable to sufficiently verify the origins for any conflict minerals used in the products that we sell.

We are subject to the cyclical nature of the semiconductor industry, which has suffered and may suffer from future recessionary downturns.

The semiconductor industry is highly cyclical and is characterized by constant and rapid technological change, rapid product obsolescence and price erosion, evolving standards and wide fluctuations in product supply and demand. The industry experienced a significant downturn during the current global recession. These downturns have been characterized by diminished product demand, production overcapacity, high inventory levels and accelerated erosion of average selling prices. The most recent downturn and any future downturns could negatively impact our business and operating results. Furthermore, any upturn in the semiconductor industry could result in increased competition for access to third-party foundry and assembly capacity. We are dependent on the availability of this capacity to manufacture and assemble our integrated circuits. None of our third-party foundry or assembly contractors has provided assurances that adequate capacity will be available to us in the future.

Our products must conform to industry standards in order to be accepted by end users in our markets.

Our products comprise only a part of larger electronic systems. All components of these systems must uniformly comply with industry standards in order to operate efficiently together. These industry standards are often developed and promoted by larger companies who are industry leaders and provide other components of the systems in which our products are incorporated. In driving industry standards, these larger companies are able to develop and foster product ecosystems within which our products can be used. We work with a number of these larger companies in helping develop industry standards with which our products are compatible. If larger companies do not support the same industry standards that we do, or if competing standards emerge, market acceptance of our products could be adversely affected, which would harm our business.

Some industry standards may not be widely adopted or implemented uniformly, and competing standards may still emerge that may be preferred by our customers. Products for communications and computing applications are based on industry standards that are continually evolving. Our ability to compete in the future will depend on our ability to identify and ensure compliance with these evolving industry standards. The emergence of new industry standards could render our products incompatible with products developed by other suppliers or make it difficult for our products to meet the requirements of certain OEMs. As a result, we could be required to invest significant time and effort and to incur significant expense to redesign our products to ensure compliance with relevant standards. If our products are not in compliance with prevailing industry standards for a significant period of time, we could miss opportunities to achieve crucial design wins. We may not be successful in developing or using new technologies or in developing new products or product enhancements that achieve market acceptance. Our pursuit of necessary technological advances may require substantial time and expense.

Industry consolidation may lead to increased competition and may harm our operating results.

There has been a trend toward industry consolidation in our markets for several years. We expect this trend to continue as companies attempt to improve the leverage of growing research and development costs, strengthen or hold their market positions in an evolving industry or are unable to continue operations. Companies that are strategic alliance partners in some areas of our business may acquire or form alliances with our competitors, thereby reducing their business with us. We believe that industry consolidation may result in stronger competitors that are better able to compete as sole-source vendors for customers. This could lead to more variability in our operating results and could have a material adverse effect on our business, operating results and financial condition.

Risks Related to Our Common Stock

The trading price and volume of our common stock is subject to price volatility. This volatility may affect the price at which our common stock is sold.

The trading price of our common stock has experienced wide fluctuations. For example since our initial public offering through December 31, 2015, the closing price of our common stock has ranged from $7.20 to $32.32. Volatility in the market price of our common stock may occur in the future in response to many risk factors listed or incorporated by reference in this offering memorandum and others beyond our control, including but not limited to:

- actual or anticipated fluctuations in our financial condition and operating results;
- changes in the economic performance or market valuations of other companies that provide high-speed analog semiconductor solutions;
- loss of a significant amount of existing business;
- actual or anticipated changes in our growth rate relative to our competitors;
- actual or anticipated fluctuations in our competitors' operating results or changes in their growth rates;
- issuance of new or updated research or reports by securities analysts;
- our announcement of actual results for a fiscal period that are higher or lower than projected results or our announcement of revenue or earnings guidance that is higher or lower than expected;
- regulatory developments in our target markets affecting us, our customers or our competitors;
- fluctuations in the valuation of companies perceived by investors to be comparable to us;
- share price and volume fluctuations attributable to inconsistent trading volume levels of our shares;
- sales or expected sales of additional common stock or equity or equity-linked securities;
- terrorist attacks or natural disasters or other such events impacting countries where we or our customers have operations; and
- general economic and market conditions.

Furthermore, the stock markets have experienced extreme price and volume fluctuations that have affected and continue to affect the market prices of equity securities of many companies. These fluctuations often have been unrelated or disproportionate to the operating performance of those companies. These broad market and industry fluctuations, as well as general economic, political and market conditions such as recessions, interest rate changes or international currency fluctuations, may cause the market price of shares of our common stock to decline. In the past, companies that have experienced volatility in the market price of their stock have been subject to securities class action litigation. We may be the target of this type of litigation in the future. Securities litigation against us could result in substantial costs and divert our management's attention from other business concerns, which could seriously harm our business. Each of these factors, among others, could harm the value of our common stock.

Due to the nature of our compensation program, our executive officers can sell shares of our common stock, often pursuant to trading plans established under Rule 10b5-1 of the Exchange Act, and certain of our executive officers currently have 10b5-1 trading plans in place. As a result, sales of common stock by our executive officers may not be indicative of their respective opinions of our performance at the time of sale or of our potential future performance. Nonetheless, the market price of our common stock may be affected by sales of shares by our executive officers.

If securities or industry analysts do not publish research or reports about our business, or if they change their recommendations regarding our stock adversely, our stock price and trading volume could decline.

The trading market for our common stock will be influenced by the research and reports that industry or securities analysts publish about us or our business. If one or more of the analysts who cover us downgrade our stock, our stock price would likely decline. If one or more of these analysts cease coverage of our company or fail to regularly publish reports on us, we could lose visibility in the financial markets, which in turn could cause our stock price or trading volume to decline.

We may not be able to obtain capital when desired on favorable terms, if at all, or without dilution to our stockholders and our failure to raise capital when needed could prevent us from executing our growth strategy.

We believe that our existing cash and cash equivalents, investments in marketable securities, and cash flows from our operating activities, will be sufficient to meet our anticipated cash needs for at least the next 12 to 18 months. We operate in an industry, however, that makes our prospects difficult to evaluate. It is possible that we may not generate sufficient cash flow from operations or otherwise have the capital resources to meet our future capital needs. If this occurs, we may need additional financing to execute on our current or future business strategies, including to:

- invest in our research and development efforts by hiring additional technical and other personnel;
- expand our operating infrastructure;
- acquire complementary businesses, products, services or technologies; or
- otherwise pursue our strategic plans and respond to competitive pressures.

If we raise additional funds through the issuance of equity or convertible debt securities, the percentage ownership of our stockholders could be significantly diluted, and these newly-issued securities may have rights, preferences or privileges senior to those of existing stockholders. If we raise additional funds by obtaining loans from third parties, the terms of those financing arrangements may include negative covenants or other restrictions on our business that could impair our operational flexibility, and would also require us to incur interest expense. There is no assurance that additional financing will be available on terms favorable to us, or at all. If adequate funds are not available or are not available on acceptable terms, if and when needed, our ability to fund our operations, take advantage of unanticipated opportunities, develop or enhance our products, or otherwise respond to competitive pressures could be significantly limited.

Delaware law and our corporate charter and bylaws contain anti-takeover provisions that could delay or discourage takeover attempts that stockholders may consider favorable, which could also reduce the market price of our common stock.

Provisions in our restated certificate of incorporation and amended and restated bylaws may have the effect of delaying or preventing a change of control or changes in our management. These provisions include the following:

- the right of our board of directors to elect a director to fill a vacancy created by the expansion of our board of directors;
- the classification of our board of directors so that only a portion of our directors are elected each year, with each director serving a three-year term;
- the requirement for advance notice for nominations for election to our board of directors or for proposing matters that can be acted upon at a stockholders' meeting;
- the ability of our board of directors to alter our bylaws without obtaining stockholder approval;
- the ability of our board of directors to issue, without stockholder approval, up to 10,000,000 shares of preferred stock with rights set by our board of directors, which rights could be senior to those of common stock;
- the required approval of holders of at least two-thirds of the shares entitled to vote at an election of directors to adopt, amend or repeal our bylaws or amend or repeal the provisions of our certificate of incorporation regarding the election and removal of directors and the ability of stockholders to take action by written consent;
- the elimination of the right of stockholders to call a special meeting of stockholders and to take action by written consent; and
- designating the state and federal courts located within the State of Delaware as the exclusive forums for derivative actions, claims of breach of fiduciary duty by any director, officer or other employee, claims arising pursuant to any provisions of the Delaware General Corporation Law and claims governed by the internal affairs doctrine.

In addition, because we are incorporated in Delaware, we are governed by the provisions of Section 203 of the Delaware General Corporation Law. These provisions may prohibit or restrict large stockholders, in particular those owning 15% or more of our outstanding voting stock, from merging or combining with us. These provisions in our restated certificate of incorporation and amended and restated bylaws and under Delaware law could discourage potential takeover attempts and could reduce the price that investors might be willing to pay for shares of our common stock in the future and result in the market price of our common stock being lower than they would without these provisions.

We do not currently intend to pay dividends on our common stock and, consequently, the ability to achieve a return on an investment in our stock will depend on appreciation in the price of our common stock.

We have never declared or paid any cash dividends on our common stock and do not currently intend to do so for the foreseeable future. We currently intend to invest our future earnings, if any, to fund our growth. Therefore, the success of an investment in shares of our common stock will depend upon any future appreciation in their value. There is no guarantee that our common stock will appreciate in value.

ITEM 1B. *UNRESOLVED STAFF COMMENTS*

None.

ITEM 2. *PROPERTIES*

We lease 57,914 square feet of office space in Santa Clara, California which currently serves as our principal executive office, which will expire on August 17, 2019. We also lease 40,522 square feet of office space in Westlake Village, California under a lease that will expire on December 31, 2017. Our Singapore subsidiary currently leases 6,374 square feet of office space in Singapore under a lease that expires on April 30, 2017. Our United Kingdom subsidiary currently leases office space in Northamptonshire, England under a lease that expires on March 30, 2016. We also occupy space in Folsom, California, consisting of 7,532 square feet under a lease that expires on November 30, 2020, and space in Raleigh, North Carolina, consisting of 15,440 square feet under a lease that expires on March 31, 2017. Our Canada subsidiary currently leases 13,951 square feet in Ottawa, Canada under a lease that expires on October 31, 2016. We believe that current facilities, are sufficient to meet our needs for the foreseeable future. For additional information regarding our obligations under property leases, see Note 16 of Notes to Consolidated Financial Statements, included in Part II, “Item 8, Financial Statements and Supplementary Data”.

ITEM 3. *LEGAL PROCEEDINGS –*

We are currently a party to the following legal proceedings:

Netlist, Inc. v. Inphi Corporation, Case No. 09-cv-6900 (C.D. Cal.)

On September 22, 2009, Netlist filed suit in the United States District Court, Central District of California, or the Court, asserting that we infringe U.S. Patent No. 7,532,537. Netlist filed an amended complaint on December 22, 2009, further asserting that we infringe U.S. Patent Nos. 7,619,912 and 7,636,274, collectively with U.S. Patent No. 7,532,537, the patents-in-suit, and seeking both unspecified monetary damages to be determined and an injunction to prevent further infringement. These infringement claims allege that our iMB™ and certain other memory module components infringe the patents-in-suit. We answered the amended complaint on February 11, 2010 and asserted that we do not infringe the patents-in-suit and that the patents-in-suit are invalid. In 2010, we filed *inter partes* requests for reexamination with the United States Patent and Trademark Office (the “USPTO”), asserting that the patents-in-suit are invalid. As a result of the proceedings at the USPTO, the Court has stayed the litigation, with the parties advising the Court on status every 120 days.

As to the proceeding at the USPTO, reexamination has been ordered for all of the patents that were alleged to infringe, and at present, the USPTO has determined that none of the originally filed claims are valid, with certain amended claims being determined patentable. It is expected that a Reexamination Certificate will issue for U.S. Patent No. 7,532,537 based upon amended claims, and the parties continue to assert their respective positions with respect to the reexamination proceedings for U.S. Patent Nos. 7,619,912 and 7,636,274.

While we intend to defend the foregoing USPTO proceedings and lawsuit vigorously, the USPTO proceedings and litigation, whether or not determined in our favor or settled, could be costly and time-consuming and could divert management’s attention and resources, which could adversely affect our business.

Based on the nature of USPTO proceedings and litigation, we are currently unable to predict the final outcome of this lawsuit and therefore, cannot determine the likelihood of loss nor estimate a range of possible loss. However, because of the nature and inherent uncertainties of litigation, should the outcome of these actions be unfavorable, our business, financial condition, results of operations or cash flows could be materially and adversely affected.

Other Litigation Matters

In March 2015, we settled a patent dispute involving Cortina and Vitesse Semiconductor Corporation (Vitesse). The patent dispute involved a certain patent family owned by Vitesse associated with error correction. We paid Vitesse $750,000 to resolve the dispute. Based on the Agreement and Plan of Merger dated July 30, 2014, as amended by Amendment No. 1 to the Agreement and Plan of Merger dated September 25, 2014, we were indemnified for this settlement arising from this claim, up to an amount of $750,000.

We are not currently a party to any other material litigation. The semiconductor industry is characterized by frequent claims and litigation, including claims regarding patent and other intellectual property rights as well as improper hiring practices. We may from time to time become involved in litigation relating to claims arising from our ordinary course of business. These claims, even if not meritorious, could result in the expenditure of significant financial and managerial resources.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. *MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES*

Market for Registrant's Common Equity

Our common stock is traded on the New York Stock Exchange under the symbol "IPHI". The following table sets forth the range of high and low sales prices for our common stock in each quarter:

2015	Low	High
Fourth Quarter	$ 22.83	$ 32.32
Third Quarter	20.30	25.99
Second Quarter	17.27	27.11
First Quarter	17.05	21.33

2014	Low	High
Fourth Quarter	$ 12.41	$ 19.14
Third Quarter	12.57	17.17
Second Quarter	13.49	16.35
First Quarter	10.87	16.56

As of February 25, 2016, we had approximately 60 holders of record of our common stock. This number does not include the number of persons whose shares are in nominee or in "street name" accounts through brokers.

We have never declared or paid any cash dividends on shares of our capital stock. We expect to retain all of our earnings to finance the expansion and development of our business and we do not currently intend to pay any cash dividends on our capital stock in the foreseeable future. Our board of directors will determine future dividends, if any.

Director and Executive Officers have currently and may from time to time in the future, establish pre-set trading plans in accordance with Rule 10b5-1 promulgated under the Securities Exchange Act of 1934.

Securities Authorized for Issuance under Equity Compensation Plans

Information regarding the securities authorized for issuance under our equity compensation plans can be found under Part III, "Item 12, Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters".

Share Performance Graph

The following information is not deemed to be "soliciting material" or to be "filed" with the Securities and Exchange Commission or subject to Regulation 14A or 14C under the Securities Exchange Act of 1934 or to the liabilities of Section 18 of the Securities Exchange Act of 1934, and will not be deemed to be incorporated by reference into any filing under the Securities Act of 1933 or the Securities Exchange Act of 1934, except to the extent we specifically incorporate it by reference into such a filing.

Set forth below is a line graph showing the cumulative total stockholder return (change in stock price plus reinvested dividends) assuming the investment of $100 on November 11, 2010 (the day of our initial public offering) in each of our common stock, the S&P 500 Index and PHLX Semiconductor Index for the period commencing on November 11, 2010 and ending on December 31, 2015. The comparisons in the table are required by the Securities and Exchange Commission and are not intended to forecast or be indicative of future performance of our common stock.

ITEM 6. SELECTED CONSOLIDATED FINANCIAL DATA

The following selected consolidated financial data should be read together with Part II, "Item 7., Management's Discussion and Analysis of Financial Condition and Results of Operations" and our consolidated financial statements and related notes included elsewhere in this report. The selected balance sheet data as of December 31, 2015 and 2014, and the selected statements of operations data for each of the years ended December 31, 2015, 2014, and 2013 have been derived from our audited financial statements included elsewhere in this report. The selected balance sheet data as of December 31, 2013, 2012 and 2011 and the selected statements of operations data for the years ended December 31, 2012 and 2011 have been derived from our audited financial statements not included in this report. Historical results are not necessarily indicative of the results to be expected in the future.

	Year Ended December 31,				
	2015	2014	2013	2012	2011
	(in thousands, except share and per share data)				
Consolidated Statement of Operations Data:					
Revenue[1]	$ 246,616	$ 156,142	$ 102,664	$ 91,206	$ 79,297
Cost of revenue[1] [2]	98,294	70,488	37,095	32,684	28,687
Gross profit	148,322	85,654	65,569	58,522	50,610
Operating expense:					
Research and development[1] [2]	106,444	70,863	50,516	40,102	28,565
Sales and marketing[1] [2]	26,563	20,003	15,741	14,052	12,700
General and administrative[1] [2]	20,322	16,153	11,614	12,300	9,141
Total operating expense	153,329	107,019	77,871	66,454	50,406
Income (loss) from operations	(5,007)	(21,365)	(12,302)	(7,932)	204
Interest expense	(783)	—	—	—	—
Other income	221	495	876	914	509
Income (loss) before income taxes	(5,569)	(20,870)	(11,426)	(7,018)	713
Provision (benefit) for income taxes[3]	7,982	1,738	1,752	13,673	(1,218)
Net income (loss)	$ (13,551)	$ (22,608)	$ (13,178)	$ (20,691)	$ 1,931
Earnings per share:					
Basic	$ (0.35)	$ (0.69)	$ (0.45)	$ (0.73)	$ 0.07
Diluted	$ (0.35)	$ (0.69)	$ (0.45)	$ (0.73)	$ 0.07
Weighted-average shares used in computing earnings per share:					
Basic	38,580,330	32,707,868	29,493,005	28,378,680	26,799,237
Diluted	38,580,330	32,707,868	29,493,005	28,378,680	29,367,423

(1) On October 3, 2014, we completed the acquisition of Cortina, including its high-speed interconnect and optical transport product lines for approximately $52.5 million in cash and approximately 5.3 million shares of our common stock in accordance with the Agreement and Plan of Merger dated July 30, 2014 as amended by Amendment No. 1 to the Agreement and Plan of Merger dated September 25, 2014. The results of operations of Cortina and estimated fair value of assets acquired and liabilities assumed were included in our consolidated financial statements from the acquisition date. This acquisition resulted in a significant change in our statement of operations in 2015 and 2014 which includes:

(i) Charge to cost of goods sold resulting from the step-up inventory acquired from Cortina; and

(ii) Charge to cost of goods sold and operating expenses from amortization of acquired intangibles

Footnotes continued on the following page.

