

About the Cover

We put innovation to work when we constructed our first wind farm—built in 1999 in Kewaunee County, Wis. At the time, it was the largest wind project east of the Mississippi.

Nathanial and Olivia Theys are now growing up everyday with this wind technology in their backyard. As the next generation of energy consumers, they will benefit from a cleaner environment and a responsible energy future.

Building on this vision and initiative, MGE Energy recently completed its second major wind farm in lowa. Our \$58 million, 30-megawatt wind farm began operation in early 2008.

As you read this report, you'll learn how we constantly build on our experience and knowledge to manage our company. We put innovation to work for our customers and loyal investors.

MGE Energy, Inc.

MGE Energy is an investor-owned public utility holding company headquartered in the state capital of Madison, Wis. MGE Energy is the parent company of Madison Gas and Electric Co. The utility provides natural gas and electric service in south-central and western Wisconsin. Assets total \$1.1 billion. In 2007, revenue was more than \$537 million. See the Corporate Profile on page 21.

MGE Energy (MGEE)

Year at a Glance

(Thousands, except per-share amounts)

(2007	2006	Increase/ (Decrease)	% Change
Operating Revenues	\$ 537,594	\$ 507,546	\$ 30,048	5.9
Net Income	\$ 48,825	\$ 42,423	\$ 6,402	15.1
Basic and Diluted Earnings Per Share	\$ 2.27	\$ 2.06	\$ 0.21	10.2
Dividends Declared Per Share	\$ 1.41	\$ 1.39	\$ 0.02	1.4
Dividend Payout Ratio	62.1%	67.5%	(5.4)	(8.0)
Average Shares Outstanding	21,520	20,564	956	4.6
Shares Outstanding at Year End	21,950	20,975	975	4.6
Return on Average Common Equity	12.1%	12.0%	0.12	1.0
Book Value Per Share	\$ 19.88	\$ 18.25	\$ 1.63	8.9
Market Price Per Share (Dec. 31)	\$ 35.47	\$ 36.58	\$ (1.11)	(3.0)
Total Market Value (Dec. 31)	\$ 778,567	\$ 767,266	\$ 11,301	1.5
Total Assets	\$ 1,111,587	\$ 982,232	\$ 129,355	13.2
Total Electric Sales (kWh)	3,431,509	3,347,701	83,808	2.5
Total Gas Deliveries (therms)	215,193	202,994	12,199	6.0

For detailed financial information, see the 2007 MGE Energy Form 10-K.

to our shareholders

Gary J. Wolter, MGE Energy Chairman, President and Chief Executive Officer, with the city of Madison, Wisconsin's state capital, in the background.

or generations, we have put innovation to work at MGE Energy. It is embedded in our culture. For us, innovation is not just a new product or technology. Instead, innovation is fundamental to how we conduct and build our business. It is an integral part of our process. At MGE Energy, we encourage our employees to generate ideas and take initiative—to imagine how things can be better.

Because of our innovative approach, MGE Energy stands out year after year as an industry leader—in financial performance, in serving customers and in environmental stewardship. We create the solutions that address the challenges we face.

Financial performance

Innovation turns creativity into success. Innovation drives business growth, increases the bottom line and produces results for our shareholders.

MGE Energy reached a milestone when its assets topped \$1 billion in 2007. In the last five years, assets have grown from \$726 million to \$1.1 billion

This steady growth in assets helped produce record earnings of \$2.27 per share in 2007. Sales growth in electric deliveries to the residential and commercial sectors also contributed to these earnings. Your company has produced record earnings for four of the last five years.

In 2007, your Board of Directors raised the regular quarterly dividend to \$0.355 per share on the company's common stock. The amount of the dividend increase was double 2006's change and the largest increase in 15 years. Cash dividends paid in 2007 totaled \$1.41 per share. MGE Energy is one of only 95 U.S. companies and one of six electric utilities to raise dividends annually for 30 or more consecutive years.

