### PetroQuest Energy – Focused On Resources, Returns, And Growth

As investors and regular readers of PetroQuest's annual report know, I am always an optimist. I believe in the resilience of our national economy and the recovery in commodity prices that should accompany improving macro-economic conditions. I think 2013 was a pivotal year for overall economic conditions as well as commodity prices in the United States; although it may be a modest macro-economic recovery, I do think an economic recovery is underway.

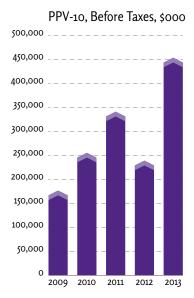

#### To Our Stockholders

The shale revolution has demonstrated how abundant our natural gas resources are in this country. I am a proponent of utilizing natural gas as both a bridge fuel in our nation, as well as an exported commodity. I am not convinced we will export gas on sufficient a scale to fully expose domestic gas prices to international market pricing, but I certainly believe exportation can be used to moderate the volatility of domestic natural gas prices. Regarding the use of natural gas as a bridge fuel, over the past few years our industry has touted the resource volumes discovered in various U.S. shale gas plays, and although the wheels of change are often fairly

slow to rotate in the United States, I think the trend of commercial fleet conversions to natural gas as a transportation fuel will continue. As this happens, I expect that there will eventually be infrastructure constructed to support the long-haul over-the-road transportation fleets on our interstate highway network. This development will be the strategic signal that large-scale use of natural gas in the transportation sector is underway.

There has been a lot of attention in our industry, within both the political establishment and media, regarding the potential to export natural gas. Several facilities along the U.S. Gulf Coast and elsewhere are nearing completion, which should allow some level of export gas throughput. Obviously this is a positive step for producer companies like PetroQuest, and any daily export volumes should positively impact gas prices from the demand side. Given that gas prices in Europe and the far East range between two and eight times higher than domestic prices, it only makes good business sense that we should be able to export a small portion of our resources to capture some of this arbitrage opportunity. Job creation to manufacture and maintain full-scale liquefaction facilities throughout the United States would be a benefit on a national level, and depending on how much gas ultimately is exported, the national benefit might extend into the geopolitical arena. Recent events in the Ukraine, along with historical Eastern European reliance on Russia for gas imports, may ultimately result in a global gas market served by a variety of LNG exporters. Exporting LNG from the U.S. could potentially benefit not only the U.S. economy, but enable the U.S. to compete globally in a variety of markets as nations like Poland and the Ukraine seek diversified energy supplies.

Together, there are a number of macro-economic and industry-specific developments that should positively impact natural gas prices over the next few years. 2013 was a better year than 2012 in terms of average natural gas prices, and as a result of the extreme winter we have just witnessed, 2014 should be better than last year. I have not discussed oil price fundamentals because I think over the next few years the oil markets should remain fairly stable. Yes, there will be short-term seasonal price fluctuations and the occasional geopolitical event may impact oil prices, but in general the increasing productivity of oil prone basins in the U.S. continues to add to overall U.S. oil production. At PetroQuest we remain focused on finding and developing oil or natural gas liquids-rich projects to generate cash flow, but I still think there is higher upside potential for natural gas price moves than oil. This is why I think it is so important to consider macro-economic factors when considering an investment in PetroQuest given our estimated 2014 production split is approximately 70% natural gas and 30% oil and natural gas liquids.

#### **Deep Resources**

2013 was an important year for PetroQuest as we made the largest acquisition in the history of our company. We achieved company records for annual production as well as proved reserves. Combined with our active leasing campaign, we have laid the foundation for 2014 to be a year of production and reserve growth in excess of 20% as we fully expect to break the record achieved in 2013. We plan to drill 80% more gross wells in 2014, which is a continuation of our overall operational theme of the past few years. With deep resources in our asset portfolio, our focus for 2014 turns to efficient execution of our operations and higher-return projects.

Investors and regular readers of this letter are familiar with the overall PetroQuest strategy of the past ten years, namely to build, expand and develop long-life onshore resources plays with cash flow generated from our expertise in finding, developing and operating Gulf Coast assets. These two asset classes are complimentary in that the free cash flow derived from large, high-return Gulf Coast projects can be redeployed into our Woodford, Cotton Valley and emerging Mississippian Lime positions.

The overall objective of this growth strategy is to increase production and reserve growth each year with minimal reinvestment capital expenditures in order to generate the cash flow required to drill and develop our onshore resource projects. It's true that our acquisition in 2013 was achieved through a bond issuance, but the important thing for shareholders to bear in mind when evaluating PetroQuest is that we are committed to growing production and reserves on debt adjusted per share basis.

Gulf Coast Experience, Gulf Coast Expertise, Gulf Coast Cash Flow

One of my observations in my 30+ years of energy sector experience is the disparity between company operating strategies and the ever-shifting asset favorites among energy investors. This is a natural phenomenon, particularly over the past eight years with the discoveries of various onshore shale basins, but we have deliberately maintained our focus and expertise in Gulf Coast assets as a means to generate cash flow for other projects, rather than chasing the latest "hot" trends and paying exorbitant leasehold rates. This strategy works. In 2012 Gulf Coast assets generated approximately \$50 million in cash flow while requiring less than \$20 million in capital expenditures, and in 2013 they generated nearly \$80 million in cash flow while spending approximately \$40 million. In 2014, we project our free cash flow growth trend will continue while spending only approximately \$30 million; in fact, we are allocating only 5% of our capital budget to the offshore Gulf of Mexico in 2014, while 20% will be allocated to onshore Gulf Coast projects. That is a perfect demonstration of the value we create by operating in the Gulf Coast because when Gulf Coast wells are successful they can generate large production and reserve volumes, which in turn create very large cash flow numbers even in lower commodity price environments. Very simply, this is why we continue to prioritize Gulf Coast assets as critical elements of the PetroQuest asset mix.

To support this strategy, last year PetroQuest spent approximately \$190 million to acquire shallow offshore proved reserves of 5.3 million barrels of oil equivalent (BOE), which represents a price of \$45,000 per flowing BOE and finding and development costs of \$36.41 per BOE. Even more notable is the fact the transaction included an additional 3.2 million BOE of possible reserves (P3). These assets generated \$28.3 million in free cash flow in the second half of 2013 and are projected to generate additional substantial free cash flow during 2014. PetroQuest will operate 80% of these reserves, and will re-deploy the cash flow into our long-lived assets to grow production and reserves onshore.