	As of December 31,				
	2015	2014	2013	2012	2011
	(in thousands)				
Consolidated Balance Sheet Data:					
Cash and cash equivalents	$ 283,044	$ 30,366	$ 31,667	$ 30,161	$ 29,696
Investments in marketable securities	43,616	38,908	90,890	91,107	89,283
Working capital	344,897	108,623	129,013	131,310	129,395
Total assets	505,046	278,459	182,342	170,074	172,628
Long-term convertible debt	171,701	—	—	—	—
Other liabilities	42,675	39,285	22,949	17,109	14,224
Total stockholders' equity	290,670	239,174	159,393	152,965	158,404

Footnotes continued from the prior page.

(2) Stock-based compensation expense is included in our results of operations as follows:

	As of December 31,				
	2015	2014	2013	2012	2011
	(in thousands)				
Operating expenses:					
Cost of revenue	$ 1,471	$ 1,260	$ 1,086	$ 726	$ 315
Research and development	16,904	12,420	8,586	5,833	3,214
Sales and marketing	4,445	4,079	3,204	2,660	2,054
General and administrative	5,473	4,701	4,102	3,240	1,609

(3) The provision for income taxes for the year ended December 31, 2012 included the establishment of valuation allowance against deferred tax assets.

ITEM 7. *MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS*

This Management's Discussion and Analysis of Financial Condition and Results of Operations and this report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. When used in this report, the terms "may," "might," "will," "objective," "intend," "should," "could," "can," "would," "expect," "believe," "estimate," "predict," "potential," "plan," or the negative of these terms, and similar expressions intended to identify forward-looking statements. These statements include statements regarding our anticipated trends and challenges in our business and the markets in which we operate, including the market for 40G and 100G high-speed analog semiconductor solutions, our plans for future products and anticipated features and benefits thereof, expansion of our product offerings and enhancements of existing products, critical accounting policies and estimates, our expectations regarding our expenses and revenue, sources of revenue, our tax benefits, the benefits of our products and services, our technological capabilities and expertise, timing of the development of our products, our liquidity position and sufficiency thereof, including our anticipated cash needs, our operating capital expenditures and requirements and our needs for additional financing and potential consequences thereof, our anticipated growth and growth strategies, our ability to retain and attract customers, particularly in light of our dependence on a limited number of customers for a substantial portion of our revenue, our expectations regarding competition, interest rate sensitivity, adequacy of our disclosure controls, our legal proceedings and warranty claims. These forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by these or any other forward-looking statements. These risks and uncertainties include, but are not limited to, those risks discussed below, as well as factors affecting our results of operations, our ability to manage our growth, our ability to sustain or increase profitability, demand for our solutions, the effect of declines in average selling prices for our products, our ability to compete, our ability to rapidly develop new technology and introduce new products, our ability to safeguard our intellectual property, trends in the semiconductor industry and fluctuations in general economic conditions, and the risks set forth throughout this Report, including the risks set forth under Part I, " Item 1A, Risk Factors". Readers are cautioned not to place undue reliance on these forward-looking statements, which are based on current expectations and reflect management's opinions only as of the date hereof. These forward-looking statements speak only as of the date of this Report. We expressly disclaim any obligation or undertaking to release publicly any updates or revisions to any forward-looking statements contained herein to reflect any change in our expectations with regard thereto or any changes in events, conditions or circumstances on which any such statement is based.

The following discussion and analysis should be read in conjunction with the consolidated financial statements and related notes that are included elsewhere in this Annual Report on Form 10-K.

Overview

We are a fabless provider of high-speed analog and mixed signal semiconductor solutions for the communications, datacenter and computing markets. We often refer to our business as covering various data transport segments from "fiber to memory". Our analog and mixed signal semiconductor solutions provide high signal integrity at leading-edge data speeds while reducing system power consumption. Our semiconductor solutions are designed to address bandwidth bottlenecks in networks, maximize throughput and minimize latency in computing environments and enable the rollout of next generation communications, datacenter and computing infrastructures. Our solutions provide a vital high-speed interface between analog signals and digital information in high-performance systems such as telecommunications transport systems, enterprise networking equipment, datacenter and enterprise servers, storage platforms, test and measurement equipment and military systems. We provide 40G and 100G high-speed analog semiconductor solutions for the communications market and high-speed memory interface solutions for the computing market. We have a wide range product portfolio with many products sold in communication and datacenter markets as of December 31, 2015. We have ongoing, informal collaborative discussions with industry and technology leaders such as AMD, Cisco, ARM Ltd., Ciena, Cisco, Dell Incorporated, Huawei, Intel, Juniper, Micron, Nokia, Neophotonics, Samsung, SK Hynix and other data center companies to design architectures and products that solve bandwidth bottlenecks in existing and next generation communications and computing systems. Although we do not have any formal agreements with these entities, we engage in informal discussions with these entities with respect to anticipated technological challenges, next generation customer requirements and industry conventions and standards. We help define industry conventions and standards within the markets we target by collaborating with technology leaders, OEMs, systems manufacturers and standards bodies.

The recent history of our product development and sales and marketing efforts is as follows:

- In 2009, due to the launch of Intel's Nehalem-based platform servers, we began volume shipments of our single chip high-speed PLLs and register solution to be used primarily in conjunction with DDR3 modules. We also shipped engineering samples of the first generation of our isolation memory buffer, or iMB™, for the computing market. We also began development of our second generation iMB™ product, the architecture for which has been adopted by the Joint Electronic Device Engineering Council, or JEDEC, and development of our low power CMOS SerDes product for next generation 100G Ethernet in enterprise networks.

- In 2010, we began to ship in production volume a "low voltage" version of our integrated PLL and register buffer. We also shipped engineering samples of the second generation iMB™ product. We also introduced and began to ship in commercial volume the industry's first transimpedance ampliform for 100G reconfigurable colorless networks, which we identify as product number 2850TA-SO1D.

- In 2011, we began to ship in production volume a new "ultra-low voltage" version of our integrated PLL and register buffer and the second generation of iMB™. We also shipped engineering samples of our iPHY 100 Gbe CMOS CDR and SerDes Gearbox products.

- In 2012, we started shipping samples of the IN3250TA, our second-generation transimpedance amplifier, or TIA, for 100G reconfigurable colorless networks. We also introduced the industry's first quad linear driver designed for linear transmitters to enable next-generation 100G/400G coherent systems to address the need for higher speed, higher performance networking infrastructure. We also began shipping in production volume our lowest power integrated phase lock loop and register buffer, which is shipping in the form of product number INSSTE32882XV. We also announce the availability of the world's first production ready 100G CMOS PHY/SerDes Gearbox products for next-generation data center, enterprise and service provider line cards.

- In 2013, we introduced the second generation 100G CMOS SerDes gearbox integrated circuit, or GB IC, for data center, enterprise and service provider line cards. The new GB IC with Tri-rate™ foundation is designed to enable seamless support of 10G, 40G and 100G Ethernet and optical transport network on a single line card. We also began shipping an improved version of iMB™ which delivers up to 35% improvement in LRDIMM bandwidth for 768GB memory capacities and 40% improvement in memory bandwidth for servers up to 512GB memory capacities. We also introduced the next generation high speed memory interface product, DDR4 register for the computing market. We also began shipping the industry's first quad linear driver designed for linear transmitters to enable next-generation 100G/400G coherent systems to address the need for higher speed, higher performance networking infrastructure.

- In 2014, we completed the acquisition of Cortina Systems Inc. which expands our market share of the high-speed optical and networking interconnects. This added more than 130 products in our portfolio which includes high-speed interconnect and optical transport products. We also started sampling the IN3252TA, the industry's first 32 Gbps dual high gain linear/variable-gain amplifier. The IN3252TA is designed specifically to address the demanding requirements for 100G coherent transmission for the Metro market. We also announced the availability of a new iKON™ family of 100G Clock and Data Recovery Retimer integrated circuits (IC) targeted at next-generation 2-Terabit line cards. The first product in this series, the IN112525-LC 100G CMOS CDR Retimer IC, is designed to accelerate deployment for higher density 100G in service center and data center networks. We also announced the availability of IN3216DZ, the first single chip quad channel linear Mach Zehnder driver in bare die form to address the network needs for 100G coherent systems in small form factors for the metro market. Specifically designed to be co-packaged with MZ modulators, the IN3216DZ will reduce size and cost of 100G coherent systems to enable higher density metro solutions. We also started sampling 45GBaud Linear Coherent Product Family, the industry's first linear ICs enabling 400G coherent solutions for next-generation metro to long haul applications. The initial product offerings includes IN4514SZ, a high-performance octal linear differential to single-ended Mach-Zehnder Modulator Driver and IN4550TA, a quad linear TIA/VGA Amplifier.

- In 2015, we started sampling a new product in our 45GBaud Linear Coherent Product Family, IN4518SZ. The IN4518SZ is a quad linear differential to single-ended Mach-Zehnder Modulator Driver, pin-compatible with the linear driver IN3214SZ, for 200G coherent Optical interconnect applications. The IN4518SZ extends the reach of 200G coherent for long haul applications and enables one set of hardware to serve multiple segments in the long haul and metro markets. We also announced the availability of the industry's first, highly integrated, lowest power 4-level Pulse Amplitude Modulation (PAM4) chipset solutions for intra-data center and inter-data center cloud interconnects. It's a family of PAM4 PHY ICs for 40G (IN014020-XL), 50G (IN015050-SF), 100G (IN015025-CA), 400G (IN015025-CD) and a companion linear TIA (IN2860TA) that will enable platform solutions for multi-rate PAM4 interconnects. We also started sampling the second generation DDR4 registering clock driver and data buffer and IN3217SZ, a quad linear differential to single-ended Mach-Zehnder Modulator Driver in a Surface Mount Technology (SMT) package. The new SMT quad linear driver extends the product portfolio by utilizing cost effective packaging for higher volume 100G/200G coherent long haul and metro optical interconnect applications.

Our products are designed into systems sold by OEMs, including Ciena, Cisco, Dell, EMC, H3C, HP, IBM, Juniper, Nokia and Oracle. We believe we are one of a limited number of suppliers to these OEMs for the types of products we sell, and in some cases we may be the sole supplier for certain applications. We sell both directly to these OEMs and to module manufacturers, original design manufacturers, or ODMs, and subsystems providers that, in turn, sell to these OEMs. During the year ended December 31, 2015, we sold our products to more than 160 customers. A significant portion of our revenue has been generated by a limited number of customers. We believe that sales to Cisco, directly and indirectly through subcontractors, accounted for approximately 13% of our total revenue for the year ended December 31, 2015. Sales to Samsung, including its subcontractors, accounted for 18% and 20% of our total revenue for the years ended December 31, 2014 and 2013, respectively. Sales directly and through distributors to Micron accounted for 11% of our total revenue for the year ended December 31, 2013. In addition, sales to SK Hynix, including its subcontractor, accounted for 16% of our total revenue for the year ended December 31, 2013. Substantially all of our sales to date, including our sales to Samsung, Micron and SK Hynix, are made on a purchase order basis. Since the beginning of 2006, we have shipped more than 200 million high-speed analog semiconductors. Our total revenue increased to $246.6 million and $156.1 million for the years ended December 31, 2015 and 2014. The increase in revenue was partially due to the acquisition of Cortina Systems as of October 3, 2014. As of December 31, 2015, our accumulated deficit was $102.7 million.

Sales to customers in Asia accounted for 68%, 71% and 71% of our total revenue in 2015, 2014 and 2013, respectively. Because many of our customers or their OEM manufacturers are located in Asia, we anticipate that a majority of our future revenue will continue to come from sales to that region. Although a large percentage of our sales are made to customers in Asia, we believe that a significant number of the systems designed by these customers are then sold to end users outside Asia.

In April 2010, we received approval from the government of Singapore to set up an international headquarters from which to conduct our international operations. Because of its geographic alignment with suppliers and customers, we established our operations in Singapore to become a new international headquarters office for receiving and fulfilling orders for product shipped to locations outside the United States. Singapore has a strong university system and an established group of technology-based companies from which to recruit new engineers. We intend to build a team of engineering capability in Singapore both for development as well as testing associated with manufacturing. International operations in Singapore commenced on May 1, 2010 and during 2010, we transitioned our international operations from the United States to our Singapore subsidiary.

Demand for new features changes rapidly. It is difficult for us to forecast the demand for our products, in part because of the complex supply chain between us and the end-user markets that incorporate our products. Due to our lengthy product development cycle, it is critical for us to anticipate changes in demand for our various product features and the applications they serve to allow sufficient time for product development and design. Our failure to accurately forecast demand can lead to product shortages that can impede production by our customers and harm our customer relationships. Conversely, our failure to forecast declining demand or shifts in product mix can result in excess or obsolete inventory.

Although revenue generated by each design win and the timing of the recognition of that revenue can vary significantly, we consider ongoing design wins to be a key factor in our future success. We consider a design win to occur when an OEM or contract manufacturer notifies us that it has selected our products to be incorporated into a product or system under development. The design win process is typically lengthy, and as a result, our sales cycles will vary based on the market served, whether the design win is with an existing or new customer and whether our product is under consideration for inclusion in a first or subsequent generation product. In addition, our customers' products that incorporate our semiconductors can be complex and can require a substantial amount of time to define, design and produce in volume. As a result, we can incur significant design and development expenditures in circumstances where we do not ultimately recognize, or experience delays in recognizing revenue. Our customers generally order our products on a purchase order basis. We do not have any long-term purchase commitments (in excess of one year) from any of our customers. Once our product is incorporated into a customer's design, however, we believe that our product is likely to continue to be purchased for that design throughout that product's life cycle because of the time and expense associated with redesigning the product or substituting an alternative semiconductor. Our design cycle from initial engagement to volume shipment is typically two to three years. Product life cycles in the markets we serve typically range from two to 10 years or more and vary by application.

Summary of Consolidated Financial Results

As discussed in more detail below, for the year ended December 31, 2015, compared to the year ended December 31, 2014, we delivered the following financial performance. The financial results for the years ended December 31, 2015 and 2014, include the results of operations of Cortina from the acquisition date and the effect of purchase price accounting.

- Total revenues increased by $90.5 million, or 58%, to $246.6 million.
- Gross profit as a percentage of revenue increased from 55% to 60%.
- Total operating expenses increased by $46.3 million, or 43%, to $153.3 million.
- Loss from operations decreased by $16.4 million, to loss of $5.0 million.
- Provision for income taxes increased by $6.2 million.
- Diluted loss per share decreased by $0.34, to ($0.35).

The increase in our revenue for the year ended December 31, 2015 was a result of inclusion of revenue from the October 4, 2014 acquisition of Cortina, as well as increase in consumption of our dual linear TIAs, quad linear driver products and iPHY products.

The increase in gross margin was due to increase in sale of high margin products as discussed above, lower amortization of inventory fair value step-up related to the acquired Cortina inventories for the year ended December 31 2015 as compared to year ended December 31, 2014, offset by increase in amortization of acquired intangibles..

Total operating expenses increased due primarily to an increase in headcount from the Cortina acquisition and stock-based compensation. Our expenses primarily consist of personnel costs, which include compensation, benefits, payroll related taxes and stock-based compensation. From December 31, 2014 to December 31, 2015, we hired 25 new employees, primarily in the engineering department. In addition, the acquisition of Cortina added 137 employees. We expect expenses to continue to increase in absolute dollars as we continue to invest resources to develop more products, to support the growth of our business. Our diluted loss per share decreased primarily due to increase in revenue, partially offset by increase in operating expenses and provision for income taxes.

In December 2015, we issued $230 million aggregate principal amount of 1.125% Convertible Senior Notes due 2020. The net proceeds from this offering were approximately $223.6 million, after deducting initial purchasers' discount and commissions and debt offering expenses. The net proceeds were partially used to purchase the capped call options of $17.8 million. We intend to use the remainder of the net proceeds for general corporate purposes including financing potential acquisitions and other strategic transactions. However, we currently have no commitments with respect to any such acquisitions or other strategic transactions.

Critical Accounting Policies and Significant Management Estimates

Our consolidated financial statements are prepared in accordance with U.S. Generally Accepted Accounting Principles, or GAAP. In connection with the preparation of our consolidated financial statements, we are required to make assumptions and estimates about future events, and apply judgments that affect the reported amounts of assets, liabilities, revenue, expenses and the related disclosures. We base our assumptions, estimates and judgments on historical experience, current trends and other factors that management believes to be relevant at the time our consolidated financial statements are prepared. On a regular basis, we review the accounting policies, assumptions, estimates and judgments to ensure that our consolidated financial statements are presented fairly and in accordance with GAAP. However, because future events and their effects cannot be determined with certainty, actual results could differ from our assumptions and estimates, and such differences could be material.

Our significant accounting policies are discussed in note 1 of the notes to our consolidated financial statements. We believe that the following accounting estimates are the most critical to aid in fully understanding and evaluating our reported financial results, and they require our most difficult, subjective or complex judgments, resulting from the need to make estimates about the effect of matters that are inherently uncertain. We have reviewed these critical accounting estimates and related disclosures with our audit committee.

Revenue Recognition

Our products are fully functional at the time of shipment and do not require production, modification or customization. We recognize revenue from product sales when persuasive evidence of an arrangement exists, delivery has occurred, the fee is fixed or determinable and collection is reasonably assured. Our fee is considered fixed or determinable at the execution of an agreement, based on specific products and quantities to be delivered at specified prices, which is evidenced by a customer purchase order or other persuasive evidence of an arrangement. Our agreements with non-distributor customers do not include rights of return or acceptance provisions. Product revenue is recognized upon shipment of product to customers, net of accruals for estimated sales returns and allowances, which to date, have not been significant.

Approximately 22% of our sales were made through third-party distributors in 2015. Sales to distributors are included in deferred revenue and we include the related costs in inventory until sales and delivery to the end customers occurs. Distributor arrangements, allow for limited price protection and rights of stock rotation on product unsold by the distributors. The price protection rights allow distributors the right to a credit in the event of declines in the price of our product that they hold prior to the sale to a specific end customer. In the event that we reduce the selling price of products held by distributors, deferred revenue related to distributors with price protection rights is reduced upon notification to the customer of the price change. Additionally, distributors may receive a credit for the price discounts associated with the distributors' customers that purchased those products. We estimate the extent of these distributor price discounts at each reporting period to reduce accounts receivable and deferred revenue, but we do not issue these discounts to the distributor until the inventory is sold to the distributors' customers. Revenue recognition on product sales through distributors is highly dependent on receiving pertinent and accurate data from our distributors in a timely fashion. Distributors provide us periodic data prior to the release of our consolidated financial statements regarding the product, price, quantity and end customer when products are resold, as well as the quantities of our products they still have in stock.

We recognize revenue from the sales and licensing of certain intellectual properties when the following fundamental criteria are met: (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred, (iii) the sales price is fixed or determinable, and (iv) collection of resulting receivables is reasonably assured.

Occasionally, we enter into development agreements with some of our customers and recognize revenue from these agreements upon completion and acceptance by the customer of contract deliverables or as services are provided, depending on the terms of the arrangement. Revenue is deferred for any amounts billed or received prior to completion of milestones or delivery of services.