Independent rating agencies have taken note of our performance. Madison Gas and Electric Co. (MGE), our main subsidiary, maintained the highest bond rating (AA-) of all investor-owned, combination utilities in the nation from Standard & Poor's. Likewise, Moody's Investor Service gives MGE the high mark of Aa2 for its sound business strategy and supportive regulatory environment. MGE Energy's financial performance earned one of Value Line's top ratings for financial strength and its highest ranking for a safe investment.

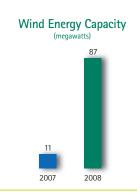

Energy future

Technology is shaping the future of our industry. We are investing in new projects that provide reliable energy and environmental stewardship.

I am proud that we recently commissioned a new 30-megawatt, MGE Energy wind farm. In the last year, our wind energy capacity increased from 11 to 87 megawatts with the new project and two other wind farms from which we purchase energy.

Source (rounded) \$1.41 \$0.60

to our shareholders

Minneapolis

This increase in renewable energy has allowed us to significantly expand our green pricing program and lower the cost of our green pricing for customers. Our Green Power Tomorrow program provides a clean mix of solar and wind power.

While these renewable energy projects are moving forward, we also are developing new baseload energy. MGE Energy is investing in a cleaner coal power plant expansion on Lake Michigan. This state-of-the-art generation facility will supply affordable, reliable energy with far lower emission rates than standard coal-fired plants.

Commitments to the environment

As we modernize our fleet of electric generation, we recognize our responsibility to protect the environment. MGE developed a 10-year electric supply plan—called Energy 2015—that is anticipated to produce significantly lower emission rates. We expect the combination of more green energy, switching to new coal generation, greater customer conservation and new technologies to drive down emission rates for carbon dioxide, sulfur dioxide, nitrogen oxide, particulates and mercury.

Part of the way we pursue environmental innovation is to invest in demonstration projects. For example, we have more than a dozen solar photovoltaic demonstrations in our service area. We learn which specific solar technologies are most effective in our climate and best serve our customers.

Prospering economy

Innovation goes hand-in-hand with the rapidly growing, knowledge-based economy in our service area. Madison is in the center of the Midwest's I-Q Corridor. In fact, bizjournals.com lists Madison as the fourth "brainiest" medium-sized city in the nation.

For years, our company has been in step with the area's emerging economies—first the high-tech fields and more recently the biotech industry. Life sciences is a \$5 billion industry in Wisconsin, and it's centered in Madison. With \$125 million earmarked for a new federal bioenergy research center here, we expect the biofuels sector to be the next significant frontier.

Our service territory is not just a high-tech powerhouse. The greater Madison area also is a wonderful place to live. Middleton, a flourishing suburb, was named No. 1 of the 100 "Best Places to Live" nationally by *Money* magazine. It's no wonder our area is growing. From 2000 to 2030, Dane County's population is estimated to grow 36%—adding more than 150,000 new residents.

Chicago Chicago The Midwest's I-Q Corridor is a region packed with ideas and

The Midwest's I-Q Corridor is a region packed with ideas and a knowledge-based economy—especially in biotech, biofuels and technology development.

Projects to meet growing demand

This vibrant growth requires infrastructure to meet increasing energy demands. In addition to investing in new generation, we also continually improve the systems that deliver energy. Just southwest of Madison, Fitchburg and Verona are rapidly expanding. In 2007, MGE installed new natural gas lines and other facilities to boost gas capacity for this area.

Left photo: Tim Caruso (left) and Tony Masino help oversee an MGE natural gas expansion project.

Right photo: Ken Alderson (left) and Scott Lindloff check control panels in MGE's East Campus Substation.

MGE made significant upgrades to the electric system serving parts of downtown Madison and the University of Wisconsin-Madison campus. To power this fast-growing area, the capacity of the East Campus Substation was increased by 50%. Three new building developments—with a total of \$380 million in construction—are significantly increasing electric load within blocks of the substation.

Employee innovation

We encourage our employees to make business improvements through innovation. Our employees were resourceful in creating a flexible database to manage compliance with new federal electric reliability standards. These standards are designed to protect the country's electric system. Other utilities have turned to MGE for advice on creating their own databases.