Further, we remain both committed to and excited by our La Cantera/Thunder Bayou projects, which are located in Vermilion Parish, Louisiana. We believe the La Cantera discovery alone could ultimately produce over 180 billion cubic feet equivalent (Bcfe) of natural gas, within a deep geologic expression containing several shallow fields that have produced from 529 Bcfe to over 1.4 trillion cubic feet equivalent (Tcfe).

We have laid the foundation for 2014 to be a year of production and reserve growth in excess of 20%.

During 2013, the three wells producing at La Cantera contributed more than \$28.1 million in net field level cash flow. The La Cantera/Thunder Bayou complex is a series of very large fields that contain multi-pay zones that we are only now beginning to fully understand. La Cantera contains booked volumes of 103 billion cubic feet (Bcf) of proved reserves and we estimate Thunder Bayou contains un-risked reserves potential of 162 Bcfe. We expect to spud Thunder Bayou during the second quarter of 2014 and if successful, this project should contribute significant levels of free cash flow over the next several years.

### Onshore Resource Plays - Accelerate Development, Focus On Returns

Now that I have outlined our strategy in terms of generating cash flow from our Gulf Coast assets, how are we going to deploy that capital to grow the company? The answer lies in our continuing efforts to acquire, drill and develop onshore resource plays. For many years PetroQuest has been focused in the Arkoma Woodford shale basin in southeastern Oklahoma. We initially leased acreage and began drilling in this area in 2004 as part of our diversification effort, which continues, to create a company with a production and reserves split between high-impact shallow gulf projects and long-lived onshore resource plays that generate steady production and reserve growth over time. Our Woodford shale program has proven to be the crown jewel in our onshore portfolio.

One of the critical aspects to leading an energy company is creating an environment in which the team can generate prospects, pursue ideas, and execute our programs by following the strategic vision of asset diversity set by the company's Board and executives. Our initial leasing and drilling campaign in the Woodford focused on dry gas projects in our Lake McAlester and Hoss Areas, but when gas prices began to fall a few years ago, our team was tasked with sourcing natural gas liquids projects. Our team did a magnificent job in creating new liquids-rich drilling opportunities for PetroQuest in our West Relay and North Relay areas, located in Hughes County, Oklahoma. We began leasing acreage there four years ago and have continued to add to our position since, which now comprises over 30,000 acres. These are the areas in which we will focus our 2014 Woodford drilling program, as we plan to drill between 30-50 liquids-rich wells using multi-pad drilling sites, funding this program through the combination of Gulf Coast-generated cash flow and approximately \$50 million of remaining funds in our Woodford joint venture.

In 2013 we allocated 29% of our capital spending to our Woodford program, and in 2014 we are going to increase that to 50%, which is in recognition of the superior rates of return we are generating in addition to our intention to dramatically increase our pace of operations in this area. Last year I wrote about our continuing evaluation of our Woodford position in order to high-grade our drilling prospects, prioritizing liquids-rich prospects. This work has been completed and PetroQuest is in a position to drill over three times as many Woodford wells in 2014 as we did during 2013. This should result in very significant production growth and reserve additions in our Woodford acreage. In the last nine years we have drilled 127 Woodford wells; in 2014-15 alone we expect replicate nearly 80% of this activity as we plan to drill a total of 100 wells.

Along with our Woodford program, we continued to move our East Texas Cotton Valley play forward in 2013. Rates of return on our liquids-rich Cotton Valley acreage range between 40% at a \$3.50 per MMcfe gas price, to 66% at \$4.50 per MMcfe. Our operational efficiency has improved, with average initial production rates 44% higher in 2013 than 2011; in 2013, PetroQuest Cotton Valley well averaged 6.3 MMcf of gas and 458 BOE of natural gas liquids, per well. This is an area that we continue to evaluate because of its competitive economics at current gas prices as well as PetroQuest's running room in terms of our drilling inventory. As I write this letter, PetroQuest has some 210 gross Cotton Valley horizontal locations, 188 Bossier horizontal locations and 197 Travis Peak vertical locations with over 500 additional prospective Upper and Middle Cotton Valley horizontal wells. This is an area in which our operations team will be drilling wells for years to come. We plan to allocate 25% of our capital spending to East Texas in 2014 to drill 6 horizontal wells.

Our Woodford shale program has proven to be the crown jewel in our onshore portfolio. Finally, we continued to collect seismic and scientific data on our Mississippian Lime acreage in Northern Oklahoma in 2013. We are in the process of developing and assessing our reservoir models to identify our best drilling prospects, and I expect this effort to continue for the balance of 2014 as our technical teams further refine our understanding of this play. We do know that the Mississippian Lime is highly variable, but we are encouraged that our initial results are in line with other industry well performance in terms of initial production rates. This area will remain a focus area for PetroQuest in 2014, but we do not plan to allocate a great deal of capital or drill many wells in 2014 given the high-impact projects we have ahead of us in the Gulf Coast/Gulf of Mexico, Woodford Shale and Cotton Valley.

#### Farewell To A Good Friend

Let me end this year's President's letter by recognizing one of the long-term visionaries who contributed mightily to the success of PetroQuest Energy, Dan Fournerat. Dan played a pivotal role in the success of PetroQuest Energy throughout his 28 year association with the Company. While he formally joined the company in 2001, he served as a trusted legal advisor since the Company's formation. We were blessed when Dan agreed to join the company as our General Counsel and Chief Administrative Officer, a position he held until his untimely passing in September 2013. Dan was a devoted family man and a respected leader in our community, and he will be sorely missed.

#### PetroQuest Employees – Our Number One Resource

As we draw a line under 2013 with this annual report and look forward to a successful 2014, I want to compliment PetroQuest's employees and contractors from the executive level, to our technical staff, our field operations team, finance/accounting employees, and the administrative staff, as each and every one of our 127 employees plays a critical role to our organization and its success. In the end, investors will evaluate PetroQuest on its returns and financial performance, but in leading the company, I know there is much more to our story than just financial and operational metrics. But I also know there is so much more to our story in terms of our employees who tirelessly work on behalf of our investors to produce results. Each and every member of our team should be proud of their performance in 2013, and I have great confidence and enthusiasm about a positive future for PetroQuest Energy in 2014 and beyond.

Charles T. Goodson

#### CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K (this "Form 10-K") contains "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). All statements other than statements of historical facts included in and incorporated by reference into this Form 10-K are forward looking statements. These forward-looking statements are subject to certain risks, trends and uncertainties that could cause actual results to differ materially from those projected.