We monitor collectability of accounts receivable primarily through review of the accounts receivable aging. Our policy is to record an allowance for doubtful accounts based on specific collection issues we have identified, aging of underlying receivables and historical experience of uncollectible balances. As of December 31, 2015 and 2014, our allowance for doubtful accounts was $165,000.

We have not made any material changes in the accounting methodology we use to record the allowance for doubtful accounts during the past three years. If actual results are not consistent with the assumptions and estimates used, for example, if the financial condition of the customer deteriorated, we may be required to record additional expense that could materially negatively impact our operating results. To date, however, substantially all of our receivables have been collected within following quarter.

Inventory Valuation

We value our inventory, which includes materials, labor and overhead, at the lower of cost or market. Cost is computed using standard cost, which approximates actual cost, on a first-in, first-out basis. We periodically write-down our inventory to the lower of cost or market based on our estimates that consider historical usage and future demand. These factors are impacted by market and economic conditions, technology changes, new product introductions and changes in strategic direction. The calculation of our inventory valuation requires management to make assumptions and to apply judgment regarding forecasted customer demand and technological obsolescence that may turn out to be inaccurate. Inventory valuation reserves were $4,608,000 and $1,949,000 as of December 31, 2015 and 2014, respectively. Inventory valuation reserves, once established, are not reversed until the related inventory has been sold or scrapped.

We have not made any material changes in the accounting methodology we use to record inventory reserves during the past three years. We do not believe there is a reasonable likelihood that there will be a material change in the future estimates or assumptions that we use to calculate our inventory reserve. However, if estimates regarding customer demand are inaccurate or changes in technology affect demand for certain products in an unforeseen manner, we may be exposed to losses or gains that could be material.

Product Warranty

Our products are under warranty against defects in material and workmanship generally for a period of one or two years. We accrue for estimated warranty cost at the time of sale based on anticipated warranty claims and actual historical warranty claims experience including knowledge of specific product failures that are outside of our typical experience. The warranty obligation is determined based on product failure rates, cost of replacement and failure analysis cost. We monitor product returns for warranty-related matters and monitor both a specific and general accrual for the related warranty expense based on specific circumstances and general historical experience. Our warranty obligation requires management to make assumptions regarding failure rates and failure analysis costs. If actual warranty costs differ significantly from these estimates, adjustments may be required in the future, which would adversely affect our gross margins and operating results. The warranty liability as of December 31, 2015 and 2014 was $110,000.

On November 3, 2014, we received a claim notification from an insurance company asserting a claim of approximately $4,000,000 for field installation repair and replacement costs incurred by a customer in 2011. We believe that we had fulfilled our contractual obligation to provide warranty repair and replacement, but referred the matter to our insurance carrier at the request of the insurance company. As of December 31, 2015, we believe the liability under this claim is not probable. Nevertheless, resolutions of third-party claims are inherently uncertain and as such, an unfavorable outcome could ultimately impact our business, cash flow and results of operations.

Business combinations

We use the acquisition method of accounting for business combinations and recognize assets acquired and liabilities assumed measured at their fair values on the date acquired. This requires us to recognize separately from goodwill the assets acquired and the liabilities assumed at their acquisition date fair values. Goodwill as of the acquisition date is measured as the excess of consideration transferred over the net of the acquisition date fair values of the assets acquired and the liabilities assumed. While we use our best estimates and assumptions to accurately value assets acquired and liabilities assumed at the acquisition date as well as contingent consideration, where applicable, our estimates are inherently uncertain and subject to refinement. As a result, during the measurement period, which may be up to one year from the acquisition date, we adjust the assets acquired and liabilities assumed with the corresponding offset to goodwill. Upon the conclusion of the measurement period or final determination of the values of assets acquired or liabilities assumed, whichever comes first, any subsequent adjustments are recognized in our consolidated statements of operations.

Accounting for business combinations requires our management to make significant estimates and assumptions, especially at the acquisition date, including our estimates for intangible assets, contractual obligations assumed and pre-acquisition contingencies, where applicable. Although we believe the assumptions and estimates we have made in the past have been reasonable and appropriate, they are based, in part, on historical experience and information obtained from the management of the acquired companies and are inherently uncertain. Critical estimates in valuing certain of the intangible assets we have acquired include, but are not limited to: future expected cash flows from product sales, customer contracts and acquired technologies, expected costs to develop in-process research and development into commercially viable products, estimated cash flows from the projects when completed, and discount rates. Unanticipated events and circumstances may occur that may affect the accuracy or validity of such assumptions, estimates or actual results.

Goodwill and Purchased Intangible Assets

Goodwill is recorded as the difference, if any, between the aggregate consideration paid for an acquisition and the fair value of the acquired net tangible and intangible assets. The amounts and useful lives assigned to intangible assets acquired, other than goodwill, impact the amount and timing of future amortization. The value of our intangible assets, including goodwill, could be impacted by future adverse changes such as: (a) any future declines in our operating results, (b) a decline in the valuation of technology company stocks, including the valuation of our common stock, (c) a further significant slowdown in the worldwide economy or the semiconductor industry, (d) any failure to meet the performance projections included in our forecasts of future operating results or (e) the abandonment of any of our acquired in-process research and development projects. We evaluate goodwill and purchased intangible assets deemed to have indefinite lives, on an annual basis in the fourth quarter or more frequently if we believe indicators of impairment exist. Significant management judgment is required in performing periodic impairment tests. The testing for a potential impairment of goodwill involves a two-step process. The first step involves comparing the estimated fair values of our reporting unit with the book values, including goodwill. If the estimated fair value exceeds book value, goodwill is considered not to be impaired and no additional steps are necessary. If, however, the fair value of the reporting unit is less than book value, then the carrying amount of the goodwill is compared with its implied fair value. The estimate of implied fair value of goodwill may require valuations of certain internally generated and unrecognized intangible assets such as our technology, customer relationships, patents and trademarks. If the carrying amount of goodwill exceeds the implied fair value of that goodwill, an impairment loss is recognized in an amount equal to the excess. If our actual results, or the plans and estimates used in future impairment analyses, are lower than the original estimates used to assess the recoverability of these assets, we could incur additional impairment charges. The acquisition of Cortina on October 3, 2014 increased our goodwill and identifiable intangible assets by $3,279,000 and $82,410,000, respectively. See note 2 to the notes to our consolidated financial statements. There was no evidence of impairment based on the annual impairment testing for the year ended December 31, 2015.

Stock-Based Compensation

We account for stock-based compensation in accordance with authoritative guidance which requires the measurement and recognition of compensation expense for all share-based payment awards made to employees and directors based on the grant date fair values of the awards. The fair value of stock option awards is estimated using the Black-Scholes option pricing model. The fair value of restricted stock units is based on the fair market value of our common stock on the date of grant. The value of the award that is ultimately expected to vest is recognized as expense over the requisite service periods in our consolidated statements of operations. We elected to treat share-based payment awards with graded vesting schedules and time-based service conditions as a single award and recognize stock-based compensation expense on a straight-line basis (net of estimated forfeitures) over the requisite service period. Stock-based compensation expenses are classified in the consolidated statement of operations based on the department to which the related employee reports.

We account for stock options issued to non-employees in accordance with the guidance for equity-based payments to non-employees. Stock option awards to non-employees are accounted for at fair value using the Black-Scholes option pricing model. Our management believes that the fair value of stock options is more reliably measured than the fair value of the services received. The fair value of the unvested portion of the options granted to non-employees is re-measured each period. The resulting increase in value, if any, is recognized as expense during the period the related services are rendered.

The Black-Scholes option pricing model requires management to make assumptions and to apply judgment in determining the fair value of our awards. The most significant assumptions and judgments include estimating the fair value of underlying stock, expected volatility and expected term. In addition, the recognition of stock-based compensation expense is impacted by estimated forfeiture rates.

We estimated the expected volatility from the historical volatilities of several unrelated public companies within the semiconductor industry because our common stock has limited trading history. When selecting the public companies used in the volatility calculation, we selected companies in the semiconductor industry with comparable characteristics to us, including stage of development, lines of business, market capitalization, revenue and financial leverage. The weighted average expected life of options was calculated using the simplified method. This decision was based on the lack of relevant historical data due to our limited experience and the lack of active market for our common stock. The risk-free interest rate is based on the U.S. Treasury yields in effect at the time of grant for periods corresponding to the expected term of the options. The expected dividend rate is zero based on the fact that we have not historically paid dividends and have no intention to pay cash dividends in the foreseeable future. The forfeiture rate is established based on the historical average period of time that options were outstanding and adjusted for expected changes in future exercise patterns.

We do not believe there is a reasonable likelihood that there will be material changes in the estimates and assumptions we use to determine stock-based compensation expense. In the future, if we determine that other option valuation models are more reasonable, the stock-based compensation expense that we record in the future may differ significantly from what we have recorded using the Black-Scholes option pricing model.

Income Taxes

Deferred tax assets and liabilities are determined based on differences between financial reporting and tax bases of assets and liabilities, and are measured using the enacted tax rates and laws that will be in effect when and where the differences are expected to reverse. We record a valuation allowance to reduce deferred tax assets to the amount that we believe is more likely than not to be realized. In assessing the need for a valuation allowance, we consider all positive and negative evidence, including scheduled reversals of deferred tax liabilities, historical levels of income, projections of future income, expectations and risk associated with estimates of future taxable income and ongoing prudent and practical tax planning strategies. To the extent that we believe it is more likely than not that some portion of our deferred tax assets will not be realized, we would increase the valuation allowance against deferred tax assets. The determination of recording or releasing a tax valuation allowance is made, in part, pursuant to an assessment performed by management regarding the likelihood that we will generate sufficient future taxable income against which the benefits of our deferred tax assets may or may not be realized. This assessment requires management to exercise significant judgment and make estimates with respect to our ability to generate revenue, gross profits, operating income and taxable income in future periods. Among other factors, management must make assumptions regarding current and projected overall business and semiconductor industry conditions, operating efficiencies, our ability to timely develop, introduce and consistently manufacture new products to meet our customers' needs and specifications, our ability to adapt to technological changes and the competitive environment, which may impact our ability to generate taxable income and, in turn, realize the value of our deferred tax assets. Although, we believe that the judgment we used is reasonable, actual results can differ due to a change in market conditions, changes in tax laws and other factors.

We have valuation allowance against deferred tax assets for the years ended December 31, 2015, 2014 and 2013. The decision to establish the valuation allowance in 2012 was due to negative evidence that includes our cumulative losses in U.S., Singapore and Taiwan after considering permanent tax differences and the passage of new California tax law requiring use of single sales factor which reduces the amount of California taxable income starting 2013.

In accordance with FASBs guidance on Accounting for Uncertainty in Income Taxes, we perform a comprehensive review of uncertain tax positions regularly. The guidance prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken, or expected to be taken, in a tax return. We determine the tax liability for uncertain tax positions based on a two-step process. The first step is to determine whether it is more likely than not based on technical merits that each income tax position would be sustained upon examination. The second step is to measure the tax benefit as the largest amount that has a greater than 50% likelihood of being realized upon ultimate settlement with a tax authority that has full knowledge of all relevant information. The assessment of each tax position requires significant judgment and estimates. We believe our tax return positions are fully supported, but tax authorities could challenge certain positions, which may not be fully sustained. All tax positions are periodically analyzed and adjusted as a result of events, such as the resolution of tax audits, issuance of new regulations or new case law, negotiations with tax authorities, and expiration of statutes of limitations.

Results of Operations and Key Operating Metrics

The following describes the line items in the statements of operations, which we consider to be our key operating metrics.

Revenue. We generate revenue from sales of our semiconductor products to end customers. A portion of our products is sold indirectly to customers through distributors.

We design and develop high-speed analog semiconductor solutions for the communications and computing markets. Our revenue is driven by various trends in these markets. These trends include the deployment and broader market adoption of next generation 100G technologies in communications and enterprise networks, the timing of next generation network and enterprise server upgrades in different geographic locations worldwide, the introduction and broader market adoption of next generation server platforms such as Intel's Haswell-based platform, and the deployment of high-speed memory interfaces in server and computing platforms.

Our revenue is also impacted by changes in the number and average selling prices of our semiconductor products. Our products are typically characterized by a life cycle that begins with higher average selling prices and lower volumes, followed by broader market adoption, higher volumes, and average selling prices that are lower than initial levels.

We operate in industries characterized by rapidly changing technologies and industry standards as well as technological obsolescence. Our revenue growth is dependent on our ability to continually develop and introduce new products to meet the changing technology and performance requirements of our customers, diversify our revenue base and generate new revenue to replace, or build upon, the success of previously introduced products which may be rapidly maturing. As a result, our revenue is impacted to a more significant extent by product life cycles for a variety of products and to a much lesser extent, if any, by any single product. In 2011, we began to ship in production volume a new "ultra-low voltage" version of our integrated PLL and register buffer, which is shipping in the form of product number INSSTE32882UV-GS02, or the GS02UV product. Sales of the GS02UV product comprised 15%, 39% and 45% of our total revenue in 2014, 2013 and 2012, respectively. In 2010, we introduced and began to ship in commercial volume a dual, differential linear TIA, which we identify as product number 2850TA-SO1D. Sales of 2850TA-SO1D product comprised 10% and 14% of our total revenue in 2013 and 2012, respectively. In 2012, we introduced and began to ship in commercial volume a dual, differential input linear transimpedance/variable-gain amplifier that we identify as product number IN3250TA-SO2D. Sales of IN3250TA-SO2D product comprised 14% of our total revenue in 2015 and 2014. In 2016, we expect that revenue from sales of IN3250TA-SO2D will be significant.

The following table is based on the geographic location to which our product is initially shipped. In most cases this will differ from the ultimate location of the end user of a product containing our technology. For sales to our distributors, their geographic location may be different from the geographic locations of the ultimate end customer. Sales by geography for the periods indicated were:

	Year Ended December 31,		
	2015	2014	2013
	(in thousands)		
China	$ 82,789	$ 54,312	$ 23,039
United States	41,185	22,918	22,389
Thailand	25,123	7,924	1,143
Korea	9,510	10,123	21,818
Other	88,009	60,865	34,275
	$ 246,616	$ 156,142	$ 102,664

In 2013, we were shipping products to a customer in Korea. However, in 2014, this customer requested to ship majority of the products to their facility in China, which resulted in a significant shift in revenue between China and Korea. In addition, the increase in shipments to China was due to revenue generated from Cortina during the fourth quarter of 2014 and year ended December 31, 2015.

Cost of revenue. Cost of revenue includes cost of materials such as wafers processed by third-party foundries, costs associated with packaging and assembly, test and shipping, cost of personnel, including stock-based compensation, as well as equipment associated with manufacturing support, logistics and quality assurance, warranty costs, write down of inventories, amortization of production mask costs, amortization of developed technology, amortization of step-up values of inventory, overhead and other indirect costs, such as allocated occupancy and information technology, or IT, costs.

As some semiconductor products mature and unit volumes increase, their average selling prices may decline. These declines are often paired with improvements in manufacturing yields and lower wafer, assembly and test costs, which offset some of the margin reduction that results from lower prices. However, our gross profit, period over period, may fluctuate as a result of changes in average selling prices due to new product introductions or existing product transitions into larger scale commercial volumes, manufacturing costs as well as our product mix.

Research and development. Research and development expense includes personnel-related expenses, including salaries, stock-based compensation and employee benefits. It also includes pre-production engineering mask costs, software license expenses, prototype wafer, packaging and test costs, design and development costs, testing and evaluation costs, third-party fees paid to consultants, depreciation expense, allocated facilities costs and other indirect costs. All research and development costs are expensed as incurred. We enter into development agreements with some of our customers. Recoveries from nonrecurring engineering services related to early stage technology are recorded as an offset to product development expense incurred in support of this effort and serve as a mechanism to partially recover development expenditures. These reimbursements are recognized upon completion and acceptance by the customer of contract deliverables or milestones. We expect research and development expense to increase in absolute dollars as we continue to invest resources to develop more products and enhance our existing product portfolio.

Sales and marketing. Sales and marketing expense consists primarily of salaries, stock-based compensation, employee benefits, travel, promotions, trade shows, marketing and customer support, commission payments to employees, depreciation expense and other indirect costs. We expect sales and marketing expense to increase in absolute dollars to support the growth of our business and promote our products to current and potential customers.

General and administrative. General and administrative expense consists primarily of salaries, stock-based compensation, employee benefits and expenses for executive management, legal, and finance. In addition, general and administrative expenses include fees for professional services and other indirect costs. We expect general and administrative expense to increase in absolute dollars due to the general growth of our business and the costs associated with becoming a public company for, among other things, SEC reporting and compliance, director fees, insurance, transfer agent fees and similar expenses.

Provision (benefit) for income taxes. For the year ended December 31, 2013, we recorded provision for income taxes of $1.8 million, which reflects an effective tax rate of 15%. The effective tax rate of 15% differs from the statutory rate of 34% primarily due to the an increase in valuation allowance, foreign income taxes provided at lower rates, geographic mix in profitability, unrecognized tax benefits and recognition of research and development credits. For the year ended December 31, 2014, we recorded provision for income taxes of $1.7 million, which reflects an effective tax rate of 8%. The effective tax rate of 8% differs from the statutory rate of 34% primarily due to increase in valuation allowance, foreign income taxes provided at lower rates, geographic mix in profitability, unrecognized tax benefits, transaction cost adjustment and recognition of research and development credits. For the year ended December 31, 2015, we recorded provision for income taxes of $8.0 million, which reflects an effective tax rate of (143%). The effective tax rate of (143%) differs from the statutory rate of 34% primarily due to change in valuation allowance, foreign income taxes provided at lower rates, geographic mix in profitability, unrecognized tax benefits, stock-based compensation adjustments, taxation of Subpart F income, and recognition of research and development credits.

The following table sets forth a summary of our statement of operations for the periods indicated:

	Year Ended December 31,		
	2015	2014	2013
		(in thousands)	
Total revenue	$ 246,616	$ 156,142	$ 102,664
Cost of revenue	98,294	70,488	37,095
Gross profit	148,322	85,654	65,569
Operating expense:			
Research and development	106,444	70,863	50,516
Sales and marketing	26,563	20,003	15,741
General and administrative	20,322	16,153	11,614
Total operating expenses	153,329	107,019	77,871
Loss from operations	(5,007)	(21,365)	(12,302)
Interest expense	(783)	—	—
Other income	221	495	876
Loss before income taxes	(5,569)	(20,870)	(11,426)
Provision for income taxes	7,982	1,738	1,752
Net loss	$ (13,551)	$ (22,608)	$ (13,178)

The following table sets forth a summary of our statement of operations as a percentage of each line item to the revenue:

	Year Ended December 31,		
	2015	2014	2013
Total revenue	100%	100%	100%
Cost of revenue	40	45	36
Gross profit	60	55	64
Operating expense:			
Research and development	43	45	49
Sales and marketing	11	13	16
General and administrative	8	10	11
Total operating expenses	62	68	76
Loss from operations	(2)	(13)	(12)
Interest expense	—	—	—
Other income	—	—	1
Loss before income taxes	(2)	(13)	(11)
Provision for income taxes	3	1	2
Net loss	(5)%	(14)%	(13)%

Comparison of the Years Ended December 31, 2015, 2014 and 2013

Revenue

	Year Ended December 31,			Change			
				2015		2014	
	2015	2014	2013	Amount	%	Amount	%
	(dollars in thousands)						
Total revenue	$ 246,616	$ 156,142	$ 102,664	$ 90,474	58%	$ 53,478	52%

Total revenue for the year ended December 31, 2015 increased by $90.5 million due to a year over year increase in average selling price of 46% and an increase in the number of units sold of 8%. The increases in average selling price and number of units sold was due to product mix, mainly from sales of our higher priced products including dual linear TIA, quad linear driver products, iPHY products, and high-speed interconnect and optical transport products from the Cortina acquisition.