Another group of creative employees faced a daunting task last summer. Raging floodwaters submerged parts of western Wisconsin where MGE provides natural gas service. Worst hit was the village of Gays Mills. Drawing on their ingenuity, our employees used the assistance of a swiftwater rescue team to safely turn off submerged gas valves. Later, employees isolated the areas with the worst flooding to keep other customers in service.

Director changes

Londa J. Dewey, president of The QTI Group, was elected to the Board of Directors effective Feb. 1, 2008. Donna K. Sollenberger resigned from the board in 2007 after seven years of dedicated service. We wish her well in her new job in Houston.

Built on innovation

You can count on us to combine innovation and initiative with our sound business principles. We are committed to excellent customer service and outstanding shareholder returns.

Thank you for your confidence in MGE Energy.

Gary J. Wolter

Chairman, President and Chief Executive Officer

We use new electric generation technologies to create a cleaner energy future.

Our experience with wind energy illustrates that innovation is core to how we conduct our business. In the early 1980s, we began monitoring potential wind sites. By 1984, MGE had three of its own pilot wind projects.

In 1999, MGE took a bold step and constructed the largest wind farm east of the Mississippi. This wind farm remains an integral part of our growing renewable energy mix.

In the last year, we grew our wind power capacity by nearly eight times—from 11 to 87 megawatts. We are harvesting clean wind energy from a new \$58 million MGE wind farm and purchasing energy from two other installations.

Innovating with technology is one key to meeting tomorrow's energy needs.

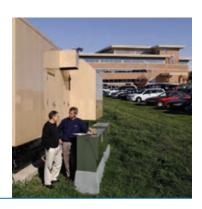

At MGE Energy's new wind farm, a crane hoists the blades to the top of a 260-foot-tall tower.

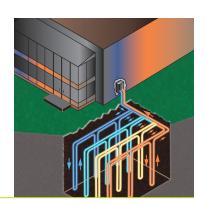

Modernizing generation assets. MGE's Energy 2015 plan is a comprehensive 10-year electric generation strategy. We are retiring old, less efficient coal generation while investing in a cleaner coal power plant with state-of-the-art emission controls. Our renewable wind resources have increased nearly eight times. In 2005, MGE commissioned a natural gas-fired cogeneration facility, one of the cleanest and most efficient power plants in the Midwest. MGE works to provide the best balance of cost and efficiency to deliver reliable energy with the least environmental impacts.

MGE Energy is a partner in We Energies' Oak Creek power plant expansion. This cleaner coal facility is under construction and set to come online beginning in 2009.

Improving reliability. We look for win-win situations that can benefit local businesses while improving electric reliability for all customers. In 1998, MGE launched a new program—the Backup Generation Service. Since then, the program's success has been firmly established. Customers in the program pay a charge for the assurance of backup generation. If power to the customer's facility is interrupted, the generator automatically starts. The program's 55 generators also provide an additional 45 megawatts of generating capacity for MGE to use during peak electric use periods.

Bob Connor (right), an MGE account manager, and Kevin Snitchler, a Dean Health System administrator, check the large generator behind them. The Dean West Clinic and Urgent Care uses backup generation service.

Demonstrating technologies. For years, MGE has invested in pilot technology projects to better understand highly efficient and renewable energy systems. The geothermal heat pump, an evolving technology, is an example. MGE recently installed geothermal heat pumps to handle the heating and air-conditioning needs at Madison's new Lussier Community Center. The unit extracts the earth's heat and uses it to help warm the building in the winter and cool it in the summer. We expect an overall energy savings of 30%. MGE gains expertise from technology projects that we then share with customers.

A geothermal heat pump uses a series of looped pipes to capture the earth's temperature. Fluid circulates through the pipes and transfers the energy to pumps that amplify the heating or cooling.

MGE Energy helps seed future economic growth. We support the discoveries that spur our local high-tech, biotech economy.

MGE has long encouraged business incubators. In 1989, the MGE Innovation Center opened with space for 12 tenants at the UW Research Park. The very first tenant was a small biotech start-up called Novagen—now a successful Madison-based company. In total, the Innovation Center has spawned over 70 high-tech and biotech firms.