Among those risks, trends and uncertainties are:

- the volatility of oil and natural gas prices;
- our indebtedness and the significant amount of cash required to service our indebtedness;
- the recent financial crisis and continuing uncertain economic conditions in the United States and globally;
- our ability to obtain adequate financing when the need arises to execute our long-term strategy and to fund our planned capital expenditures;
- limits on our growth and our ability to finance our operations, fund our capital needs and respond to changing conditions imposed by restrictive debt covenants;
- our ability to find, develop, produce and acquire additional oil and natural gas reserves that are economically recoverable;
- approximately 40% of our production being exposed to the additional risk of severe weather, including hurricanes and tropical storms, as well as flooding, coastal erosion and sea level rise;
- losses and liabilities from uninsured or underinsured drilling and operating activities;
- our ability to market our oil and natural gas production;
- changes in laws and governmental regulations, increases in insurance costs or decreases in insurance availability, and
  delays in our offshore exploration and drilling activities that may result from the April 22, 2010 sinking of the Deepwater
  Horizon and subsequent oil spill in the Gulf of Mexico;
- our need to obtain bonds or other surety to maintain compliance with regulations as well as regulatory initiatives relating to oil and natural gas development, hydraulic fracturing, and derivatives;
- proposed changes to U.S. tax laws;
- competition from larger oil and natural gas companies;
- Securities and Exchange Commission (sometimes referred to herein as the "SEC") rules that could limit our ability to book proved undeveloped reserves in the future;
- the likelihood that our actual production, revenues and expenditures related to our reserves will differ from our estimates of proved reserves;
- our ability to identify, execute or efficiently integrate future acquisitions;
- ceiling test write-downs resulting, and that could result in the future, from lower oil and natural gas prices;
- losses or limits on potential gains resulting from hedging production;
- the unavailability, high cost or shortages of rigs, equipment, raw materials, supplies or personnel;
- the loss of key management or technical personnel;

- the operating hazards attendant to the oil and gas business;
- governmental regulation relating to hydraulic fracturing and environmental compliance costs and environmental liabilities;
- the operation and profitability of non-operated properties;
- potential conflicts of interest resulting from ownership of working interests and overriding royalty interests in certain of our properties by our officers and directors;
- the loss of our information and computer systems; and
- the impact of terrorist activities on global economies.

Although we believe that the expectations reflected in these forward-looking statements are reasonable, we cannot assure you that such expectations reflected in these forward looking statements will prove to have been correct.

When used in this Form 10-K, the words "expect," "anticipate," "intend," "plan," "believe," "seek," "estimate" and similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain these identifying words. Because these forward-looking statements involve risks and uncertainties, actual results could differ materially from those expressed or implied by these forward-looking statements for a number of important reasons, including those discussed under "Management's Discussion and Analysis of Financial Condition and Results of Operations," "Risk Factors" and elsewhere in this Form 10-K.

You should read these statements carefully because they discuss our expectations about our future performance, contain projections of our future operating results or our future financial condition, or state other "forward-looking" information. You should be aware that the occurrence of any of the events described under "Management's Discussion and Analysis of Financial Condition and Results of Operations," "Risk Factors" and elsewhere in this Form 10-K could substantially harm our business, results of operations and financial condition and that upon the occurrence of any of these events, the trading price of our common stock could decline, and you could lose all or part of your investment.

We cannot guarantee any future results, levels of activity, performance or achievements. Except as required by law, we undertake no obligation to update any of the forward-looking statements in this Form 10-K after the date of this Form 10-K.

As used in this Form 10-K, the words "we," "our," "us," "PetroQuest" and the "Company" refer to PetroQuest Energy, Inc., its predecessors and subsidiaries, except as otherwise specified. We have provided definitions for some of the oil and natural gas industry terms used in this Form 10-K in "Glossary of Certain Oil and Natural Gas Terms" beginning on page 52.

#### Part I

#### Item 1 and 2. Business and Properties Items

#### Overview

PetroQuest Energy, Inc. is an independent oil and gas company incorporated in the State of Delaware with operations in Oklahoma, Texas, and the Gulf Coast Basin. We seek to grow our production, proved reserves, cash flow and earnings at low finding and development costs through a balanced mix of exploration, development and acquisition activities. From the commencement of our operations in 1985 through 2002, we were focused exclusively in the Gulf Coast Basin with onshore properties principally in southern Louisiana and offshore properties in the shallow waters of the Gulf of Mexico shelf. During 2003, we began the implementation of our strategic goal of diversifying our reserves and production into longer life and lower risk onshore properties. As part of the strategic shift to diversify our asset portfolio and lower our geographic and geologic risk profile, we refocused our opportunity selection processes to reduce our average working interest in higher risk projects, shift capital to higher probability of success onshore wells and mitigate the risks associated with individual wells by expanding our drilling program across multiple basins.

We have successfully diversified into onshore, longer life basins in Oklahoma and Texas through a combination of selective acquisitions and drilling activity. Beginning in 2003 with our acquisition of the Carthage Field in Texas through 2013, we have invested approximately \$1.1 billion into growing our longer life assets. During the ten year period ended December 31, 2013, we have realized a 95% drilling success rate on 918 gross wells drilled. Comparing 2013 metrics with those in 2003, the year we implemented our diversification strategy, we have grown production by 294% and estimated proved reserves by 262%.

At December 31, 2013, 81% of our estimated proved reserves and 63% of our 2013 production were derived from our longer life assets.

As a result of the impact of low natural gas prices on our revenues and cash flow, we have focused on growing our reserves and production through a balanced drilling budget with an increased emphasis on growing our oil and natural gas liquids production. In May 2010, we entered into the Woodford joint development agreement ("JDA"), which provided us with \$85 million in cash during 2010 and 2011, along with a drilling carry that we have utilized since May 2010 to enhance economic returns by reducing our share of capital expenditures in the Woodford Shale and the Mississippian Lime. During February 2012, we amended the JDA to accelerate the entry into Phase 2 of the drilling program effective March 1, 2012 and satisfy the drilling carry ratio. Under the amended JDA, the Phase 2 drilling carry was expanded to provide for development in both the Mississippian Lime and Woodford Shale plays whereby we will pay 25% of the cost to drill and complete wells and receive a 50% ownership interest. The Phase 2 drilling carry is subject to extensions in one year intervals and as of December 31, 2013, approximately \$51.6 million remained available. See "Liquidity and Capital Resources - Source of Capital: Joint Ventures."