Total revenue for the year ended December 31, 2014 increased by $53.5 million due to a year over year increase in average selling price of 63%, partially offset by a decrease in the number of units sold of 7%. The increase in average selling price was due to product mix, mainly from sales of our higher priced products including dual linear TIA, quad linear driver products, iMB™, high-speed interconnect and optical transport products. For the year ended December 31, 2014, the number of units sold decreased by 7% mainly from decrease in consumption of our other high speed memory interface products. We believe the reduction in the unit consumption of high speed memory is the natural result of migration to higher capacity DiMM cards at economic prices made possible in part by the availability of higher capacity DRAM at economic prices. In effect, a requirement for the same or more memory capacity can now be placed on a single card, thereby naturally absorbing the same or more aggregate memory requirement into a smaller number of cards.

Cost of Revenue and Gross Profit

	Year Ended December 31,			Change			
				2015		2014	
	2015	2014	2013	Amount	%	Amount	%
	(dollars in thousands)						
Cost of revenue	$ 98,294	$ 70,488	$ 37,095	$ 27,806	39%	$ 33,393	90%
Gross profit	148,322	85,654	65,569	62,668	73%	20,085	31%
Gross profit as a percentage of revenue	60%	55%	64%	—	5%	—	(9%)

Cost of revenue and gross profit for the year ended December 31, 2015 increased by $27.8 million and $62.7 million, respectively, compared to the prior year primarily due to increase in revenue from sales our dual linear TIA, quad linear driver products, iPHY products and high-speed interconnect and optical transport products which generated higher margin, amortization of inventory step-up related to the acquired Cortina inventories and amortization of acquired intangibles. Gross profit as a percentage of revenue increased due to sale of high margin products as discussed above and lower amortization of inventory fair value step-up related to the acquired Cortina inventories of $4.0 million, offset by increase of amortization of acquired intangibles by $8.6 million.

Cost of revenue and gross profit for the year ended December 31, 2014 increased by $33.4 million and $20.1 million, respectively, compared to the prior year primarily due to increase in revenue from sales our dual linear TIA, quad linear driver products, iMB™, high-speed interconnect and optical transport products which generated higher margin. Gross profit as a percentage of revenue decreased due to the amortization of inventory fair value step-up related to the acquired Cortina inventories sold during the fourth quarter of 2014 and amortization of the acquired intangibles.

Research and Development

	Year Ended December 31,			Change			
				2015		2014	
	2015	2014	2013	Amount	%	Amount	%
	(dollars in thousands)						
Research and development	$ 106,444	$ 70,863	$ 50,516	$ 35,581	50%	$ 20,347	40%

Research and development expense for the year ended December 31, 2015 increased by $35.6 million due to the increase in research and development headcount from new employees hired in 2015 and as a result of the acquisition of Cortina, which resulted in a $18.5 million and $4.5 million increase in personnel costs and stock-based compensation expense, respectively. CAD software tool license expense increased by $4.5 million, primarily due to an increase in headcount and engineering activities. In addition, external test services, pre-production engineering mask costs and laboratory supplies increased by $1.4 million. We abandoned the project related to in-process research and development costs which resulted in an impairment charge of $1.8 million. Depreciation and allocated expenses increased by $5.4 million, primarily, due to an increase in equipment and research and development activities. The increases were partially offset by decrease in third-party consultants by $0.9 million due to increase in employees. The increase in research and development expense was primarily driven by acquisition of Cortina and our strategy to continue to expand our product offerings and enhance our existing products.

Research and development expense for the year ended December 31, 2014 increased by $20.3 million due to the increase in research and development headcount from new employees hired in 2014 and as a result of the acquisition of Cortina, which resulted in a $12.9 million and $3.8 million increase in personnel costs and stock-based compensation expense, respectively. Consulting fees and CAD software tool license expense increased by $2.2 million and $2.0 million, respectively, primarily due to an increase in headcount and engineering activities. In addition, external test services and pre-production engineering mask costs increased by $2.0 million. Depreciation and allocated expenses increased by $5.2 million, primarily, due to an increase in equipment and research and development activities. The increases were partially offset by higher reimbursement from customers related to research and development contracts of $9.3 million due to new development contracts entered with the customers in 2014. The increase in research and development expense was primarily driven by acquisition of Cortina and our strategy to continue to expand our product offerings and enhance our existing products.

Sales and Marketing

	Year Ended December 31,			Change			
				2015		2014	
	2015	2014	2013	Amount	%	Amount	%
	(dollars in thousands)						
Sales and marketing	$ 26,563	$ 20,003	$ 15,741	$ 6,560	33%	$ 4,262	27%

Sales and marketing expense for the year ended December 31, 2015 increased by $6.6 million, primarily due to an increase in personnel costs, including stock-based compensation expense of $3.8 million, to support increasing sales activities from new developed products and from the Cortina acquisition. Commission expense increased by $1.7 million due to higher compensation and higher revenue. In addition, amortization of intangible related to Cortina acquisition increased by $0.6 million.

Sales and marketing expense for the year ended December 31, 2014 increased by $4.3 million, primarily due to an increase in personnel costs, including stock-based compensation expense of $3.2 million, to support increasing sales activities from new developed products and from the Cortina acquisition.

General and Administrative

	Year Ended December 31,			Change			
				2015		2014	
	2015	2014	2013	Amount	%	Amount	%
	(dollars in thousands)						
General and administrative	$ 20,322	$ 16,153	$ 11,614	$ 4,169	26%	$ 4,539	39%

General and administrative expenses for the year ended December 31, 2015 increased primarily due to personnel costs and stock-based compensation expense increased by $2.1 million due to new hires from Cortina and stock grants awarded. Amortization of intangibles and accounting and consultant fees increased by $0.3 million and $0.5 million due to the Cortina acquisition. In addition, we incurred a loss of $0.5 million from the disposal of certain property and equipment from the Cortina acquisition.

General and administrative expenses for the year ended December 31, 2014 increased primarily due to increase in outside legal fees of $1.8 million in connection with the acquisition of Cortina. In addition, personnel costs and stock-based compensation expense increased by $1.6 million due to new hires from Cortina and stock grants awarded in 2014.

Provision for Income Taxes

	Year Ended December 31,			Change			
				2015		2014	
	2015	2014	2013	Amount	%	Amount	%
	(dollars in thousands)						
Provision for income taxes......................	$ 7,982	$ 1,738	$ 1,752	$ 6,244	359%	$ (14)	—

For the year ended December 31, 2015, we recorded provision for income taxes of $8.0 million, which reflects an effective tax rate of (143%). The effective tax rate of (143%) differs from the statutory rate of 34% primarily due to change in valuation allowance, foreign income taxes provided at lower rates, geographic mix in profitability, unrecognized tax benefits, stock-based compensation adjustments, taxation of Subpart F income and recognition of research and development credits.

For the year ended December 31, 2014, we recorded a provision for income taxes of $1.7 million, which reflects an effective tax rate of 8%. The effective tax rate of 8% differs from the statutory rate of 34% primarily due to the change in valuation allowance, foreign income taxes provided at lower rates, geographic mix in profitability, unrecognized tax benefits, transaction costs adjustments and recognition of research and development credits.

For the year ended December 31, 2013, we recorded a provision for income taxes of $1.8 million, which reflects an effective tax rate of 15%. The effective tax rate of 15% differs from the statutory rate of 34% primarily due to the change in valuation allowance, foreign income taxes provided at lower rates, geographic mix in profitability, unrecognized tax benefits and recognition of research and development credits.

We operate under tax holiday in Singapore, which is effective through May 2020. The tax holiday is conditional upon our meeting certain employment, activities and investment thresholds. As of December 31, 2015, we believe we met all the thresholds. There was no impact of the Singapore tax holiday on our Singapore taxes in 2015, 2014 and 2013. The benefit of tax holidays has no material impact on diluted earnings per share.

Liquidity and Capital Resources

As of December 31, 2015, we had cash and cash equivalents and investments in marketable securities of $326.7 million. Our primary uses of cash are to fund operating expenses, purchase inventory and acquire property and equipment. Cash used to fund operating expenses is impacted by the timing of when we pay these expenses, as reflected in the changes in our outstanding accounts payable and accrued expenses. Our primary sources of cash are cash receipts on accounts receivable from our revenue. In 2015, we issued convertible debt, which resulted in an increase in cash and cash equivalents. Aside from the growth in amounts billed to our customers, net cash collections of accounts receivable are impacted by the efficiency of our cash collections process, which can vary from period to period, depending on the timing of shipments and payment cycles of our major customers.

The following table summarizes our cash flows for the periods indicated:

	Years Ended December 31,		
	2015	2014	2013
	(in thousands)		
Net cash provided by operating activities	$ 68,238	$ 8,386	$ 18,658
Net cash used in investing activities	(23,871)	(11,744)	(20,098)
Net cash provided by financing activities	208,311	2,057	2,946
Net increase (decrease) in cash and cash equivalents	$ 252,678	$ (1,301)	$ 1,506

Net Cash Provided by Operating Activities

Net cash provided by operating activities in 2015 primarily reflected depreciation and amortization of $26.9 million, stock-based compensation of $28.3 million, loss on disposal and abandonment of property and equipment of $1.9 million, impairment of in-process research and development of $1.8 million, amortization of deferred tax charge of $0.9 million, amortization of premiums on marketable securities of $0.5 million, accretion of convertible debt of $0.6 million, decreases in accounts receivable by $6.5 million, inventories of $8.8 million, prepaid expenses and other assets of $2.2 million, change in income tax payable/receivable by $6.4 million, increase in accrued expenses by $3.4 million offset by net loss of $13.6 million, excess tax benefit related to stock-based compensation of $4.3 million and decrease in other liabilities of $1.4 million. Our accounts receivable decreased due to collections from customers. Our inventories decreased due to shipments to customers and amortization of fair value step-up on Cortina inventories. Our prepaid expenses and other current assets decreased due to settlement of a non-trade receivable. Our accrued expenses increased due to accrual of employee related expenses. Other liabilities decreased due to deposits received from customers used in 2015 and decrease in deferred rent on building leases.

Net cash provided by operating activities in 2014 primarily reflected depreciation and amortization of $10.9 million, stock-based compensation of $22.5 million, abandonment of assets of $1.2 million, amortization of intangibles of $3.2 million, amortization of deferred tax charge of $0.9 million, amortization of premiums on marketable securities of $0.8 million, decrease in inventories of $10.1 million and increase in deferred revenue of $5.4 million offset by net loss of $22.6 million, increase in accounts receivable by $8.7 million, increase in prepaid expenses by $3.3 million, decrease in accounts payable and accrued expenses by $10.3 million and decrease in other liabilities of $1.7 million. Our inventories, net of acquired inventories from Cortina acquisition decreased due to shipments to customers. Our deferred revenue increased due to acquisition of Cortina and distributors increased their inventory level for shipment to customers in the first quarter of 2015. Accounts receivable increased due to higher shipments made in the last month of the quarter, including Cortina's products. Our prepaid expenses and other assets increased as a result of new subscriptions with vendors and related prepayments. Our accounts payable and accrued expenses, net of assumed liabilities from Cortina acquisition, decreased due to payment to vendors and employees. Other liabilities decreased due to amortization of advance payment received from a customer in 2013.

Net cash provided by operating activities in 2013 primarily reflected depreciation and amortization of $7.5 million, stock-based compensation of $17.0 million, impairment charge of $0.5 million, amortization of deferred tax charge of $0.9 million, amortization of premiums on marketable securities of $1.0 million, change in income tax receivable/payable by $3.0 million, increase in accounts payable and accrued expenses of $2.0 million, increase in deferred revenue of $0.6 million and other liabilities of $1.3 million offset by net loss of $13.2 million and increase in inventories of $1.9 million. Our accounts payable and accrued expenses increased as a result of increased production volume and employee related expenses. Our deferred revenue increased as distributors increased their inventory level for shipment to customers in the first quarter of 2014. Other liabilities increased due to advance payment received from a customer, which will be used in 2014. Our inventories increased a result of growing production for expected delivery to customers in the first quarter of 2014.

Net Cash Used in Investing Activities

In 2015, net cash used in investing activities consisted of cash used to purchase investment in marketable securities of $21.9 million, purchases of property and equipment of $16.6 million, mainly for laboratory, production and computer equipment and software and purchase of minority interest in an early stage private company for $2.0 million offset by sales and maturities of marketable securities of $16.5 million.

In 2014, net cash used in investing activities consisted of cash used to purchase investment in marketable securities of $38.6 million, acquisition of Cortina of $35.3 million, net of cash acquired, purchases of property and equipment of $21.2 million, mainly for laboratory, production and computer equipment and leasehold improvements for our offices, purchase of minority interest in an early stage private company for $5.0 million and purchase of patents for $1.6 million offset by sales and maturities of marketable securities of $89.9 million.

In 2013, net cash used in investing activities consisted of cash used to purchase investment in marketable securities of $43.1 million, purchases of property and equipment of $16.6 million, mainly for laboratory and production equipment and leasehold improvements for our offices in California, purchase of minority interest in an early stage private company for $2.6 million offset by sales and maturities of marketable securities of $42.2 million.

Net Cash Provided by Financing Activities

Net cash provided by financing activities in 2015, consisted primarily of net proceeds from issuance of convertible debt of $224 million, proceeds from the exercise of stock options and employee stock purchase plan of $10.7 million and excess tax benefit related to stock-based compensation of $4.3 million. This was offset, in part, by the purchase of capped call options related to convertible debt issued of $17.8 million and minimum tax withholding paid on behalf of employees for net share settlement of $12.9 million.

Net cash provided by financing activities in 2014, consisted primarily of proceeds from the exercise of stock options and employee stock purchase plan of $7.0 million. This was offset, in part, by the minimum tax withholding paid on behalf of employees for net share settlement of $5.0 million.

Net cash provided by financing activities in 2013, consisted primarily of proceeds from the exercise of stock options and employee stock purchase plan of $5.1 million. This was offset, in part, by the minimum tax withholding paid on behalf of employees for net share settlement of $2.2 million.

Operating and Capital Expenditure Requirements

Our principal source of liquidity as of December 31, 2015 consisted of $326.7 million of cash, cash equivalents and investments in marketable securities. Based on our current operating plan, we believe that our existing cash and cash equivalents and investments in marketable securities from operations will be sufficient to finance our operational cash needs through at least the next 12 months. In the future, we expect our operating and capital expenditures to increase as we increase headcount, expand our business activities and grow our end customer base which will result in higher needs for working capital. Our ability to generate cash from operations is also subject to substantial risks described in Part I, “Item 1A., Risk Factors.” If any of these risks occur, we may be unable to generate or sustain positive cash flow from operating activities. We would then be required to use existing cash and cash equivalents to support our working capital and other cash requirements. If additional funds are required to support our working capital requirements, acquisitions or other purposes, we may seek to raise funds through debt financing or from other sources. If we raise additional funds through the issuance of equity or convertible debt securities, the percentage ownership of our stockholders could be significantly diluted, and these newly-issued securities may have rights, preferences or privileges senior to those of existing stockholders. If we raise additional funds by obtaining loans from third parties, the terms of those financing arrangements may include negative covenants or other restrictions on our business that could impair our operating flexibility, and would also require us to incur interest expense. We can provide no assurance that additional financing will be available at all or, if available, that we would be able to obtain additional financing on terms favorable to us.

Contractual Obligations, Commitments and Contingencies

The following table summarizes our outstanding contractual obligations as of December 31, 2015:

	Payments due by period				
	Total	Less Than 1 Year	1-3 Years	3-5 Years	More Than 5 Years
			(in thousands)		
Convertible debt	$ 230,000	—	—	$ 230,000	—
Operating lease obligations	23,093	14,660	6,551	1,882	—

As of December 31, 2015, we recorded a liability for our uncertain tax position of $7.0 million. We are unable to reasonably estimate the timing of payments in individual years due to uncertainties in the timing of the effective settlement of tax positions.

We depend upon third party subcontractors to manufacture our wafers. Our subcontractor relationships typically allow for the cancellation of outstanding purchase orders, but require payment of all expenses incurred through the date of cancellation. As of December 31, 2015, the total value of open purchase orders for wafers was approximately $5.3 million.

Off-Balance Sheet Arrangements

Since our inception, we have not engaged in any off-balance sheet arrangements, such as the use of structured finance, special purpose entities or variable interest entities.

Recent Authoritative Accounting Guidance

See Note 1 of the notes to our consolidated financial statements for information regarding recently issued accounting pronouncements.

ITEM 7A. *QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK*

Interest Rate Sensitivity

We had cash and cash equivalents and investments in marketable securities of $326.7 and $69.3 million at December 31, 2015 and December 31, 2014, respectively, which was held for working capital purposes. Our exposure to market interest-rate risk relates primarily to our investment portfolio. We do not use derivative financial instruments to hedge the market risks of our investments. We manage our total portfolio to encompass a diversified pool of investment-grade securities to preserve principal and maintain liquidity. We place our investments with high-quality issuers, money market funds and debt securities. Our investment portfolio as of December 31, 2015 consisted of money market funds, U.S. Treasuries, municipal bonds, corporate bonds, government agency bonds and asset backed securities. Investments in both fixed rate and floating rate instruments carry a degree of interest rate risk. Fixed rate securities may have their market value adversely impacted due to an increase in interest rates, while floating rate securities may produce less income than expected if interest rates fall. Due in part to these factors, our future investment income may fall short of expectations due to changes in interest rates or if the decline in fair value of our publicly traded debt investments is judged to be other-than-temporary. We may suffer losses in principal if we are forced to sell securities that have declined in market value due to changes in interest rates. However, because any debt securities we hold are classified as available-for-sale, no gains or losses are realized in the income statement due to changes in interest rates unless such securities are sold prior to maturity or unless declines in value are determined to be other-than-temporary. These securities are reported at fair value with the related unrealized gains and losses, net of applicable taxes, included in accumulated other comprehensive income (loss), reported in a separate component of stockholders' equity. Although, we currently expect that our ability to access or liquidate these investments as needed to support our business activities will continue, we cannot ensure that this will not change. We believe that, if market interest rates were to change immediately and uniformly by 10% from levels at December 31, 2015, the impact on the fair value of these securities or our cash flows or income would not be material.