We have provided support for eight business incubators. Madison has more business incubators per capita than most U.S. cities. In fact, Madison is one of 30 "Fast Cities" around the world, according to Fast Company magazine. Fast Cities are places "where the most important ideas and the organizations of tomorrow are centered."

MGE Energy is dedicated to promoting economic success.

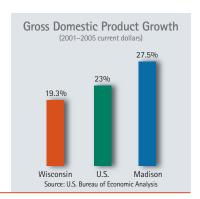

Anthony Lauer is an associate scientist at Mirus Bio Corp.—a leader in gene therapy and gene silencing. Mirus is graduating from the MGE Innovation Center and expanding into a new facility with 50% more space.

Tapping the potential. Bioenergy research is gaining a strong foothold in Madison with the new Great Lakes Bioenergy Research Center. The University of Wisconsin–Madison earned a \$125 million federal grant to fund the new center, which will research ways to convert plant matter into fuel for automobiles and power plants. MGE is one of the center's corporate partners and was instrumental in helping UW–Madison secure the grant. The center may become a magnet in Madison for bioenergy companies.

Phyllis Wilhelm (left), MGE's economic development director, and Molly Jahn, dean of the UW's College of Agriculture and Life Sciences, collaborated to secure the bioenergy grant.

Healthy economy. Madison, with its wealth of high-tech and biotech companies, is well positioned to compete in the global economy of the 21st century. One important indicator is the growth of Madison's gross domestic product (GDP), which is stronger than the state's or nation's. The GDP is a key instrument used to measure an economy. And, Madison's success has not gone unnoticed. In 2007, Madison was named in the nation's top 10 metro areas for income growth and in the top 15 metro areas for companies actively looking to expand or relocate their facilities.

Madison's gross domestic product surpassed the state's and nation's from 2001 to 2005. The GDP measures the total market value of goods and services produced.

Locally grown. MGE's Shared Savings financing program is about to reach the \$25 million mark after 15 years of helping grow local businesses. Firms can use a Shared Savings loan to finance energy efficiency improvements to their businesses. The companies pay off the financing with savings in their energy budgets. Businesses save energy and money, while MGE is able to help support the local economy. A recent loan to Eflexgroup.com, an innovator in the flexible spending account industry, helped the company relocate to a new, larger corporate facility.

Ric Joyner (left), COO of Eflexgroup.com, worked with Randy Popp, an MGE engineer, to secure a \$200,000 loan for high-efficiency heating and cooling equipment.

Innovation is key to our efforts to create a healthier environment.

More than 30 years ago, MGE and the Wisconsin Utilities Association built an experimental solar-powered home. As the technology advanced, so did we. In the mid-1980s, MGE conducted various solar photovoltaic energy research projects.

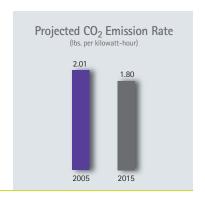

By the early 2000s, solar technology was far more efficient. We launched new demonstration projects including solar installations on all the high schools in our electric service area.

We learn about renewable technology options to find ways to offer innovative programs. Now, we are launching a new program to encourage customers to install their own solar units that feed into our electric grid.

Renewable energy is growing at MGE Energy.

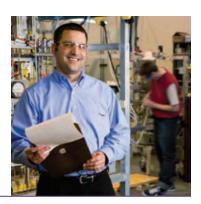

New solar panels collect energy on the 100-year-old home of MGE customers Jean and Dr. Jonathan Patz, a university professor and a member of a U.N. climate change panel awarded the 2007 Nobel Peace Prize.

Reducing emissions. We work to protect our environment while providing reliable energy. MGE anticipates its Energy 2015 plan will produce lower emission rates across the board—even though electric use is growing. Energy 2015 is a balanced plan that combines building more renewable energy, retiring older coal facilities, switching to cleaner coal generation and encouraging greater customer conservation. This combination is projected to lower emission rates for carbon dioxide, sulfur dioxide, nitrogen oxide, particulates and mercury by 2015.