During 2013, we acquired certain producing properties in the shallow waters of the Gulf of Mexico pursuant to the Purchase and Sale Agreements, each dated as of June 19, 2013, between our subsidiary PetroQuest Energy, L.L.C. and each of Hall-Houston Exploration II, L.P., Hall-Houston Exploration IV, L.P., and GOM-H Exploration, LLC, respectively ("Gulf of Mexico Acquisition"). The aggregate purchase price of the Gulf of Mexico Acquisition was \$188.8 million and it contributed 30.5 Bcfe to our estimated proved reserves at December 31, 2013 as well as 4.5 Bcfe of production during 2013. Since entering into the JDA and as a result of the Gulf of Mexico Acquisition as well as the success of our drilling programs in each of our operating areas, we have grown our estimated proved reserves by 69% and production by 11% since year end 2009, including a 36% increase in our oil and natural gas liquids production during 2013.

#### **Gulf of Mexico Acquisition**

On July 3, 2013, we closed the Gulf of Mexico Acquisition for an aggregate cash purchase price of \$188.8 million, reflecting an effective date of January 1, 2013. The Gulf of Mexico Acquisition was financed with the net proceeds from the issuance of an additional \$200 million in aggregate principal amount of our 10% Senior Notes due 2017, (sometimes referred to herein as our "10% senior notes"). The transaction included 16 gross wells located on seven platforms (the "Acquired Assets").

During 2013, the Acquired Assets contributed 4.5 Bcfe of total production, including 235,000 barrels of oil, and added 30.5 Bcfe of estimated proved reserves as of December 31, 2013. As a result of the Gulf of Mexico Acquisition, our acreage position in the Gulf Coast Basin increased 23% to 46,801 net acres. See "Note 2 - Acquisition" in Item 8. Financial Statements and Supplementary Data for additional details related to this transaction.

We believe the Gulf of Mexico Acquisition represents both a strategic and transformative transaction for us. This transaction builds upon our existing strategy of utilizing free cash flow from our shorter life, Gulf Coast Basin assets to develop our longer-life resource assets. As evidenced by the larger percentage of our production and estimated proved reserves now located in our longer lived basins, we have successfully leveraged our Gulf Coast free cash flow to help fund our substantial diversification efforts over the past several years. We plan to utilize a portion of the free cash flow generated from these acquired properties to accelerate the development of our Woodford Shale and Cotton Valley resource plays. In addition, based upon our experience and successful track record in exploiting reservoirs in the Gulf Coast Basin and Gulf of Mexico, we believe that we will be able to create value above the current estimated proved reserves associated with the Acquired Assets.

#### **Business Strategy**

Maintain Our Financial Flexibility. Because we operate approximately 89% of our total estimated proved reserves and manage the drilling and completion activities on an additional 4% of such reserves, we expect to be able to control the timing of a substantial portion of our capital investments. Our 2014 capital expenditures, which include capitalized interest and overhead but exclude acquisitions, are expected to range between \$140 million and \$150 million. We expect to be able to actively manage our 2014 capital budget in the event commodity prices, or the health of the global financial markets, do not match our expectations. During 2014, we also plan to maintain our commodity hedging program and, as in during prior years, we may continue to opportunistically dispose of certain non-core or mature assets to provide capital for higher potential exploration and development properties that fit our long-term growth strategy. During December 2012, we sold our non-operated Arkansas assets for \$8.5 million. During January 2013, we sold 50% of our saltwater disposal systems and related surface assets in the Woodford for net proceeds of approximately \$10 million. During December 2013, we sold our non-operated Wyoming assets for \$1.0 million.

Pursue Balanced Growth and Portfolio Mix. We plan to pursue a risk-balanced approach to the growth and stability of our reserves, production, cash flows and earnings. Our goal is to strike a balance between lower risk development activities and higher risk and higher impact exploration activities. We plan to allocate our 2014 capital investments in a manner that continues

to geographically and operationally diversify our asset base, while focusing on oil and natural gas liquids projects as the pricing for these products is presently expected to be more attractive than that of natural gas. Through our portfolio diversification efforts, at December 31, 2013, approximately 81% of our estimated proved reserves were located in longer life and lower risk basins in Oklahoma and Texas and 19% were located in the shorter life, but higher flow rate reservoirs in the Gulf Coast Basin. In terms of production diversification, during 2013, 63% of our production was derived from longer life basins versus 75% and 66% in 2012 and 2011, respectively. Our 2013 production was comprised of 77% natural gas, 11% oil and 12% natural gas liquids.

Target Underexploited Properties with Substantial Opportunity for Upside. We plan to maintain a rigorous prospect selection process that enables us to leverage our operating and technical experience in our core operating areas. During 2014, we intend to primarily target properties that provide us with exposure to oil or natural gas liquids reserves and production. In evaluating these targets, we seek properties that provide sufficient acreage for future exploration and development, as well as properties that may benefit from the latest exploration, drilling, completion and operating techniques to more economically find, produce and develop oil and gas reserves. We believe that our deep experience and expertise in operating in the Gulf of Mexico can enhance the value of the assets we acquired in the Gulf of Mexico Acquisition.

Concentrate in Core Operating Areas and Build Scale. We plan to continue focusing on our operations in Oklahoma, Texas and the Gulf Coast Basin. Operating in concentrated areas helps us better control our overhead by enabling us to manage a greater amount of acreage with fewer employees and minimize incremental costs of increased drilling and production. We have substantial geological and reservoir data, operating experience and partner relationships in these regions. We believe that these factors, combined with the existing infrastructure and favorable geologic conditions with multiple known oil and gas producing reservoirs in these regions, will provide us with attractive investment opportunities, as evidenced by the Gulf of Mexico Acquisition.

Manage Our Risk Exposure. We plan to continue several strategies designed to mitigate our operating risks. We have adjusted the working interest we are willing to hold based on the risk level and cost exposure of each project. For example, we typically reduce our working interests in higher risk exploration projects while retaining greater working interests in lower risk development projects. Our partners often agree to pay a disproportionate share of drilling costs relative to their interests, allowing us to allocate our capital spending to maximize our return and reduce the inherent risk in exploration and development activities. We also strive to retain operating control of the majority of our properties to control costs and timing of expenditures and we expect to continue to actively hedge a portion of our future planned production to mitigate the impact of commodity price fluctuations and achieve more predictable cash flows.