In a declining interest rate environment, as short-term investments mature, reinvestment occurs at less favorable market rates. Given the short-term nature of certain investments, the current interest rate environment may negatively impact our investment income.

As of December 31, 2015, we had outstanding debt of $230 million in the form of Convertible Notes. The fair value of our Convertible Notes is subject to interest rate risk, market risk and other factors due to the convertible feature. The fair value of the Convertible Notes will generally increase as interest rates fall and decrease as interest rates rise. In addition, the fair value of the Convertible Notes will generally increase as our common stock price increases and will generally decrease as our common stock price declines in value. The interest and market value changes affect the fair value of our Convertible Notes but do not impact our financial position, cash flows or results of operations due to the fixed nature of the debt obligation.

Our cash and cash equivalents and investment in marketable securities at December 31, 2015 consisted of $297.4 million held domestically, with the remaining balance of $29.3 million held by foreign subsidiaries. There may be adverse tax effects upon repatriation of these funds to the United States. We do not plan to repatriate cash balances from foreign subsidiaries to fund our operations in the United States.

Foreign Currency Risk

To date, our international customer and vendor agreements have been denominated almost exclusively in United States dollars. Accordingly, we have limited exposure to foreign currency exchange rates and currently enter into immaterial foreign currency hedging transactions.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Stockholders of Inphi Corporation:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of operations, comprehensive income (loss), stockholders' equity and cash flows present fairly, in all material respects, the financial position of Inphi Corporation and its subsidiaries at December 31, 2015 and 2014, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2015 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2015, based on criteria established in *Internal Control - Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Annual Report on Internal Control over Financial Reporting appearing under Item 9A. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

The accompanying notes are an integral part of these consolidated financial statements.

1. Organization and Summary of Significant Accounting Policies

Inphi Corporation (the "Company"), a Delaware corporation, was incorporated in November 2000. The Company is a fabless provider of high-speed analog and mixed signal semiconductor solutions for the communications, datacenter and computing markets. The Company's semiconductor solutions are designed to address bandwidth bottlenecks in networks, maximize throughput and minimize latency in computing environments and enable the rollout of next generation communications, datacenter and computing infrastructures. In addition, the semiconductor solutions provide a vital high-speed interface between analog signals and digital information in high-performance systems such as telecommunications transport systems, enterprise networking equipment, datacenter and enterprise servers, storage platforms, test and measurement equipment and military systems.

On October 3, 2014, the Company completed the acquisition of Cortina Systems, Inc. including its high-speed interconnect and optical transport product lines (Cortina) for approximately $52,509 in cash and approximately 5.3 million shares of the Company's common stock in accordance with the Agreement and Plan of Merger dated July 30, 2014 as amended by Amendment No. 1 to the Agreement and Plan of Merger dated September 25, 2014. The revenue and expenses of Cortina are included in the consolidated statement of income for the years ended December 31, 2014 and 2015.

The Company is subject to certain risks and uncertainties and believes changes in any of the following areas could have a material adverse effect on the Company's future financial position or results of operations or cash flows: ability to sustain profitable operations due to history of losses and accumulated deficit, dependence on limited number of customers for a substantial portion of revenue, product defects, risks related to intellectual property matters, lengthy sales cycle and competitive selection process, lengthy and expensive qualification process, ability to develop new or enhance products in a timely manner, market development of and demand for the Company's products, reliance on third parties to manufacture, assemble and test products and ability to compete.

Basis of Presentation

The accompanying consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States of America ("GAAP") and include the accounts of Inphi, Cortina and subsidiaries. All significant intercompany balances and transactions have been eliminated in consolidation.

Business Combinations

The Company accounts for acquisitions of business using the purchase method of accounting, which requires the Company to recognize separately from goodwill the assets acquired and the liabilities assumed at their acquisition date fair values. While the Company uses its best estimates and assumptions to accurately value assets acquired and liabilities assumed at the acquisition date as well as contingent consideration, where applicable, the estimates are inherently uncertain and subject to refinement. As a result, during the measurement period, which may be up to one year from the acquisition date, the Company may record adjustments to the assets acquired and liabilities assumed with the corresponding offset to goodwill. Upon the conclusion of the measurement period or final determination of the values of assets acquired or liabilities assumed, whichever comes first, any subsequent adjustments are recorded to the consolidated statements of operations.

Accounting for business combinations requires management to make significant estimates and assumptions, especially at the acquisition date including the Company's estimates for intangible assets, contractual obligations assumed and pre-acquisition contingencies where applicable. Although, the Company believes the assumptions and estimates made in the past have been reasonable and appropriate, they are based in part on historical experience and information obtained from the management of the acquired companies and are inherently uncertain. Critical estimates in valuing certain of the intangible assets the Company acquired include future expected cash flows from product sales, customer contracts and acquired technologies, expected costs to develop in-process research and development (IPR&D) into commercially viable products and estimated cash flows from the projects when completed and discount rates. Unanticipated events and circumstances may occur that may affect the accuracy or validity of such assumptions, estimates or actual results.

Use of Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

On an ongoing basis, management evaluates its estimates, including those related to (i) the collectibility of accounts receivable and allowance for distributors' price discounts; (ii) write down for excess and obsolete inventories; (iii) warranty obligations; (iv) the value assigned to and estimated useful lives of long-lived assets; (v) the realization of tax assets and estimates of tax liabilities and tax reserves; (vi) the valuation of equity securities; (vii) amounts recorded in connection with acquisitions; (viii) recoverability of intangible assets and goodwill and (ix) the recognition and disclosure of fair value of convertible debt and contingent liabilities. These estimates are based on historical data and experience, as well as various other factors that management believes to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets and liabilities that are not readily apparent from other sources. The Company engages third party valuation specialists to assist with estimates related to the valuation of financial instruments and assets associated with various contractual arrangements, and valuation of assets acquired in connection with acquisitions. Such estimates often require the selection of appropriate valuation methodologies and models, and significant judgment in evaluating ranges of assumptions and financial inputs. Actual results may differ from those estimates under different assumptions or circumstances.

Foreign Currency Translation

The Company and its subsidiaries use the U.S. dollar as its functional currency. Foreign currency assets and liabilities are remeasured into U.S. dollars at the end-of-period exchange rates except for non-monetary assets and liabilities, which are remeasured at historical exchange rates. Revenue and expenses are remeasured at the exchange rate in effect during the period the transaction occurred, except for those expenses related to balance sheet amounts, which are remeasured at historical exchange rates. Gains or losses from foreign currency transactions are included in the Consolidated Statements of Operations as part of "Other income (expense)". Foreign currency gain (loss) in 2015, 2014 and 2013 were ($524), ($136) and $16, respectively.

Cash and Cash Equivalents

The Company considers all highly liquid investments with an original or remaining maturity of three months or less at the date of purchase to be cash equivalents. The Company maintains its cash and cash equivalents with major financial institutions and, at times, such balances with any one financial institution may exceed Federal Deposit Insurance Corporation insurance limits. Cash equivalents primarily consist of money market funds.

Fair Market Value of Financial Instruments

The carrying amount reflected in the balance sheet for cash and cash equivalents, accounts receivable, prepaid and other current assets, accounts payable, accrued expenses and other current liabilities, approximate fair value due to the short-term nature of these financial instruments.

Investments in Marketable Securities

Investments in marketable securities consist of available-for-sale securities. These investments are recorded at fair value with changes in fair value, net of applicable taxes, recorded as unrealized gains (losses) as a component of accumulated other comprehensive income in stockholders' equity. Realized gains and losses and declines in value judged to be other-than-temporary on available-for-sale securities are included in Other (expense) income, net. The cost basis for realized gains and losses on available-for-sale securities is determined on a specific identification basis. Investments are made based on the Company's investment policy which restricts the types of investments that can be made. The Company classified available-for-sale securities as short-term as the investments are available to be used in current operations.

Inventories

Inventories are stated at the lower of cost or market. Cost is computed using standard cost, which approximates actual cost, on a first-in, first-out basis. Inventories are reduced for write downs based on periodic reviews for evidence of slow-moving or obsolete parts. The write-down is based on comparison between inventory on hand and estimated future sales for each specific product. Once written down, inventory write downs are not reversed until the inventory is sold or scrapped. Inventory write downs are also established when conditions indicate that the net realizable value is less than cost due to physical deterioration, obsolescence, changes in price level or other causes. Inventory valuation reserves were $4,608, and $1,949, as of December 31, 2015 and 2014, respectively.

Property and Equipment

Property and equipment are stated at cost less accumulated depreciation and amortization. Depreciation and amortization is provided on property and equipment over the estimated useful lives on a straight-line basis. Leasehold improvements are amortized on a straight-line basis over the shorter of their estimated useful lives or lease terms. Repairs and maintenance are charged to expense as incurred. Useful lives by asset category are as follows:

Asset Category	Years
Office equipment	3
Software	3
Leasehold improvements	Shorter of lease term or estimated useful life
Production equipment	2
Computer equipment	5
Lab equipment	5
Furniture and fixtures	7

Equipment Under Capital Leases

The Company leases certain of its equipment under capital lease agreements. The assets and liabilities under capital leases are initially recorded at the fair value of the assets under lease. The capital lease obligation outstanding at December 31, 2014 was $142, paid in 2015.

Intangible Assets

Intangible assets represent rights acquired for developed technology, customer relationships, trade mark, patents and IPR&D in connection with the acquisition of Cortina. Intangible assets with finite useful lives are amortized over periods ranging from five to ten years using a method that reflects the pattern in which the economic benefits of the intangible asset are consumed, or if that pattern cannot be reliably determined, using a straight-line amortization method. Acquired IPR&D is capitalized and amortization commences upon completion of the underlying projects. If any of the projects are abandoned, the Company would be required to impair the related IPR&D asset.

Impairment of Long-lived Assets and Goodwill

Long-lived Assets

The Company assesses the impairment of long-lived assets, which consist primarily of property and equipment and intangible assets, whenever events or changes in circumstances indicate that such assets might be impaired and the carrying value may not be recoverable. Events or changes in circumstances that may indicate that an asset is impaired include significant decreases in the market value of an asset, significant underperformance relative to expected historical or projected future results of operations, a change in the extent or manner in which an asset is utilized, significant declines in the estimated fair value of the overall Company for a sustained period, shifts in technology, loss of key management or personnel, changes in the Company's operating model or strategy and competitive forces.

If events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable and the expected undiscounted future cash flows attributable to the asset are less than the carrying amount of the asset, an impairment loss equal to the excess of the asset's carrying value over its fair value is recorded. Fair value is determined based on the present value of estimated expected future cash flows using a discount rate commensurate with the risk involved, quoted market prices or appraised values, depending on the nature of the assets.

Goodwill

Goodwill is recorded when the consideration paid for a business acquisition exceeds the fair value of net tangible and intangible assets acquired. Goodwill is measured and tested for impairment on an annual basis during the fourth fiscal quarter or more frequently if the Company believes indicators of impairment exist.

The performance of the test involves a two-step process. The first step requires comparing the fair value of the reporting unit to its net book value, including goodwill. As the Company has only one reporting unit, the fair value of the reporting unit is determined by taking the market capitalization of the Company as determined through quoted market prices and adjusted for control premiums and other relevant factors. A potential impairment exists if the fair value of the reporting unit is lower than its net book value. The second step of the process is only performed if a potential impairment exists, and it involves determining the difference between the fair value of the reporting unit's net assets other than goodwill and the fair value of the reporting unit. If the difference is less than the net book value of goodwill, impairment exists and is recorded. In the event that the Company determines that the value of goodwill has become impaired, the Company will record an accounting charge for the amount of impairment during the fiscal quarter in which the determination is made. The Company has not been required to perform this second step of the process because the fair value of the reporting unit has significantly exceeded its book value at every measurement date. The guidance also provides the option to first assess qualitative factors to determine whether the existence of events or circumstances leads to a determination that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If, after assessing the totality of events or circumstances, an entity determines it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, then performing the two-step impairment test is unnecessary. There was no impairment of goodwill in 2015, 2014 and 2013.

Internal Use Software Costs

Certain external computer software costs acquired for internal use are capitalized. Training costs and maintenance are expensed as incurred, while upgrades and enhancements are capitalized if it is probable that such expenditures will result in additional functionality. Capitalized costs are included within property and equipment.

Revenue Recognition

The Company's products are fully functional at the time of shipment and do not require additional production, modification, or customization. The Company recognizes revenue when there is persuasive evidence of an arrangement, delivery has occurred, the fee is fixed or determinable, and collection is reasonably assured. The Company's sales arrangements do not include multiple elements.

Product revenue is recognized upon shipment of product to customers, net of accruals for estimated sales returns and allowances, which to date, have not been significant. However, some of the Company's sales are made through distributors under arrangements that allow for price protection or rights of return on product unsold by the distributors. Product revenue on sales made through distributors with rights of return or price protection is deferred until the distributors sell the product to end customers. Sales to distributors are included in deferred revenue and the Company includes the related costs in inventory until sale to the end customers occurs. Price protection rights allow distributors the right to a credit in the event of declines in the price of the Company's product that they hold prior to the sale to an end customer. In the event that the Company reduces the selling price of products held by distributors, deferred revenue related to distributors with price protection rights is reduced upon notification to the customer of the price change. Additionally, certain distributors may receive a credit for the price discounts associated with the distributors' customers that purchased those products. The Company estimates the extent of these distributor price discounts at each reporting period to reduce accounts receivable and deferred revenue, but does not issue these discounts to the distributor until the inventory is sold to the distributors' customers. The Company's sales to direct customers are made primarily pursuant to standard purchase orders for delivery of products. The Company generally allows customers to cancel or change purchase orders within limited notice periods prior to the scheduled shipment.

The Company recognizes revenue from the sales and licensing of its intellectual property when the following fundamental criteria are met: (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred, (iii) the sales price is fixed or determinable, and (iv) collection of resulting receivables is reasonably assured.

Occasionally, the Company enters into development agreements with some of its customers and recognizes revenue from these agreements upon completion and acceptance by the customer of contract deliverables or as services are provided, depending on the terms of the arrangement. Revenue is deferred for any amounts billed or received prior to completion of milestones or delivery of services.

Revenue from non-product sales was less than 2% of total revenue for the year ended December 31, 2015.

Cost of Revenue

Cost of revenue includes cost of materials, such as wafers processed by third-party foundries, cost associated with packaging and assembly, test and shipping, cost of personnel, including stock-based compensation, and equipment associated with manufacturing support, logistics and quality assurance, warranty cost, amortization of developed technology, amortization of step-up values of inventory, write down of inventories, amortization of production mask costs, overhead and an allocated portion of occupancy costs.

Warranty

The Company's products are under warranty against defects in material and workmanship generally for a period of one or two years. The Company accrues for estimated warranty cost at the time of sale based on anticipated warranty claims and actual historical warranty claims experience including knowledge of specific product failures that are outside of the Company's typical experience. The warranty obligation is determined based on product failure rates, cost of replacement and failure analysis cost. If actual warranty costs differ significantly from these estimates, adjustments may be required in the future. As of both December 31, 2015 and 2014, the warranty liability was $110.

The following table sets forth changes in warranty accrual included in other accrued expenses in the Company's consolidated balance sheets:

	Year Ended December 31,		
	2015	2014	2013
Beginning balance	$ 110	$ 40	$ 40
Warranty liabilities assumed in acquisition	—	79	—
Settlements	—	(9)	—
	$ 110	$ 110	$ 40

On November 3, 2014, the Company received a claim notification from an insurance company asserting a claim of approximately $4,000 for field installation repair and replacement costs incurred by a customer in 2011. The Company believes that it had fulfilled its contractual obligation to provide warranty repair and replacement, but has referred the matter to its insurance carrier at the request of the insurance company. As of December 31, 2015, the Company believes that the liability under this claim is not probable. Nevertheless, resolutions of third-party claims are inherently uncertain and as such, an unfavorable outcome could ultimately impact the Company's business, cash flow and results of operations.

Research and Development Expense

Research and development expense consists of costs incurred in performing research and development activities including salaries, stock-based compensation, employee benefits, occupancy costs, pre-production engineering mask costs, overhead costs and prototype wafer, packaging and test costs. Research and development costs are expensed as incurred. The Company enters into development agreements with some of the Company's customers. Recoveries from nonrecurring engineering services from early stage technology are recorded as an offset to product development expense incurred in support of this effort and serve as a mechanism to partially recover development expenditures. These reimbursements are recognized upon completion and acceptance by the customer of contract deliverables or milestones. The Company recorded approximately $10,750, $10,250 and $1,000 as offset to research and development expense for the years ended December 31, 2015, 2014 and 2013, respectively.

Sales and Marketing Expense

Sales and marketing expense consists of salaries, stock-based compensation, employee benefits, travel and trade show costs. The Company expenses sales and marketing costs as incurred. Advertising expenses for the years ended December 31, 2015, 2014 and 2013 were not material.

General and Administrative Expense

General and administrative expense consists of salaries, stock-based compensation, employee benefits and expenses for executive management, legal and finance. In addition, general and administrative expense includes fees for professional services and occupancy costs. These costs are expensed as incurred.

Income Taxes

Deferred tax assets and liabilities are determined based on differences between financial reporting and tax bases of assets and liabilities, and are measured using the enacted tax rates and laws that will be in effect when the differences are expected to reverse. The Company must also make judgments in evaluating whether deferred tax assets will be recovered from future taxable income. To the extent that it believes that recovery is not likely, the Company must establish a valuation allowance. The carrying value of the Company's net deferred tax asset is based on whether it is more likely than not that the Company will generate sufficient future taxable income to realize these deferred tax assets. A valuation allowance is established for deferred tax assets which the Company does not believe meet the "more likely than not" criteria. The Company's judgments regarding future taxable income may change over time due to changes in market conditions, changes in tax laws, tax planning strategies or other factors. If the Company's assumptions and consequently its estimates change in the future, the valuation allowance the Company has established may be increased or decreased, resulting in a material respective increase or decrease in income tax expense (benefit) and related impact on the Company's reported net income (loss).

In accordance with FASBs guidance on Accounting for Uncertainty in Income Taxes, the Company performs a comprehensive review of uncertain tax positions regularly. In this regard, an uncertain tax position represents an expected treatment of a tax position taken in a filed tax return, or planned to be taken in a future tax return or claim, which has not been reflected in measuring income tax expense for financial reporting purposes. Until these positions are sustained by the taxing authorities, the Company does not recognize the tax benefits resulting from such positions and reports the tax effects as a liability for uncertain tax positions in the consolidated financial statements. The Company recognizes potential interest and penalties on uncertain tax positions within provision (benefit) for income taxes on the consolidated statement of operations.