Even though carbon dioxide (CO_2) is not currently regulated, MGE is working to reduce CO_2 emissions. We project a decrease in MGE's CO_2 emission rates. For more details, see our Environmental Responsibility Report on mgeenergy.com.

Renewable fuels. MGE has supported Virent Energy System's ground-breaking work to turn plant sugars into fuel for generators and engines. Virent is a local company commercializing technology that can help us move from a fossil-fuel economy to one using renewable fuels. In a demonstration project, Virent's SuperNatural" gas prototype system fuels an internal combustion engine that can generate 10 kilowatts of electricity for MGE customers. We recognize how this type of visionary technology is needed to drive a cleaner future.

Greg Keenan, vice president of business development at Virent Energy Systems, leads engineering and business development. MGE was an early, local supporter of Virent that has grown significantly since it was founded in 2002.

Mercury free. MGE is a leader in installing mercury-free encoders in the meters on customers' homes and businesses. When MGE decided to install an automated meter reading system, we asked the manufacturer to develop mercury-free encoders—which have now become the industry standard in the United States. We look for opportunities to go beyond compliance in day-to-day operations and pursue clean options.

This small encoder allows MGE to read meters remotely. With about 275,000 encoders throughout our service area, it was important to us that the devices be mecury free and environmentally friendly.

MGC ENERGY

We work hard to listen and stay connected. This is how we make a difference in the communities we serve.

Responding to customer needs is a long-standing commitment. In the 1980s, when the United States faced an energy crisis, MGE stepped up its conservation efforts. Our home energy audit program ranked second in the nation in 1983.

More recently, open discussions at our townhall meetings, called Community Energy Conversations, helped us better understand our customers' preferences for future energy supply. The discussions shaped our Energy 2015 plan.

Former MGE Chairman
Frederick Mackie (above)
explained our position well
in 1976: "We do want our
customers and stockholders
to understand the decisions
we must make are for
the sake of running our
business properly and in
response to their needs.
This presents a real challenge, but we believe it
can be met."

It's a challenge we still meet today.

Mayra Medrano, an MGE customer service representative, meets with MGE green power customers Vickie Hackbarth and Mark Shimasaki.

Solar lighting. MGE and the University of Wisconsin-Madison worked closely with the community to plan the West Campus Cogeneration Facility. This natural gas-fired plant provides electricity to MGE customers and heating/cooling to the campus. MGE and UW-Madison joined with others and made commitments to improve our local environment. Now, we are completing our final commitment with solar lighting along a new campus bike path. This \$220,000 photovoltaic technology project draws attention to renewable energy while providing safe lighting at night. The bike path opens in 2008.

Bob Stoffs (left), an MGE community services manager, and Rob Kennedy, a UW-Madison transportation supervisor, check a solar panel during bike path construction.

community ties. We continuously create opportunities for stakeholders to engage with us. MGE asked community members to serve on an advisory committee to help shape our Environmental Cooperative Agreement with the Wisconsin Department of Natural Resources. We recently renewed the voluntary five-year agreement that commits us to superior environmental performance at Blount Generating Station.

Several Community Environmental Advisory Group members meet at MGE including (left to right) John Shenot, DNR environmental assistance coordinator; Rich Bogovich, a local environmentalist; Michael Ricciardi, MGE's environmental director; and Judy Olson, former Madison alderperson.

Power of working together. When we partner with others, we can reach customers more effectively. For example, we are working with the City of Madison on the city's Clean Energy Challenge to reduce greenhouse gases. Some of our most rewarding collaborations involve teaching the next generation. MGE reaches thousands of students through classroom programs. Last summer, we took another step with the Boys and Girls Club and sponsored a series of energy education projects.

Jesse Shields (right), an MGE marketing representative, helps Anthony Washington cook a hot dog in a solar oven. Children at the Boys and Girls Club of Dane County constructed solar ovens to learn more about clean, renewable energy sources.

Consolidated Statements of Income