#### 2013 Financial and Operational Summary

During 2013, we invested \$328.1 million in exploratory, development and acquisition activities. We drilled 36 gross exploratory wells and 4 gross development wells realizing an overall success rate of 88%. These activities were financed through our cash flow from operations, cash on hand, issuance of 10% senior notes and borrowings under our bank credit facility. During 2013, our production increased 12% to 38.1Bcfe as a result of the Gulf of Mexico Acquisition as well as the success of our La Cantera prospect and our Oklahoma and Texas drilling programs. Partially offsetting these increases were decreases as a result of the sale of our non-operated Arkansas assets on December 31, 2012 as well as declining dry gas production in our Woodford Shale area. Our estimated proved reserves at December 31, 2013 increased 32% from 2012 as discussed in greater detail below.

#### Oil and Gas Reserves

Our estimated proved reserves at December 31, 2013 increased 32% from 2012 totaling 3.1 MMBbls of oil, 29.1 Bcfe of natural gas liquids (Ngls) and 254.2 Bcf of natural gas, with a pre-tax present value, discounted at 10%, of the estimated future net revenues based on average prices during 2013 ("PV-10") of \$475 million. The increase in our estimated proved reserves during 2013 was primarily the result of the Gulf of Mexico Acquisition and the effect of the increase in the historical 12-month average price per Mcf of natural gas used to calculate our estimated proved reserves, along with the success in our drilling programs. At December 31, 2013, our standardized measure of discounted cash flows, which includes the estimated impact of future income taxes, totaled \$454 million. See the reconciliation of PV-10 to the standardized measure of discounted cash flows below. Our PV-10 and standardized measure of discounted cash flows utilized prices (adjusted for field differentials) for the years ended December 31, 2013 and 2012 as follows:

	12/31/2013	12/31/2012
Oil per Bbl	\$106.19	\$102.81
Natural gas per Mcf	\$3.11	\$2.20
Ngl per Mcfe	\$5.10	\$6.07

Ryder Scott Company, L.P., a nationally recognized independent petroleum engineering firm, prepared the estimates of our proved reserves and future net cash flows (and present value thereof) attributable to such proved reserves at December 31,

2013. Our internal reservoir engineering staff is managed by an individual with 32 years of industry experience as a reservoir and production engineer, including eleven years as a reservoir engineering manager with PetroQuest. This individual is responsible for overseeing the estimates prepared by Ryder Scott.

The following table sets forth certain information about our estimated proved reserves as of December 31, 2013:

	Oil (MBbls)	NGL (Mmcfe)	Natural Gas (Mmcf)	Total Mmcfe*
Proved Developed	2,709	23,173	163,728	203,152
Proved Undeveloped	375	5,967	90,440	98,659
Total Proved	3,084	29,140	254,168	301,811

\* Oil conversion to Mcfe at one Bbl of crude oil, condensate or natural gas liquids to six Mcf of natural gas.

As of December 31, 2013, our proved undeveloped reserves ("PUD reserves") totaled 98.7 Bcfe, a 64% increase from our PUD reserves at December 31, 2012. This increase was due primarily to the effects of a 41% increase in the historical 12-month average natural gas price per Mcf used in estimating our reserves, which was \$3.11 per Mcf as of December 31, 2013 as compared to \$2.20 per Mcf as of December 31, 2012. During 2013, we spent \$3.8 million converting 4 Bcfe of PUD reserves at December 31, 2012 to proved developed reserves at December 31, 2013. PUD reserves added from extensions and discoveries were primarily the result of successful drilling in our Woodford Shale acreage in Oklahoma. Following is an analysis of the change in our PUD reserves as of December 31, 2013:

	MMcfe
PUD Reserve balance at December 31, 2012	59,993
PUD reserves converted to proved developed	(4,109)
PUD reserves added from revisions or extensions and discoveries	13,452
PUD reserves removed for 5 year rule	(4,279)
PUD reserves added due to improved gas prices	33,308
PUD reserves acquired	308
PUD reserves sold	(146)
PUD reserves revised	132
PUD Reserve balance at December 31, 2013	98,659

Approximately 76% of our PUD reserves at December 31, 2013 were associated with the future development of our Oklahoma properties. We expect all of our PUD reserves at December 31, 2013 to be developed over the next five years. At December 31, 2013, we had no PUD reserves that had been booked for longer than five years. Estimated future costs related to the development of PUD reserves are expected to total \$15.8 million in 2014, \$50.0 million in 2015, \$36.5 million in 2016, \$24.5 million in 2017 and \$9.6 million thereafter. However, because 92% of our PUD reserves at December 31, 2013 are comprised of natural gas, the specific timing of the development of PUD reserves over the next five years is highly dependent upon the prevailing price of natural gas.

The estimated cash flows from our proved reserves at December 31, 2013 were as follows:

	Prov	ed Developed (M\$)					Тс	Total Proved (M\$)	
Estimated pre-tax future net cash flows (1)	\$	635,348	\$	134,620	\$	769,968			
Discounted pre-tax future net cash flows (PV-10) (1)	\$	443,789	\$	31,029	\$	474,818			
Total standardized measure of discounted future net cash flows					\$	453,882			

(1) Estimated pre-tax future net cash flows and discounted pre-tax future net cash flows (PV-10) are non-GAAP measures because they exclude income tax effects. Management believes these non-GAAP measures are useful to investors as they are based on prices, costs and discount factors which are consistent from company to company, while the standardized measure of discounted future net cash flows is dependent on the unique tax situation of each individual company. As a result, the Company believes that investors can use these non-GAAP measures as a basis for comparison of the relative size and value of the Company's reserves to other companies. The Company also understands that securities analysts and

rating agencies use these non-GAAP measures in similar ways. The following table reconciles undiscounted and discounted future net cash flows to standardized measure of discounted cash flows as of December 31, 2013:

	Total	Proved (M\$)
Estimated pre-tax future net cash flows	\$	769,968
10% annual discount		(295,150)
Discounted pre-tax future net cash flows		474,818
Future income taxes discounted at 10%		(20,936)
Standardized Measure of discounted future net cash flows	\$	453,882

We have not filed any reports with other federal agencies that contain an estimate of total proved net oil and gas reserves.

#### **Core Areas**

The following table sets forth estimated proved reserves and annual production from each of our core areas (in Bcfe) for the years ended December 31, 2013 and 2012.

	20	13	2012		
	Reserves	Production	Reserves	Production	
Oklahoma Woodford	193.8	17.0	146.4	16.3	
E. Texas	48.1	6.0	46.7	6.4	
Gulf Coast Basin (1)	57.2	14.3	30.0	8.7	
Other (2)	2.7	0.8	5.2	2.6	
	301.8	38.1	228.3	34.0	

- (1) On July 3, 2013 we closed the Gulf of Mexico Acquisition which added 30.5 Bcfe of estimated proved reserves and 4.5 Bcfe of production for year end 2013.
- (2) On December 31, 2012 we sold our non-operated Arkansas assets which produced 2 Bcfe in 2012.