Stock-Based Compensation

Stock-based compensation for stock option and restricted stock units issued to the Company's employees is measured at the grant date based on the fair value of the award and is recognized as expense over the requisite service period, which is the vesting period, on a straight-line basis. The fair value of restricted stock units is based on the fair market value of the Company's common stock on the date of grant. The Company uses the Black-Scholes option-pricing model for valuing stock option awards granted to employees and directors at the grant date. Determining the fair value of stock option awards at the grant date requires the input of various assumptions, including fair value of the underlying common stock, expected future share price volatility, expected term, risk-free interest rate and dividend rate. Changes in these assumptions can materially affect the fair value of the options. The Company based its estimate of expected volatility on the estimated volatility of similar entities whose share prices are publicly available. The risk-free interest rate is based on the U.S. Treasury yields in effect at the time of grant for periods corresponding to the expected life of the options. The weighted average expected life of options was calculated using the simplified method. This decision was based on the lack of relevant historical data due to the Company's limited experience. The expected dividend yield is zero because the Company has not historically paid dividends and has no present intention to pay dividends. The Company establishes the estimated forfeiture rates based on historical experience. The value of the portion of the award that is ultimately expected to vest is recognized as expense over the requisite service period which is equal to the vesting period.

The Company has elected to treat share-based payment awards with graded vesting schedules and time-based service conditions as single awards and recognizes stock-based compensation expense on a straight-line basis (net of estimated forfeitures) over the requisite service period.

The Company recognizes non-employee stock-based compensation expenses based on the estimated fair value of the equity instrument determined using the Black-Scholes option-pricing model. Management believes that the fair value of the stock options is more reliably measured than the fair value of the services received. The fair value of each non-employee variable stock award is re-measured each period until a commitment date is reached, which is generally the vesting date.

Earnings per Share

Basic earnings per share is calculated by dividing income allocable to common stockholders (after the reduction for any preferred stock dividends assuming current income for the period had been distributed) by the weighted average number of shares of common stock outstanding, net of shares subject to repurchase by the Company, during the period. Diluted earnings per share is calculated by dividing the net income allocable to common stockholders by the weighted average number of common shares outstanding, adjusted for the effects of potentially dilutive common stock, which are comprised of stock options, restricted stock units, employee share purchase plan and the shares that could be issued upon conversion of the Company's convertible debt. The capped call options in connection with the issuance of the convertible notes are excluded from the calculation of diluted earnings per share as their impact is always anti-dilutive.

Segment Information

The Company operates in one segment related to the design, development and sale of high speed analog connectivity components that operate to maintain, amplify and improve signal integrity at high speeds in a wide variety of applications. The Company's chief operating decision-maker is its Chief Executive Officer, who reviews operating results on an aggregate basis and manages the Company's operations as a single operating segment.

Recent Accounting Pronouncements

In May 2014, the Financial Accounting Standards Board (FASB) issued guidance on "Revenue from Contracts with Customers." The new revenue recognition guidance provides a five-step analysis of transactions to determine when and how revenue is recognized. The guidance requires an entity to recognize the amount of revenue to which it expects to be entitled for the transfer of promised goods or services to customers. The new guidance was initially effective for the Company on January 1, 2017. The new guidance permits the use of either the retrospective or cumulative effect transition method. The Company is evaluating the effect that the new revenue recognition guidance will have on the consolidated financial statements and related disclosures. The Company has not yet selected a transition method nor determined the effect of the standard on the ongoing financial reporting. In July 2015, the FASB voted to defer the effective date of the new revenue recognition standard by one year. The guidance may be adopted as early as January 1, 2017, the effective date of the original guidance.

In November 2014, the FASB, issued guidance to determine whether and at what threshold an acquired business or not-for-profit organization can apply pushdown accounting. This guidance provides an option to apply pushdown accounting in the separate financial statements of an acquired entity upon the occurrence of an event in which an acquirer obtains control of the acquired entity. The guidance is effective on November 18, 2014. After the effective date, an acquired entity can make an election to apply the guidance to future change-in-control events or to its most recent change-in-control event. However, if the financial statements for the period in which the most recent change-in-control event occurred already have been issued or made available to be issued, the application of this guidance would be a change in accounting principle. The adoption of this guidance did not impact the consolidated financial statements.

In April 2015, the FASB issued guidance that requires an entity to present debt issuance costs on the balance sheet as a direct deduction from the related debt liability as opposed to an asset. Amortization of the costs will continue to be reported as interest expense. The update is effective for annual reporting periods beginning after December 15, 2015. Early adoption is permitted for financial statements that have not been previously issued, and the new guidance would be applied retrospectively to all prior periods presented. The Company has early adopted the standard in the year ended December 31, 2015. There was no impact to prior period consolidated financial statements.

In July 2015, the FASB issued guidance applying to inventory measured using any other method other than last-in, last-out method. Under this guidance inventory is measured at the lower of cost and net realizable value. The net realizable value is the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation. The guidance is applied prospectively and is effective for the Company beginning January 1, 2017. Early adoption is permitted. The adoption of this standard is not expected to have a material impact on the Company's consolidated financial statements and related disclosures.

In September 2015, the FASB issued guidance that requires an acquirer in a business combination to recognize adjustments to provisional amounts that are identified during the measurement period in the reporting period in which the adjustment amounts are determined. The guidance also requires disclosure of the effect on earnings of changes in depreciation, amortization or other income effects, if any, as a result of the adjustment to the provisional amounts, calculated as if the accounting had been completed at the acquisition date. This guidance is effective for the Company beginning January 1, 2016. The adoption of this standard is not expected to have a material impact on the Company's consolidated financial statements and related disclosures.

In November 2015, FASB, issued guidance that simplifies the presentation of deferred tax assets and liabilities in a classified balance sheet. This guidance eliminates the current requirement to present deferred tax liabilities and assets as current and non-current in a classified balance sheet. Instead, all deferred tax assets and liabilities will be required to be classified as non-current. The Company early adopted this guidance prospectively for the year ended December 31, 2015.

In January 2016, the FASB issued guidance that requires equity investments (except those accounted for under the equity method of accounting or those that result in consolidation of the investee) to be measured at fair value with changes in fair value recognized in net income. However, an entity may choose to measure equity investments that do not have readily determinable fair values at cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for the identical or a similar investment of the same issuer. The guidance simplifies the impairment assessment of equity investments without readily determinable fair values by requiring a qualitative assessment to identify impairment. When a qualitative assessment indicates that impairment exists, an entity is required to measure the investment at fair value. The guidance eliminates the requirement for public business entities to disclose the method(s) and significant assumptions used to estimate the fair value that is required to be disclosed for financial instruments measured at amortized cost on the balance sheet, and requires public business entities to use the exit price notion when measuring the fair value of financial instruments for disclosure purposes. The guidance also requires an entity to present separately in other comprehensive income the portion of the total change in the fair value of a liability resulting from a change in the instrument-specific credit risk when the entity has elected to measure the liability at fair value in accordance with the fair value option for financial instruments. Separate presentation of financial assets and financial liabilities by measurement category and form of financial asset (that is, securities or loans and receivables) on the balance sheet or the accompanying notes to the financial statements is required under this guidance. The guidance further clarifies that an entity should evaluate the need for a valuation allowance on a deferred tax asset related to available-for-sale securities in combination with the entity's other deferred tax assets. The guidance is applied by means of a cumulative-effect adjustment to the balance

sheet as of the beginning of the fiscal year of adoption and is effective for the Company in its first quarter of fiscal 2018. Early adoption is permitted only if certain criteria is met. The Company is currently evaluating the impact of this new guidance on its consolidated financial statements and related disclosures.

In February 2016, the FASB issued guidance that requires companies that lease assets (lessees) to recognize on the balance sheet the assets and liabilities for the rights and obligations created by the leases with lease terms of more than 12 months. This guidance is effective for the Company beginning January 1, 2019. Early adoption is permitted. The Company is currently evaluating the impact of this new guidance on its consolidated financial statements and related disclosures.

2. Acquisition

On October 3, 2014, the Company completed the acquisition of Cortina Systems, Inc. including its high-speed interconnect and optical transport product lines for approximately $52,509 in cash and approximately 5.3 million shares. The Company did not acquire as part of the merger, Cortina Systems, Inc.'s access and digital Home business, which Cortina Systems, Inc. divested prior to the closing of the acquisition. The Company acquired Cortina to expand the Company's market share of the high-speed optical and networking interconnects. Cash of $16,500 was placed in an escrow fund for up to 12 months following the closing for the satisfaction of certain potential indemnification claims. The escrow fund was released in October 2015. The consolidated financial statements include the results of operations of Cortina as of the acquisition date.

The fair value of consideration transferred is shown in the table below:

Cash	$	52,509
Common stock		77,958
	$	130,467

The acquisition has been accounted for using the purchase method of accounting which requires, among other things, that assets acquired and liabilities assumed be recognized at their fair values as of the acquisition date.

The following table summarizes the purchase price allocation as of the acquisition date:

Cash	$	17,201
Receivables		15,155
Inventories		30,002
Other current assets		1,685
Property and equipment		4,751
Identifiable intangible assets		80,660
In-process research and development		1,750
Other noncurrent assets		366
Accounts payable, accrued expenses and other current liabilities		(22,545)
Deferred tax liabilities, noncurrent		(725)
Other liabilities		(1,112)
Total identifiable net assets		127,188
Goodwill		3,279
Net assets acquired	$	130,467

As of the acquisition date, the fair value of receivables, other assets, accounts payable and accrued expenses approximated the book value acquired.

The following table summarizes the estimated fair value of intangible assets and their estimated useful lives as of the date of acquisition:

	Estimated Fair Value	Estimated Useful Life (Years)
Developed technology	$ 71,570	5 - 8
Customer relationships	8,170	10
Trade name	920	5
In-process research and development	1,750	—
	$ 82,410	

Developed technology was valued using the multi-period excess earnings method under the income approach. This method involves discounting the direct cash flow expected to be generated by the technologies over their remaining lives, net of returns on contributory assets. The estimated useful life was determined based on the technology cycle related to each product family and its expected contribution to forecast revenue. Customer relationships were valued using the incremental cash flow approach which involved discounting management's estimate of the incremental revenues afforded by having the existing customer relationships in place as of the acquisition date, net of operating expense, taxes and returns on contributory assets. The estimated useful life was determined based on the estimated customer product or program ramp-up period required to develop the similar existing customer revenue base. Trade name was valued based on application of relief-from-royalty approach under the income approach. This method is based on the application of a royalty rate to forecasted revenue. The estimated useful life was determined based on the expected life of the trade names, the history of the trade names and the cash flows anticipated over the forecasted periods. In-process research and development was valued using the multi-period excess earnings method under the income approach, with the additional inclusion of estimated costs required to complete the projects.

The Company capitalized $1,750 of IPR&D costs related to the Cortina acquisition. In the year ended December 31, 2015, the Company abandoned the project related to in-process research and development and recorded an impairment charge of $1,750 included in the research and development expenses in the consolidated statements of income.

Goodwill is calculated as the excess of the consideration transferred over the net assets recognized and is attributable to the workforce of Cortina. Goodwill is not amortized and is not deductible for tax purposes. During the year ended December 31, 2015, the Company recorded a measurement period adjustment of $251. The adjustment has been recorded retrospectively to reflect measurement period adjustments to the provisional acquisition accounting values as of the acquisition date. The changes in provisional values resulted in a retrospective decrease of $251 in goodwill and income tax payable.

The Company incurred acquisition costs of $1,091 which are included in general and administrative expense in the consolidated statement of income for the year ended December 31, 2014.

Cortina contributed revenue of $21,018 and pre-tax loss of $10,018 to the Company for the period from October 3, 2014 to December 31, 2014.

Pro Forma Information

The following unaudited pro forma financial information presents a summary of the Company's consolidated results of operations for the year ended December 31, 2014 and the year ended December 31, 2013, assuming the Cortina acquisition had been completed as of January 1, 2013. The pro forma information includes adjustments to amortization and depreciation for intangible assets and property and equipment acquired, amortization of the purchase accounting effect on inventory acquired from Cortina, and interest income for reduction in short-term investments to fund the acquisition.

	Pro Forma Year Ended December 31, 2014 (unaudited)	Pro Forma Year Ended December 31, 2013 (unaudited)
Revenue	$ 224,116	$ 191,966
Net loss	$ (8,500)	$ (28,427)
Earnings per share – basic	$ (0.23)	$ (0.82)
Earnings per share – diluted	$ (0.23)	$ (0.82)

The unaudited pro forma consolidated results were prepared using the acquisition method of accounting and are based on the historical financial information of the Company and Cortina, reflecting the results of operations for the year ended December 31, 2014 and 2013. The unaudited pro forma consolidated results are not necessarily indicative of what the Company's consolidated results of operations actually would have been had the Company completed the acquisition as of the beginning of the period presented. In addition, the unaudited pro forma consolidated results do not purport to project the future results of operations of the combined company nor do they reflect the expected realization of any cost savings associated with the acquisition.

3. Investments

The following table summarizes the investments by investment category:

	December 31, 2015			
	Cost	Gross Unrealized Gain	Gross Unrealized Loss	Fair Value
Available-for-sale securities:				
US treasury securities	$ 2,998	$ —	$ (5)	$ 2,993
Municipal bonds	20,042	13	(19)	20,036
Corporate notes/bonds	14,700	1	(44)	14,657
Government agency bonds	4,011	—	(4)	4,007
Asset backed securities	1,926	—	(3)	1,923
Total investments	$ 43,677	$ 14	$ (75)	$ 43,616

	December 31, 2014			
	Cost	Gross Unrealized Gain	Gross Unrealized Loss	Fair Value
Available-for-sale securities:				
US treasury securities	$ 2,056	$ 1	$ —	$ 2,057
Municipal bonds	19,686	43	(17)	19,712
Corporate notes/bonds	16,381	32	(21)	16,392
Asset backed securities	750	—	(3)	747
Total investments	$ 38,873	$ 76	$ (41)	$ 38,908

As of December 31, 2015, the Company had 41 investments that were in an unrealized loss position. The gross unrealized losses on these investments at December 31, 2015 were primarily due to changes in interest rates and determined to be temporary in nature. The Company reviews the investments to identify and evaluate investments that have an indication of possible other-than-temporary impairment. Factors considered in determining whether a loss is other-than-temporary include the length of time and extent to which fair value has been less than the cost basis, the financial condition and near-term prospects of the investee, and the intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery in market value.

The realized gain related to the Company's available-for-sale investment, which was reclassified from other comprehensive income, was included in other income in the consolidated statements of income.

The contractual maturities of available-for-sale securities at December 31, 2015 are presented in the following table:

	Cost	Fair Value
Due in one year or less	$ 24,637	$ 24,631
Due between one and five years	19,040	18,985
	$ 43,677	$ 43,616

In 2015 and 2014, the Company used cash to purchase a minority interests in early stage private companies for $2,000 and $5,000, respectively. The Company's ownership in these entities are less than 10% and the Company does not have the ability to exercise significant influence over operating and financial policies of the entities, therefore, the investments are accounted for under the cost method and included in other assets in the Company's consolidated balance sheets. As of December 31, 2015 and 2014, the total cost method investments was $9,621 and $7,621, respectively. No impairments were recorded for these cost method investments for the years ended December 31, 2015 and 2014.

4. Concentrations

Financial instruments that subject the Company to concentrations of credit risk consist primarily of cash, cash equivalents and trade accounts receivable. The Company extends differing levels of credit to customers and does not require collateral deposits. As of December 31, 2015 and 2014, the Company has allowance for doubtful accounts of $165. As of December 31, 2015 and 2014, the Company has allowance for distributors' price discount of $2,241 and $2,206, respectively.

The following table summarizes the significant customers' and distributors' accounts receivable and revenue as a percentage of total accounts receivable and total revenue, respectively:

	December 31,	
Accounts Receivable	**2015**	**2014**
Customer A	*	*
Customer B	*	*
Customer C	13%	18%

	Year Ended December 31,		
Revenue	**2015**	**2014**	**2013**
Customer A	*	13%	12%
Customer B	*	*	15
Customer C	*	*	*

* Less than 10% of total receivable or total revenue

Certain other customers are distributors that sell the Company's products exclusively to what would be a "Customer D" above if the Company was able to include the sales made to those distributors. In the aggregate, revenue to such end customer, including revenue made through distributors as a percentage of total revenue was 11% for the year ended December 31, 2013. Certain other customers are subcontractors of customers A and B above. In the aggregate, revenue to Customer A, including its subcontractors as a percentage of total revenue was 18% and 20% for the years ended December 31, 2014 and 2013, respectively. In the aggregate, revenue to Customer B, including its subcontractor as a percentage of total revenue was 16% for the year ended December 31, 2013, respectively. In addition, the Company sells direct and indirectly through subcontractors to what would be a "Customer E" above. The Company believes in the aggregate, revenue to Customer E, including its subcontractors as a percentage of total revenue was approximately 13% for the year ended December 31, 2015.

5. Inventories

Inventories consist of the following:

	December 31, 2015	December 31, 2014
Raw materials	$ 4,291	$ 5,803
Work in process	2,620	2,409
Finished goods	10,917	18,438
	$ 17,828	$ 26,650

Finished goods include amounts held by distributors of $2,153 and $2,798 as of December 31, 2015 and 2014, respectively.

6. Property and Equipment, net

Property and equipment consist of the following:

	December 31, 2015	December 31, 2014
Laboratory and production equipment	$ 59,220	$ 48,522
Office, software and computer equipment	18,562	15,855
Furniture and fixtures	1,264	1,762
Leasehold improvements	5,866	5,212
	84,912	71,351
Less accumulated depreciation	(48,632)	(35,853)
	$ 36,280	$ 35,498

Depreciation and amortization expense for the years ended December 31, 2015, 2014 and 2013 was $14,150, $10,897 and $7,508, respectively.

As of December 31, 2015 and 2014, computer software costs included in property and equipment were $5,929 and $4,582, respectively. Amortization expense of capitalized computer software costs was $1,011, $614 and $283 for the years ended December 31, 2015, 2014 and 2013, respectively.

Property and equipment not paid as of December 31, 2015 and 2014 were $1,949 and $1,540, respectively.

7. Goodwill and Identifiable Intangible Assets

The following table presents details of identifiable intangible assets:

	December 31, 2015			December 31, 2014		
	Gross	Accumulated Amortization	Net	Gross	Accumulated Amortization	Net
Developed technology	$ 71,570	$ 14,356	$ 57,214	$ 71,570	$ 2,857	$ 68,713
Customer relationships	8,170	1,018	7,152	8,170	201	7,969
Trade name	920	230	690	920	46	874
Patents	1,579	346	1,233	1,579	112	1,467
In-process research and development	—	—	—	1,750	—	1,750
	$ 82,239	$ 15,950	$ 66,289	$ 83,989	$ 3,216	$ 80,773

The following table presents amortization of intangible assets for the years ended December 31, 2015:

	Year Ended December 31,	
	2015	2014
Cost of goods sold	$ 11,499	$ 2,857
Sales and marketing	817	201
General and administrative	418	158
	$ 12,734	$ 3,216

In the year ended December 31, 2015, the Company abandoned the project related to in-process research and development and recorded an impairment charge of $1,750 included in the research and development expenses in the consolidated statements of income.