#### Oklahoma - Woodford

During 2013, we continued our evaluation of the Woodford Shale as we drilled and participated in 25 gross wells, achieving a 100% success rate. In total, we invested \$36.2 million during 2013 acquiring approximately 13,500 net acres prospective for liquids rich Woodford Shale gas and drilling and completing wells. In addition, during 2013 we utilized \$21.1 million of total drilling carry under the amended JDA and plan to continue utilizing the drilling carry during 2014. Average daily production from our Oklahoma properties during 2013 totaled 47 MMcfe per day, a 5% increase from 2012 average daily production. We added approximately 23 Bcfe of estimated proved reserves from our drilling program during the year. We also experienced positive revisions to our proved reserves as a result of higher average prices, which along with our drilling success resulted in a 32% increase in our estimated proved reserves. We have allocated approximately 50% of our 2014 capital budget to operations in the Woodford Shale as we expect to participate in the drilling of approximately 58 gross wells, all of which will target liquids rich gas, as well as obtain 3-D seismic data over acreage recently acquired to target liquids rich gas.

#### East Texas

During 2013, we invested \$11.3 million in our East Texas properties where we drilled one gross well, achieving a 100% success rate, plugged and abandoned several mature wells and acquired approximately 2,000 net acres. Net production from our East Texas assets averaged 16.3 MMcfe per day during 2013, a 6% decrease from 2012 average daily production and our estimated proved reserves increased 3% from 2012, primarily as a result of successful drilling in our Carthage field. We have allocated approximately 25% of our 2014 capital budget to drilling six gross wells as well as various plugging and abandonment operations at our Carthage field.

#### **Gulf Coast Basin**

During 2013, we drilled five gross wells in the Gulf Coast Basin, achieving a 40% success rate. In total, we invested \$232.9 million in this area including \$188.8 million for the Gulf of Mexico Acquisition. Production from this area increased 65% from 2012 totaling 39.1 MMcfe per day in 2013 due to the Gulf of Mexico Acquisition as well as the inception of production from our third well at our La Cantera prospect. Our estimated proved reserves in this area increased 91% from 2012 primarily as a result of the 30.5 Bcfe (net of current year production) added through the Gulf of Mexico Acquisition. We have allocated

approximately 25% of our 2014 capital budget to various drilling, re-completion and plugging and abandonment projects in the Gulf Coast Basin.

#### **Markets and Customers**

We sell our oil and natural gas production under fixed or floating market contracts. Customers purchase all of our oil and natural gas production at current market prices. The terms of the arrangements generally require customers to pay us within 30 days after the production month ends. As a result, if the customers were to default on their payment obligations to us, near-term earnings and cash flows would be adversely affected. However, due to the availability of other markets and pipeline connections, we do not believe that the loss of these customers or any other single customer would adversely affect our ability to market production. Our ability to market oil and natural gas from our wells depends upon numerous factors beyond our control, including:

- the extent of domestic production and imports of oil and natural gas;
- the proximity of the natural gas production to pipelines;
- the availability of capacity in such pipelines;
- the demand for oil and natural gas by utilities and other end users;
- the availability of alternative fuel sources;
- the effects of inclement weather;
- state and federal regulation of oil and natural gas production; and
- federal regulation of gas sold or transported in interstate commerce.

We cannot assure you that we will be able to market all of the oil or natural gas we produce or that favorable prices can be obtained for the oil and natural gas we produce.

In view of the many uncertainties affecting the supply and demand for oil, natural gas and refined petroleum products, we are unable to predict future oil and natural gas prices and demand or the overall effect such prices and demand will have on the Company. During 2013, one customer accounted for 35% and two accounted for 14% each of our oil and natural gas revenue. During 2012, one customer accounted for 30%, one accounted for 17% and one accounted for 12% of our oil and natural gas revenue. During 2011, one customer accounted for 20%, one accounted for 18%, one accounted for 15% and one accounted for 11% of our oil and natural gas revenue. These percentages do not consider the effects of commodity hedges. We do not believe that the loss of any of our oil or natural gas purchasers would have a material adverse effect on our operations due to the availability of other purchasers.

#### **Production, Pricing and Production Cost Data**

The following table sets forth our production, pricing and production cost data during the periods indicated. Three of our core areas, the Gulf Coast Basin, East Texas and Oklahoma, which includes primarily Woodford Shale reserves, represented greater than 15% of our total estimated proved reserves.

Production:         2013         2012         2011           Oil (Bbls):         STACK (Coats Basin)         512,041         346,513         425,145           East Texas         82,000         87,368         96,923           Oklahoma-Woodford         971         171         1445           Other         85,468         86,538         49,883           Total Oil (Bbls)         680,980         520,390         572,096           Gas (Mcf):         150,056,01         15,349,219         2,874,682           Gulf Coast Basin         9,876,771         5,901,109         6,342,688           East Texas         41,23,416         4,360,290         2,871,682           Okher         170,055         2,065,610         2,212,389           Total Gas (Mcf)         29,225,843         274,66228         246,693           NGI. - (1) Does not include the effect of hedges.
- (2) Production costs do not include production taxes.

#### Oil and Gas Producing Wells

The following table details the productive wells in which we owned an interest as of December 31, 2013:

	Gross	Net	
Productive Wells:			
Oil:			
Gulf Coast Basin	23	12.09	
East Texas	4	3.32	
Oklahoma - Woodford	1	0.03	
Other	27	9.34	
	55	24.78	
Gas:		-	
Gulf Coast Basin	24	11.80	
East Texas	98	65.12	
Oklahoma - Woodford	584	166.45	
Other			
	706	243.37	
Total	761	268.15	

Of the 761 gross productive wells at December 31, 2013, two had dual completions.

#### Oil and Gas Drilling Activity

The following table sets forth the wells drilled and completed by us during the periods indicated. All wells were drilled in the continental United States.