Based on the amount of intangible assets subject to amortization at December 31, 2015, the expected amortization expense for each of the next five fiscal years and thereafter is as follows:

2016	$ 12,707
2017	12,682
2018	12,648
2019	11,078
2020	6,394
Thereafter	10,780
	$ 66,289

The weighted-average amortization periods remaining by intangible asset category were as follows (in years):

Developed technology	5.33
Customer relationship	8.75
Others	9.97

During the year ended December 31, 2014, goodwill increased initially by $3,530 as a result of Cortina acquisition. As discussed in note 2 above, in the year ended December 31, 2015, the Company recorded a measurement period adjustment of $251. This resulted in a retrospective decrease of $251 in goodwill and income tax payable. No other changes were recorded in goodwill in the year ended December 31, 2015.

8. Convertible Debt

In December 2015, the Company issued $230,000 of 1.125% convertible senior notes due 2020(Convertible Notes). The Convertible Notes will mature December 1, 2020, unless earlier converted or repurchased. Interest on the Convertible Notes is payable on June 1 and December 1 of each year, beginning on June 1, 2016. The initial conversion rate is 24.8988 shares of common stock per $1 principal amount of Convertible Notes, which represents an initial conversion price of approximately $40.16 per share. The Convertible Notes will be subject to repurchase at the option of the holders following certain fundamental corporate changes, at a fundamental change repurchase price equal to 100% of the principal amount of the notes to be repurchased, plus accrued and unpaid interest to, but excluding, the fundamental change repurchase date. The conversion rate will be subject to adjustment in some events but will not be adjusted for any accrued and unpaid interest. Certain corporate events that occur prior to the stated maturity date can cause the Company to increase the conversion rate for a holder.

Prior to the close of business on the business day immediately preceding June 1, 2020, holders may convert all or any portion of their Convertible Notes only under the following circumstances: (i) during any calendar quarter commencing after the calendar quarter ending on March 31, 2016 (and only during such calendar quarter), if the last reported sale price of the Company's common stock for at least 20 trading days (whether or not consecutive) during the period of 30 consecutive trading days ending on the last trading day of the immediately preceding calendar quarter is greater than or equal to 130% of the conversion price on each applicable trading day; (ii) during the five business day period after any five consecutive trading day period (the "measurement period") in which the "trading price" per $1 principal amount of notes, as determined following a request by a holder of notes in accordance with procedures specified in the indenture governing the Convertible Notes, for each trading day of the measurement period was less than 98% of the product of the last reported sale price of the common stock and the conversion rate on each such trading day.; or (iii) upon the occurrence of specified corporate events. On or after June 1, 2020, until the close of business on the second scheduled trading day immediately preceding the maturity date, holders may convert their notes at any time, regardless of the foregoing circumstances. Upon conversion, the Company will pay or deliver, as the case may be, cash, shares of common stock or a combination of cash and shares of common stock, at the Company's election. The Company's current intent is to settle the principal amount of the Convertible Notes in cash upon conversion. If the conversion value exceeds the principal amount, the Company would deliver shares of its common stock in respect to the remainder of its conversion obligation in excess of the aggregate principal amount (conversion spread).

The Convertible Notes are not redeemable at the Company's option prior to maturity.

The Convertible Note are governed by the terms of indenture (Indenture). The Indenture do not contain any financial or operating covenants, or restrictions on the payments of dividends, the incurrence of indebtedness or the issuance or repurchase of securities by the Company or any of its subsidiaries. The Indenture contains customary terms and covenants in events of default. If an event of default (other than certain events of bankruptcy, insolvency or reorganization involving the Company) occurs and is continuing, the Trustee by notice to the Company, or the holders of at least 25% in principal amount of the outstanding Convertible Notes by notice to the Company and the Trustee, may, and the Trustee at the request of such holders shall, declare 100% of the principal of and accrued and unpaid interest, if any, on all the Convertible Notes to be due and payable. Upon the occurrence of certain events of bankruptcy, insolvency or reorganization involving the Company, 100% of the principal of and accrued and unpaid interest, if any, on all of the Convertible Notes will become due and payable automatically. Upon such a declaration of acceleration, such principal and accrued and unpaid interest, if any, will be due and payable immediately. Notwithstanding the foregoing, the Indenture provides that, to the extent the Company elects, the sole remedy for an event of default relating to certain failures by the Company to comply with certain reporting covenants in the Indenture consists exclusively of the right to receive additional interest on the Convertible Notes. As of December 31, 2015, none of the conditions allowing holders of the Notes to convert had been met.

In accounting for the issuance of the Convertible Notes, the Company separated the Convertible Notes into liability and equity components. The carrying amount of the liability component was calculated by measuring the estimated fair value of a similar liability that does not have an associated convertible feature. The carrying amount of the equity component representing the conversion option was determined by deducting the fair value of the liability component from the face value of the Convertible Notes as a whole. The excess of the face amount of the liability component over its carrying amount is amortized to interest expense over the term of the Convertible Notes using the effective interest method. The gross proceeds of $230,000 were accordingly allocated between long-term debt for $175,974 and stockholders' equity for $54,026. Issuance costs of $6,359, of which $6,007 were paid as of December 31, 2015, were allocated between long-term debt ($4,864) and equity ($1,495). The total interest expense recognized for the year ended December 31, 2015 was $783, which consists of $192 of contractual interest expense, $543 of amortization of debt discount and $48 of amortization of debt issuance costs. The issuance costs allocated to long-term debt is presented in the balance sheet as offset against long-term debt as of December 31, 2015.

In connection with the issuance of the Convertible Notes, the Company entered into capped call transactions (Capped Call) in private transactions. Under the Capped Call, the Company purchased capped call options that in aggregate relate to 100% of the total number of shares of the Company's common stock underlying the Convertible Notes, with a strike price equal to the conversion price of the Convertible Notes and with a cap price equal to $52.06 per share. The capped calls were purchased for $17,802 and recorded as a reduction to additional paid-in-capital in accordance with ASC 815-40, Contracts in Entity's Own Equity.

The purchased Capped Call allows the Company to receive shares of its common stock and/or cash from counterparties equal to the amounts of common stock and/or cash related to the excess of the market price per share of the common stock, as measured under the terms of the Capped Call over the strike price of the Capped Call during the relevant valuation period. The purchased Capped Call is intended to reduce the potential dilution to common stock upon future conversion of the Convertible Notes by effectively increasing the initial conversion price to $52.06 as well as to offset potential cash payments the Company is required to make in excess of the principal amount of the Convertible Notes in applicable events.

The Capped Call is a separate transaction entered into by the Company with the option counterparties, are not part of the terms of the Convertible Notes and will not change the holders' rights under the Convertible Notes.

9. Other Long-term Liabilities

Other long-term liabilities consist of the following:

	December 31,	
	2015	2014
Deferred rent	$ 1,728	$ 1,930
Income tax payable	6,969	4,687
Deferred tax liabilities	—	792
	$ 8,697	$ 7,409

10. Income Taxes

Loss before income taxes consists of the following:

	Year Ended December 31,		
	2015	2014	2013
United States	$ 329	$ (2,684)	$ (2,507)
Foreign	(5,898)	(18,186)	(8,919)
Total	$ (5,569)	$ (20,870)	$ (11,426)

Income tax provision consisted of the following:

	Year Ended December 31,		
	2015	2014	2013
Current:			
U.S. Federal	$ 7,304	$ 350	$ 1,816
U.S. State	218	55	1
Foreign	603	846	98
	8,125	1,251	1,915
Deferred:			
U.S. Federal	(114)	895	(135)
U.S. State	(15)	—	—
Foreign	(14)	(408)	(28)
	(143)	487	(163)
Total	$ 7,982	$ 1,738	$ 1,752

Income tax provision differed from the amounts computed by applying the U.S. federal income tax rate of 34% in 2015, 2014 and 2013 to loss before income taxes as a result of the following:

	Year Ended December 31,		
	2015	**2014**	**2013**
Benefit at statutory rate	$ (1,893)	$ (7,096)	$ (3,886)
State income taxes	50	1,651	303
Research and development credits	(10,213)	(7,384)	(5,850)
Change in valuation allowance	13,669	5,271	6,781
Foreign earnings, taxed at different rates	3,175	6,381	2,888
Unrecognized tax benefits	3,829	1,713	1,708
Stock-based compensation	150	166	142
Tax exempt income	(60)	(83)	(157)
Prior year return to provision adjustment	(412)	292	(257)
Cortina acquisition transaction cost	—	444	—
Withholding tax	(350)	350	—
Other	37	33	80
	$ 7,982	$ 1,738	$ 1,752

Significant components of the Company's net deferred taxes consist of the following:

	December 31,	
	2015	**2014**
Deferred tax assets		
Net operating loss carry forwards	$ 8,940	$ 8,314
Research and development credits	36,619	30,637
Stock-based compensation	8,214	6,966
Accrued expenses and allowances	2,724	2,117
Amortization and depreciation	765	1,052
Other temporary differences	3,424	3,461
Valuation allowance	(33,567)	(39,682)
Total deferred tax assets	27,119	12,865
Deferred tax liabilities		
Subpart F income on foreign subsidiaries earnings	(3,578)	(5,981)
Acquired intangible assets	(5,186)	(6,157)
Convertible debt	(18,136)	—
Other deferred tax liabilities	(169)	(820)
Total deferred tax liabilities	(27,069)	(12,958)
Deferred tax assets (liabilities), net	$ 50	$ (93)

At December 31, 2015 and 2014, the Company has recorded a deferred tax charge of $2,323 and $3,261, respectively, which represents the tax on the intercompany transfer of intangible assets in connection with the Company's international reorganization during 2010. The deferred tax charge is being amortized over the estimated useful life of 8 years to income tax expense.

Valuation Allowance

The Company records a valuation allowance to reduce deferred tax assets to the amount that the Company believes is more likely than not to be realized. The determination of recording or releasing tax valuation allowances is made, in part, pursuant to an assessment performed by management regarding the likelihood that the Company will generate sufficient future taxable income against which benefits of the deferred tax assets may or may not be realized. This assessment requires management to exercise significant judgment and make estimates with respect to the Company's ability to generate revenue, gross profits, operating income and taxable income in future periods. Amongst other factors, management must make assumptions regarding overall current and projected business and semiconductor industry conditions, operating efficiencies, the Company's ability to timely develop, introduce and consistently manufacture new products to customers' specifications, acceptance of new products, customer concentrations, technological change and the competitive environment which may impact the Company's ability to generate taxable income and, in turn, realize the value of the deferred tax assets. The Company uses the tax law ordering approach of intraperiod allocation to allocate the benefit of windfall tax benefits based on provisions in the tax law that identify the sequence in which those amounts are utilized for tax purposes. Additionally, when determining whether uncertain tax positions are a source of income for valuation allowance purposes, the Company applies the tax law ordering approach to determine how these liabilities will ultimately be satisfied.

At December 31, 2013, full valuation allowance was recorded on the U.S., Singapore, and Taiwan deferred tax assets. At December 31, 2015 and 2014, the Company has full valuation allowance recorded against the U.S., Singapore, Canada and Taiwan deferred tax assets.

The valuation allowance increased (decreased) ($6,115), $17,234 and $6,768 in the years ended December 31, 2015, 2014 and 2013, respectively.

The net decrease of $6,115 in the valuation allowance for the year ended December 31, 2015 is comprised of $18,383 decrease charged to additional paid-in capital, $2,168 decrease charged to other comprehensive income, offset by $767 increase charged to goodwill, and $13,669 increase charged to income tax provision. The increase of $17,234 in the valuation allowance for the year ended December 31, 2014 is comprised of $1,165 increase charged to goodwill and $16,069 increase charged to income tax provision. The increase of $6,768 in the valuation allowance for the year ended December 31, 2013 was substantially charged to income tax provision.

General Income Tax Disclosures

The Company has net operating loss (“NOL”) carryforwards for federal and state income tax purposes of approximately $69,011 and $17,868, respectively at December 31, 2015, that will begin to expire in 2022 for federal income tax purposes and in 2016 for state income tax purposes. The Company has additional federal and state NOL carryover as of December 31, 2015 of $34,132 and $12,417, respectively, arising from an excess stock option deduction that were not recognized in the financial statements. These excess stock option compensation benefits will be credited to additional paid-in capital when it reduces current taxable income. At December 31, 2015, the Company has NOL carryforwards of $3,177 for its Taiwan subsidiary which begin to expire in 2019, and capital allowance carryover of $33,143 for the Singapore subsidiary, which does not expire. A full valuation allowance has been provided on U.S. NOL, Singapore capital allowance carryforwards and Taiwan NOL.

At December 31, 2015, the Company has federal and state research and development (“R&D”) tax credit carryforwards of $25,836 and $28,783, respectively. The federal tax credits will begin to expire in 2024, unless previously utilized. Some state tax credits will begin to expire in 2022 and some do not expire. A full valuation allowance has been provided on R&D tax credit carryforwards.

Pursuant to Internal Revenue Code sections 382 and 383, use of the Company’s NOL and R&D credits generated prior to June 2004 are subject to an annual limitation due to a cumulative ownership percentage change that occurred in that period. The Company has had two changes in ownership, one in December 2000 and the second in June 2004, that resulted in an annual limitation on NOL and R&D credit utilization. The NOL and R&D credit carryover of Cortina, are also subject to annual limitation under Internal Revenue Code sections 382 and 383. The acquisition of Cortina caused an ownership change that resulted in an annual limitation, as well as Cortina’s legacy annual limitation amount from ownership changes prior to acquisition. The NOL and R&D credit carryforward which will expire unused due to annual limitation is not recognized for financial statement purposes and is not reflected in the above carryover amounts.

The Company’s NOL carryforwards include Cortina’s federal and state pre-acquisition NOL of $49,152 and $14,924, respectively. These NOL carryforwards will begin to expire in 2024 for federal and 2016 for state. The Company’s R&D credit carryforwards included Cortina’s federal and state pre-acquisition credits of $6,033 and $7,977, respectively. The federal R&D credit carryforward will begin to expire in 2027. While some state tax credits will begin to expire in 2022, most do not expire. In addition, Cortina has $2,859 capital loss carryover which expires in 2018. The utilization of Cortina’s pre-acquisition tax attributes is subject to certain annual limitations under Internal Revenue Code sections 382 and 383. No benefit for these tax attributes was recorded upon the close of the acquisition, as the benefit from these tax attributes did not meet the "more-likely-than-not" standard.

The Company operates under tax holiday in Singapore, which is effective through May 2020. The tax holiday is conditional upon meeting certain employment, activities and investment thresholds. As of December 31, 2015, the Company believes it met all the required thresholds. The Singapore tax holiday did not impact the Company’s Singapore taxes for the years 2015, 2014 and 2013, due to losses and valuation allowance.

The following table summarizes the changes in gross unrecognized tax benefits:

	Year Ended December 31,		
	2015	2014	2013
Balance as of January 1	$ 44,081	$ 8,031	$ 6,155
Increases based on tax positions related to the current year	4,459	3,102	1,918
Increase (decreases) based on tax positions of prior year	(1,923)	(61)	(42)
Gross increases for acquired unrecognized tax benefits	—	33,935	—
Statute of limitation expirations	(164)	(926)	—
Balance as of December 31	$ 46,453	$ 44,081	$ 8,031

As of December 31, 2015, the Company had approximately $6,683 of unrecognized tax benefits that if recognized would affect the effective income tax rate. The Company believes that before the end of next year, it is reasonably possible that the gross unrecognized tax benefit may decrease by approximately $1,968 due to resolution of the state audit.

The Company recognizes interest and penalties related to unrecognized tax benefits as a component of income tax expense. The Company recorded $44 and $14 interest in the years ended December 31, 2015 and 2014, respectively, and no interest or penalties in the year ended December 31, 2013. The Company had $163, $151, and $14 of interest and penalties accrued as of December 31, 2015, 2014 and 2013, respectively.

The Company files income tax returns in the U.S. federal jurisdiction, various states and certain foreign jurisdictions. The Company is no longer subject to U.S. federal income tax examinations for tax years ended on or before December 31, 2011 or to California state income tax examinations for tax years ended on or before December 31, 2010. However, to the extent allowed by law, the tax authorities may have the right to examine prior periods where net operating losses or tax credits were generated and carried forward, and make adjustments up to the amount of the net operating loss or credit carryforward.

The Company does not provide for U.S. income taxes on undistributed earnings of its controlled foreign corporations as the Company intends to reinvest these earnings indefinitely outside the United States. At December 31, 2015, certain foreign subsidiaries had cumulative undistributed earnings while others had accumulated deficit. The cumulative undistributed earnings as of December 31, 2015 was $4,061 that, if repatriated, is not expected to result in additional tax liability as these earnings would be absorbed by the NOL and research credit carryover. No U.S. deferred tax asset was recorded for the accumulated deficit as it was not apparent as of December 31, 2015, that such deferred tax asset would reverse in the foreseeable future.

In October 2012, the Company received notification from the California Franchise Tax Board that the 2009 and 2010 California tax returns will be examined. The Company believes it has adequate reserve for its uncertain tax positions, however, there is no assurance that the taxing authorities will not propose adjustments that are different from the Company's expected outcome and such adjustments may impact the provision for income taxes. The California Franchise Tax Board examination is on-going as of report date.

In June 2013, the Singapore subsidiary received notification from the Inland Revenue Authority of Singapore that the 2010 tax return will be reviewed. The review is on-going as of report date.

11. Earnings Per Share

The following shows the computation of basic and diluted earnings per share:

	Year Ended December 31,		
	2015	2014	2013
Numerator			
Net loss	$ (13,551)	$ (22,608)	$ (13,178)
Denominator			
Weighted average common stock	38,580,330	32,707,868	29,495,856
Less weighted average unvested common stock subject to repurchase and unvested restricted stock award	—	—	(2,851)
Weighted average common stock—basic and diluted	38,580,330	32,707,868	29,493,005
Earnings per share			
Basic	$ (0.35)	$ (0.69)	$ (0.45)
Diluted	$ (0.35)	$ (0.69)	$ (0.45)

The following securities were not included in the computation of diluted earnings per share as inclusion would have been anti-dilutive:

	Year Ended December 31,		
	2015	2014	2013
Common stock options	2,563,230	3,350,112	4,373,642
Warrant to purchase redeemable convertible preferred stock	—	—	1,696
Unvested restricted stock award and restricted stock unit	4,672,806	3,705,415	3,030,202
Convertible debt	376,576	—	—
	7,612,612	7,055,527	7,405,540

12. Stock-Based Compensation

In June 2010, the Board of Directors approved the Company's 2010 Stock Incentive Plan (the "2010 Plan"), which became effective in November 2010. The 2010 Plan provides for the grants of restricted stock, stock appreciation rights and stock unit awards to employees, non-employee directors, advisors and consultants. The Board of Directors administers the 2010 Plan, including the determination of the recipient of an award, the number of shares subject to each award, whether an option is to be classified as an incentive stock option or nonstatutory option, and the terms and conditions of each award, including the exercise and purchase prices and the vesting or duration of the award. Options granted under the 2010 Plan are exercisable only upon vesting. At December 31, 2015, 2,014,712 shares of common stock have been reserved for future grants under the 2010 Plan.