	2013	2013		2012		2011	
	Gross	Net	Gross	Net	Gross	Net	
Exploration:							
Productive:							
Gulf Coast Basin	1	0.94	2	0.74	5	2.28	
East Texas	1	0.99	6	3.25	4	1.34	
Oklahoma - Woodford	22	5.66	30	7.15	35	9.95	
Other	7	2.11	46	4.73	50	4.58	
	31	9.70	84	15.87	94	18.15	
Non-productive:		_					
Gulf Coast Basin	3	0.62	_	_	_		
East Texas	_	_	_	_	1	0.50	
Oklahoma - Woodford	_	_	1	0.34	_	_	
Other	2	0.62	1	0.50	_	_	
	5	1.24	2	0.84	1	0.50	
Total	36	10.94	86	16.71	95	18.65	
Development:							
Productive:							
Gulf Coast Basin	1	0.24	_	_	_	_	
East Texas	<u> </u>	_		_	2	0.60	
Oklahoma - Woodford	3	1.36	15	4.78	1	0.05	
Other	<u> </u>	_	6	0.10	20	0.68	
	4	1.60	21	4.88	23	1.33	
Non-productive:							
Gulf Coast Basin	_	_	_	_	_	_	
East Texas	_	_	_	_	_	_	
Oklahoma - Woodford	_	_	_	_	_		
Other	_	_	_	_	_	_	
		_	_	_	_	_	
Total	4	1.60	21	4.88	23	1.33	

At December 31, 2013, we had 19 gross (14.26 net) wells in progress in Oklahoma, Texas and the Gulf Coast Basin.

#### Leasehold Acreage

The following table shows our approximate developed and undeveloped (gross and net) leasehold acreage as of December 31, 2013:

	Leasehold Acreage				
	Developed		Undeve	loped	
	Gross	Net	Gross	Net	
Kansas	_		4,091	2,046	
Louisiana	4,954	1,614	11,653	6,593	
Mississippi	721	721	_		
Oklahoma	102,344	48,463	89,039	58,705	
Texas	47,224	24,865	9,607	4,658	
Federal Waters	50,657	31,470	7,124	7,124	
Total	205,900	107,133	121,514	79,126	

Leases covering 17% of our net undeveloped acreage are scheduled to expire in 2014, 19% in 2015, 27% in 2016 and 37% thereafter. Of the acreage subject to leases scheduled to expire during 2014, 65% relates to undeveloped acreage in the Mississippian Lime trend where we are evaluating future development plans after a full review of seismic data. We expect to hold the majority of the acreage scheduled to expire in 2014 through drilling or lease extensions.

#### **Title to Properties**

We believe that the title to our oil and gas properties is good and defensible in accordance with standards generally accepted in the oil and gas industry, subject to such exceptions which, in our opinion, are not so material as to detract substantially from the use or value of such properties. Our properties are typically subject, in one degree or another, to one or more of the following:

- · royalties and other burdens and obligations, express or implied, under oil and gas leases;
- overriding royalties and other burdens created by us or our predecessors in title;
- a variety of contractual obligations (including, in some cases, development obligations) arising under operating
  agreements, farmout agreements, production sales contracts and other agreements that may affect the properties or their
  titles;
- back-ins and reversionary interests existing under purchase agreements and leasehold assignments;
- liens that arise in the normal course of operations, such as those for unpaid taxes, statutory liens securing obligations to unpaid suppliers and contractors and contractual liens under operating agreements; pooling, unitization and communitization agreements, declarations and orders; and
- easements, restrictions, rights-of-way and other matters that commonly affect property.

To the extent that such burdens and obligations affect our rights to production revenues, they have been taken into account in calculating our net revenue interests and in estimating the size and value of our reserves. We believe that the burdens and obligations affecting our properties are conventional in the industry for properties of the kind that we own.

#### **Federal Regulations**

Sales and Transportation of Natural Gas. Historically, the transportation and sales for resale of natural gas in interstate commerce have been regulated pursuant to the Natural Gas Act of 1938 ("NGA"), the Natural Gas Policy Act of 1978 and the Federal Energy Regulatory Commission ("FERC") regulations. Effective January 1, 1993, the Natural Gas Wellhead Decontrol Act deregulated the price for all "first sales" of natural gas. Thus, all of our sales of gas may be made at market prices, subject to applicable contract provisions. Sales of natural gas are affected by the availability, terms and cost of pipeline transportation. Since 1985, the FERC has implemented regulations intended to make natural gas transportation more accessible to gas buyers and sellers on an open-access, non-discriminatory basis. We cannot predict what further action the FERC will take on these matters. Some of the FERC's more recent proposals may, however, adversely affect the availability and reliability of interruptible transportation service on interstate pipelines. We do not believe that we will be affected by any action taken materially differently than other natural gas producers, gatherers and marketers with which we compete.

The Outer Continental Shelf Lands Act (the "OCSLA"), which was administered by the Bureau of Ocean Energy Management, Regulation and Enforcement (the "BOEMRE") and, after October 1, 2011, its successors, the Bureau of Ocean Energy Management (the "BOEM") the Bureau of Safety and Environmental Enforcement (the "BSEE"), and the FERC, requires that all pipelines operating on or across the shelf provide open-access, non-discriminatory service. There are currently no regulations implemented by the FERC under its OCSLA authority on gatherers and other entities outside the reach of its NGA jurisdiction. Therefore, we do not believe that any FERC, BOEM or BSEE action taken under OCSLA will affect us in a way that materially differs from the way it affects other natural gas producers, gatherers and marketers with which we compete.

Our natural gas sales are generally made at the prevailing market price at the time of sale. Therefore, even though we sell significant volumes to major purchasers, we believe that other purchasers would be willing to buy our natural gas at comparable market prices.

Natural gas continues to supply a significant portion of North America's energy needs and we believe the importance of natural gas in meeting this energy need will continue. The impact of the ongoing economic downturn on natural gas supply and demand fundamentals has resulted in extremely volatile natural gas prices, which is expected to continue.

On August 8, 2005, the Energy Policy Act of 2005 (the "2005 EPA") was signed into law. This comprehensive act contains many provisions that will encourage oil and gas exploration and development in the U.S. The 2005 EPA directs the FERC, BOEM and other federal agencies to issue regulations that will further the goals set out in the 2005 EPA. The 2005 EPA amends the NGA to make it unlawful for "any entity", including otherwise non-jurisdictional producers such as us, to use any deceptive or manipulative device or contrivance in connection with the purchase or sale of natural gas or the purchase or sale of transportation services subject to regulation by the FERC, in contravention of rules prescribed by the FERC. On January 20, 2006, the FERC issued rules implementing this provision. The rules make it unlawful in connection with the purchase or sale of natural gas subject to the jurisdiction of the FERC, or the purchase or sale of transportation services subject to the jurisdiction of the FERC, for any entity, directly or indirectly, to use or employ any device, scheme or artifice to defraud; to make any untrue statement of material fact or omit to make any such statement necessary to make the statements made not misleading; or to engage in any act or practice that operates as a fraud or deceit upon any person. The new anti-manipulation rule does not apply to activities that relate only to intrastate or other non-jurisdictional sales or gathering, but does apply to activities of otherwise non-jurisdictional entities to the extent the activities are conducted "in connection with" gas sales, purchases or transportation subject to FERC jurisdiction. It therefore reflects a significant expansion of the FERC's enforcement authority. To date, we do not believe we have been, nor do we anticipate we will be affected any differently than other producers of natural gas.