Stock Option Awards

The Company did not grant any stock options during the years ended December 31, 2015 and 2014.

The fair value of each option grant is estimated on the date of grant using the Black-Scholes option pricing model with the following weighted average assumptions for the year ended December 31, 2013:

Risk-free interest rate	1.41%
Expected life (in years)	6.25
Dividend yield	—
Expected volatility	50%

The following table summarizes information regarding options outstanding:

	Number of Shares	Weighted Average Exercise Price Per Share	Weighted Average Remaining Contractual Life	Aggregate Intrinsic Value
Outstanding at December 31, 2014	3,005,594	$ 10.16	6.12	$ 25,302
Granted	—	—		
Exercised	(722,913)	8.50		
Canceled	(26,285)	17.37		
Outstanding at December 31, 2015	2,256,396	$ 10.61	5.29	$ 37,036
Exercisable at December 31, 2015	2,177,319	$ 10.58	5.19	$ 34,813
Vested and expected to vest in the future as of December 31, 2015	2,255,573	$ 10.61	5.29	$ 37,022

The intrinsic value of options outstanding, exercisable and vested and expected to vest is calculated based on the difference between the exercise price and the fair value of the Company's common stock as of the respective balance sheet dates.

The weighted average grant date fair value per share of stock options granted to employees during the year ended December 31, 2013 was $4.82.

The total intrinsic value of options exercised during the years ended December 31, 2015, 2014 and 2013 was $10,696, $7,800 and $7,313, respectively. The intrinsic value of exercised options is calculated based on the difference between the exercise price and the fair value of the Company's common stock as of the exercise date. Cash received from the exercise of stock options was $6,145, $4,298 and $2,905, respectively, for the years ended December 31, 2015, 2014 and 2013.

Restricted Stock Units and Awards

The Company granted restricted stock units (RSUs) to members of the Board of Directors and employees. Most of the Company's outstanding restricted stock units vest over four years with vesting contingent upon continuous service. The Company estimates the fair value of restricted stock units using the market price of the common stock on the date of the grant. The fair value of these awards is amortized on a straight-line basis over the vesting period.

The following table summarizes information regarding outstanding restricted stock units:

	Number of Shares	Weighted Average Grant Date Fair Value Per Share
Outstanding at December 31, 2014	4,789,622	$ 12.85
Granted	1,671,104	20.49
Vested	(1,636,193)	13.35
Canceled	(223,664)	14.53
Outstanding at December 31, 2015	4,600,869	$ 15.37
Expected to vest in the future as of December 31, 2015	4,499,822	

The RSUs includes performance-based stock units subject to achievement of pre-established revenue goal and earnings per share on non-GAAP basis. Once the goals are met, the performance-based stock units are subject to four years of vesting from the original grant date, contingent upon continuous service. For the year ended December 31, 2015, the total performance-based units granted was 218,642.

The Company granted restricted stock awards (RSAs) to certain members of the Board of Directors. The Company estimates the fair value of the RSAs using the market price of the common stock on the date of the grant. As of December 31, 2012, the Company had 12,849 unvested RSAs outstanding, of which 9,998 RSAs vested during the year ended December 31, 2013, resulting to 2,851 unvested RSAs outstanding as of December 31, 2013. All remaining unvested RSAs of $2,851 vested during the year ended December 31, 2014.

Employee Stock Purchase Plan

In December 2011, the Company adopted the Employee Stock Purchase Plan ("ESPP"). Participants purchase the Company's stock using payroll deductions, which may not exceed 15% of their total cash compensation. Pursuant to the terms of the ESPP, the "look-back" period for the stock purchase price is six months. Offering and purchase periods will begin on February 10 and August 10 of each year. Participants will be granted the right to purchase common stock at a price per share that is 85% of the lesser of the fair market value of the Company's common shares at the beginning or the end of each six-month period.

The ESPP imposes certain limitations upon an employee's right to acquire common stock, including the following: (i) no employee shall be granted a right to participate if such employee immediately after the election to purchase common stock, would own stock possessing 5% or more to the total combined voting power or value of all classes of stock of the Company, and (ii) no employee may be granted rights to purchase more than $25 fair value of common stock for each calendar year. The maximum aggregate number of shares of common stock available for purchase under the ESPP is 1,750,000. Total common stock issued under the ESPP during the years ended December 31, 2015, 2014 and 2013 was 326,764, 264,886 and 279,074, respectively.

The fair value of employee stock purchase plan is estimated at the start of offering period using the Black-Scholes option pricing model with the following average assumptions for the years ended December 31, 2015, 2014 and 2013:

	Year Ended December 31,		
	2015	2014	2013
Risk-free interest rate	0.14%	0.07%	0.10%
Expected life (in years)	0.50	0.50	0.49
Dividend yield	—	—	—
Expected volatility	42%	40%	45%
Estimated fair value	$ 5.77	3.55	$ 2.86

Stock-Based Compensation Expense

Stock-based compensation expense is included in the Company's results of operations as follows:

	Year Ended December 31,		
	2015	2014	2013
Cost of revenue	$ 1,471	$ 1,260	$ 1,086
Research and development	16,904	12,420	8,586
Sales and marketing	4,445	4,079	3,204
General and administrative	5,473	4,701	4,102
	$ 28,293	$ 22,460	$ 16,978

As of December 31, 2015, total unrecognized compensation cost related to unvested stock options and awards prior to the consideration of expected forfeitures, was approximately $54,353, which is expected to be recognized over a weighted-average period of 2.62 years.

13. Employee Benefit Plan

The Company has established a 401(k) tax-deferred savings plan (the "Plan") which permits participants to make contributions by salary deduction pursuant to Section 401(k) of the Internal Revenue Code of 1986, as amended. The Company may, at its discretion, make matching contributions to the Plan. Furthermore, the Company is responsible for administrative costs of the Plan. The Company accrued $1,131 contribution to the Plan for the year ended December 31, 2015. The Company did not make any contributions to the Plan since its inception to December 31, 2014.

14. Fair Value Measurements

The guidance on fair value measurements requires fair value measurements to be classified and disclosed in one of the following three categories:

Level 1: Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities;

Level 2: Quoted prices in markets that are not active, or inputs which are observable, either directly or indirectly, for substantially the full term of the asset or liability, or

Level 3: Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (i.e., supported by little or no market activity).

The Company measures its investments in marketable securities at fair value using the market approach which uses prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities. The Company has cash equivalents which consist of money market funds valued using the amortized cost method, in accordance with Rule 2a-7 under the 1940 Act which approximates fair value.

The following table presents information about assets and liabilities required to be carried at fair value on a recurring basis:

December 31, 2015	**Total**	**Level 1**	**Level 2**
Assets			
Cash equivalents:			
Money market funds	$ 102,008	$ —	$ 102,008
Investment in marketable securities:			
US treasury securities	2,993	2,993	—
Municipal bonds	20,036	—	20,036
Corporate notes/bonds	14,657	—	14,657
Government agency bonds	4,007	—	4,007
Asset backed securities	1,923	—	1,923
	$ 145,624	$ 2,993	$ 142,631
Liabilities			
Convertible Notes	$ 221,950	$ —	$ 221,950

The convertible notes are carried on the Consolidated Balance Sheets at their original issuance value including accreted interest, net of unamortized debt discount and issuance cost. The Convertible Notes are not marked to fair value at the end of each reporting period. As of December 31, 2015, the fair value of Convertible Notes was determined on the basis of market prices observable for similar instruments and is considered Level 2 in the fair value hierarchy.

December 31, 2014	**Total**	**Level 1**	**Level 2**
Assets			
Cash equivalents:			
Money market funds	$ 1,457	$ —	$ 1,457
Investment in marketable securities:			
US treasury securities	2,057	2,057	—
Municipal bonds	19,712	—	19,712
Corporate notes/bonds	16,392	—	16,392
Asset backed securities	747	—	747
	$ 40,365	$ 2,057	$ 38,308

15. Segment and Geographic Information

The Company operates in one reportable segment. Revenue by region is classified based on the locations to which the product is transported, which may differ from the customer's principal offices.

The following table sets forth the Company's revenue by geographic region:

	Year Ended December 31,		
	2015	**2014**	**2013**
China	$ 82,789	$ 54,312	$ 23,039
United States	41,185	22,918	22,389
Thailand	25,123	7,924	1,143
Korea	9,510	10,123	21,818
Other	88,009	60,865	34,275
	$ 246,616	$ 156,142	$ 102,664

As of December 31, 2015, $7,271 of long-lived tangible assets are located outside the United States of which $5,756 are located in Taiwan. As of December 31, 2014, $6,153 of long-lived tangible assets are located outside the United States of which $3,463 are located in Taiwan.

16. Commitments and Contingencies

Leases

The Company leases its facility under noncancelable lease agreements expiring in various years through 2020. The Company also licenses certain software used in its research and development activities under a term license subscription and maintenance arrangement.

Future minimum lease payments under noncancelable operating leases having initial terms in excess of one year are as follows:

	December 31, 2015
2016	$ 14,660
2017	4,443
2018	2,108
2019	1,618
2020	264
	$ 23,093

For the years ended December 31, 2015, 2014 and 2013, lease operating expense was $11,869, $8,193 and $5,990, respectively.

Noncancelable Purchase Obligations

The Company depends upon third party subcontractors to manufacture wafers. The Company's subcontractor relationships typically allow for the cancellation of outstanding purchase orders, but require payment of all expenses incurred through the date of cancellation. As of December 31, 2015, the total value of open purchase orders for wafers was approximately $5,325.

Legal Proceedings

Netlist, Inc. v. Inphi Corporation, Case No. 09-cv-6900 (C.D. Cal.)

On September 22, 2009, Netlist filed suit in the United States District Court, Central District of California, or the Court, asserting that the Company infringes U.S. Patent No. 7,532,537. Netlist filed an amended complaint on December 22, 2009, further asserting that the Company infringes U.S. Patent Nos. 7,619,912 and 7,636,274, collectively with U.S. Patent No. 7,532,537, the patents-in-suit, and seeking both unspecified monetary damages to be determined and an injunction to prevent further infringement. These infringement claims allege that the iMB™ and certain other memory module components infringe the patents-in-suit. The Company answered the amended complaint on February 11, 2010 and asserted that the Company does not infringe the patents-in-suit and that the patents-in-suit are invalid. In 2010, the Company filed *inter partes* requests for reexamination with the United States Patent and Trademark Office (the "USPTO"), asserting that the patents-in-suit are invalid. As a result of the proceedings at the USPTO, the Court has stayed the litigation, with the parties advising the Court on status every 120 days.

As to the proceeding at the USPTO, reexamination has been ordered for all of the patents that were alleged to infringe, and at present, the USPTO has determined that none of the originally filed claims are valid, with certain amended claims being determined patentable. It is expected that a Reexamination Certificate will issue for U.S. Patent No. 7,532,537 based upon amended claims, and the parties continue to assert their respective positions with respect to the reexamination proceedings for U.S. Patent Nos. 7,619,912 and 7,636,274.

While the Company intends to defend the foregoing USPTO proceedings and lawsuit vigorously, the USPTO proceedings and litigation, whether or not determined in the Company's favor or settled, could be costly and time-consuming and could divert management's attention and resources, which could adversely affect the Company's business.

Based on the nature of USPTO proceedings and litigation, the Company is currently unable to predict the final outcome of this lawsuit and therefore, cannot determine the likelihood of loss nor estimate a range of possible loss. However, because of the nature and inherent uncertainties of litigation, should the outcome of these actions be unfavorable, the Company's business, financial condition, results of operations or cash flows could be materially and adversely affected.

In March 2015, the Company settled a patent dispute involving Cortina and Vitesse Semiconductor Corporation (Vitesse). The patent dispute involved a certain patent family owned by Vitesse associated with error correction. The Company paid Vitesse $750 to resolve the dispute. Based on the Agreement and Plan of Merger dated July 30, 2014, as amended by Amendment No. 1 to the Agreement and Plan of Merger dated September 25, 2014, the Company was indemnified for this settlement arising from this claim, up to an amount of $750.

Indemnifications

In the ordinary course of business, the Company may provide indemnifications of varying scope and terms to customers, vendors, lessors, investors, directors, officers, employees and other parties with respect to certain matters, including, but not limited to, losses arising out of the Company's breach of such agreements, services to be provided by the Company, or from intellectual property infringement claims made by third-parties. These indemnifications may survive termination of the underlying agreement and the maximum potential amount of future payments the Company could be required to make under these indemnification provisions may not be subject to maximum loss clauses. The Company has not incurred material costs to defend lawsuits or settle claims related to these indemnifications. Accordingly, the Company has no liabilities recorded for these agreements as of December 31, 2015 and December 31, 2014.

Supplementary Financial Information (Unaudited)

Quarterly Results of Operations

	Year Ended December 31, 2015			
	Mar. 31, 2015	Jun. 30, 2015	Sept. 30, 2015	Dec. 31, 2015

(1) On October 3, 2014, we completed the acquisition of Cortina, including its high-speed interconnect and optical transport product lines. The results of operations of Cortina and estimated fair value of assets acquired and liabilities assumed were included in our financial statements from the acquisition date. This acquisition resulted in a significant change in our statement of operations in 2014 which includes increase cost of goods sold resulting from the step-up inventory acquired from Cortina and amortization of acquired intangibles.

ITEM 9 — *CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE*

None.

ITEM 9A— *CONTROLS AND PROCEDURES*

(a) *Evaluation of disclosure controls and procedures*. We maintain "disclosure controls and procedures," as such term is defined in Rules 13a-15 (e) and 15d – 15(e) under the Securities Exchange Act 1934, or the Exchange Act (as amended), that are designed to provide reasonable assurance that information required to be disclosed by us in reports we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms and that such information is accumulated and communicated to our management, including our Chief Executive Officer (principal executive officer) and Chief Financial Officer (principal financial officer), as appropriate, to allow for timely decisions regarding required disclosure. In designing and evaluating the disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the objectives of the disclosure controls and procedures are met. Our disclosure controls and procedures have been designed to provide reasonable, not absolute assurance. Additionally, in designing disclosure controls and procedures, our management necessarily was required to apply its judgment in evaluating the cost-benefit relationship of possible disclosure controls and procedures. The design of any disclosure controls and procedures also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions.

Based on their evaluation as of the end of the period covered by this Annual Report on Form 10-K, our Chief Executive Officer and Chief Financial Officer have concluded that, as of such date, our disclosure controls and procedures were effective at the reasonable assurance level.

(b) *Management's Annual Report on Internal Control over Financial Reporting.* Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f). Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with policies or procedures may deteriorate. Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, assessed the effectiveness of our internal control over financial reporting as of December 31, 2015. In making this assessment, our management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission, or COSO, in *Internal Control — Integrated Framework (2013)*. Based on the assessment using those criteria, our management concluded that as of December 31, 2015, our internal control over financial reporting was effective. The effectiveness of our internal control over financial reporting as of December 31, 2015 has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which is included in Part II "Item 8, Financial Statements and Supplementary Data".

(c) *Changes in Internal Control over Financial Reporting*. There has been no change in our "internal control over financial reporting" as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act, during our most recent fiscal quarter that materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

ITEM 9B — *OTHER INFORMATION*

None.

PART III

ITEM 10 — *DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE*

The information required by this item is incorporated by reference from the information under the captions "Election of Directors," "Section 16(a) Beneficial Ownership Reporting Compliance" and "Corporate Governance" contained in our Proxy Statement to be filed with the Securities and Exchange Commission in connection with the solicitation of proxies for our 2016 Annual Meeting of Stockholders to be held on May 26, 2016, or Proxy Statement.

ITEM 11 — *EXECUTIVE COMPENSATION*

The information required by this item is incorporated by reference from the information under the captions "Election of Director," "Compensation of Directors," "Compensation Discussion and Analysis," "Corporate Governance," "Compensation Committee Report" and "Executive Compensation" contained in the Proxy Statement.

ITEM 12 — *SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS*

The information required by this item is incorporated by reference from the information under the captions “Security Ownership of Certain Beneficial Owners and Management” and “Executive Compensation” contained in the Proxy Statement.

ITEM 13 — *CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE*

The information required by this item is incorporated by reference from the information under the captions “Election of Directors,” “Corporate Governance” and “Certain Relationships and Related Person Transactions” contained in the Proxy Statement.

ITEM 14 — *PRINCIPAL ACCOUNTANT FEES AND SERVICES*

The information required by this item is incorporated by reference from the information under the captions “Audit Committee Report” and “Ratification of the Appointment of Independent Registered Public Accounting Firm — Principal Accountant Fees and Services” contained in the Proxy Statement.

PART IV

ITEM 15 — *EXHIBITS AND FINANCIAL STATEMENT SCHEDULES*

1. Financial Statements. See “Index to Consolidated Financial Statements” under Part II, “Item 8, Financial Statements and Supplementary Data”.

(a) *Documents filed as part of this report:*

(1) Financial Statements

Reference is made to the Index to Consolidated Financial Statements of Inphi Corporation under Part II, “Item 8, Financial Statements and Supplementary Data”.

(2) Financial Statement Schedules

All financial statement schedules have been omitted because they are not applicable or not required or because the information is included elsewhere in the Consolidated Financial Statements or the Notes thereto.

(3) Exhibits

See Item 15(b) below. Each management contract or compensatory plan or arrangement required to be filed has been identified.

(b) *Exhibits*

The exhibits listed in the Exhibit Index below are filed or incorporated by reference as part of this report.

(c) *Financial Statements and Schedules*

Reference is made to Item 15(a)(2) above.

SIGNATURES

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

INPHI CORPORATION

Forward-Looking Statements

This Annual Report to Stockholders contains forward-looking statements that involve risks and uncertainties. These forward-looking statements include, but are not limited to, statements regarding our strategy, the anticipated benefits and features of our products, use of our products, market acceptance and market share of our products, industry and market trends and investments in technology. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results, performance or achievements to differ materially from those expressed or implied by such forward-looking statements, and reported results should not be considered as an indication of future performance. More information regarding such risks and uncertainties is contained in our Form 10-K attached hereto, and in other reports filed by us with the SEC from time-to-time. You are cautioned not to unduly rely on these forward-looking statements, which speak only as of the date of this Annual Report. Inphi Corporation undertakes no obligation to publicly revise any forward-looking statement to reflect circumstances or event after the date of this Annual Report or to report the occurrence of unanticipated events.