In 2007, the FERC issued a final rule on annual natural gas transaction reporting requirements, as amended by subsequent orders on rehearing ("Order 704"). Under Order 704, wholesale buyers and sellers of more than 2.2 million MMBtu of physical natural gas in the previous calendar year, including interstate and intrastate natural gas pipelines, natural gas gatherers, natural gas processors and natural gas marketers are now required to report, on May 1 of each year, beginning in 2009, aggregate volumes of natural gas purchased or sold at wholesale in the prior calendar year to the extent such transactions utilize, contribute to, or may contribute to the formation of price indices. It is the responsibility of the reporting entity to determine which individual transactions should be reported based on the guidance of Order 704. The monitoring and reporting required by these rules have increased our administrative costs. To date, we do not believe we have been, nor do we anticipate that we will be affected any differently than other producers of natural gas.

Sales and Transportation of Crude Oil. Our sales of crude oil, condensate and natural gas liquids are not currently regulated, and are subject to applicable contract provisions made at market prices. In a number of instances, however, the ability to transport and sell such products is dependent on pipelines whose rates, terms and conditions of service are subject to the FERC's jurisdiction under the Interstate Commerce Act. In other instances, the ability to transport and sell such products is dependent on pipelines whose rates, terms and conditions of service are subject to regulation by state regulatory bodies under state statutes.

The regulation of pipelines that transport crude oil, condensate and natural gas liquids is generally more light-handed than the FERC's regulation of gas pipelines under the NGA. Regulated pipelines that transport crude oil, condensate, and natural gas liquids are subject to common carrier obligations that generally ensure non-discriminatory access. With respect to interstate pipeline transportation subject to regulation of the FERC under the Interstate Commerce Act, rates generally must be cost-based, although market-based rates or negotiated settlement rates are permitted in certain circumstances. Pursuant to FERC Order No. 561, pipeline rates are subject to an indexing methodology. Under this indexing methodology, pipeline rates are subject to changes in the Producer Price Index for Finished Goods, minus one percent. A pipeline can seek to increase its rates above index levels provided that the pipeline can establish that there is a substantial divergence between the actual costs experienced by the pipeline and the rate resulting from application of the index. A pipeline can seek to charge market based rates if it establishes that it lacks significant market power. In addition, a pipeline can establish rates pursuant to settlement if agreed upon by all current shippers. A pipeline can seek to establish initial rates for new services through a cost-of-service proceeding, a market-based rate proceeding, or through an agreement between the pipeline and at least one shipper not affiliated with the pipeline.

**Federal Leases.** We maintain operations located on federal oil and natural gas leases, which are administered by the BOEM or the BSEE, pursuant to the OCSLA. The BOEM and the BSEE regulate offshore operations, including engineering and construction specifications for production facilities, safety procedures, plugging and abandonment of wells on the Gulf of Mexico shelf, and removal of facilities.

The BOEM handles offshore leasing, resource evaluation, review and administration of oil and gas exploration and development plans, renewable energy development, NEPA analysis and environmental studies, and the BSEE is responsible for the safety and enforcement functions of offshore oil and gas operations, including the development and enforcement of safety and environmental regulations, permitting of offshore exploration, development and production activities, inspections, offshore regulatory programs, oil spill response and newly formed training and environmental compliance programs. Our federal oil and natural gas leases are awarded based on competitive bidding and contain relatively standardized terms. These leases require compliance with detailed regulations and orders that are subject to interpretation and change by the BOEM or BSEE. We are currently subject to regulations governing the plugging and abandonment of wells located offshore and the installation and removal of all production facilities, structures and pipelines, and the BOEM or the BSEE may in the future amend these regulations. Please read "Risk Factors" beginning on page 19 for more information on new regulations.

To cover the various obligations of lessees on the Outer Continental Shelf (the "OCS"), the BOEM and the BSEE generally require that lessees have substantial net worth or post bonds or other acceptable assurances that such obligations will be satisfied. While we have been exempt from such supplemental bonding requirements in the past, the BOEM has recently notified us that beginning in 2014 we will need to post supplemental bonding or some form of collateral for certain of our offshore properties. We are currently evaluating the cost of compliance with these supplemental bonding requirements and the potential collateral that would be required to be provided. We believe that we will be able to satisfy the collateral requirements using a combination of our existing cash on hand and letters of credit available under our bank credit facility. Our borrowings available under our bank credit facility will be reduced to the extent we issue letters of credit to support the issuance of these bonds or other surety. The cost of compliance with these supplemental bonding requirements is not expected to be material. Under some circumstances, the BOEM may require any of our operations on federal leases to be suspended or terminated. Any such suspension or termination could materially adversely affect our financial condition and results of operations.

Hurricanes in the Gulf of Mexico can have a significant impact on oil and gas operations on the OCS. The effects from past hurricanes have included structural damage to pipelines, wells, fixed production facilities, semi-submersibles and jack-up drilling rigs. The BOEM and the BSEE will continue to be concerned about the loss of these facilities and rigs as well as the potential for catastrophic damage to key infrastructure and the resultant pollution from future storms. In an effort to reduce the potential for future damage, the BOEMRE historically issued guidance aimed at improving platform survivability by taking into account environmental and oceanic conditions in the design of platforms and related structures. It is possible that similar, if not more stringent, requirements will be issued by the BOEM or the BSEE for future hurricane seasons. New requirements, if any, could increase our operating costs to future storms.

The Office of Natural Resources Revenue (the "ONRR") in the U.S. Department of the Interior administers the collection of royalties under the terms of the OCSLA and the oil and natural gas leases issued thereunder. The amount of royalties due is based upon the terms of the oil and natural gas leases as well as the regulations promulgated by the ONRR.

**Federal, State or American Indian Leases.** In the event we conduct operations on federal, state or American Indian oil and gas leases, such operations must comply with numerous regulatory restrictions, including various nondiscrimination statutes, and certain of such operations must be conducted pursuant to certain on-site security regulations and other appropriate permits issued by the Bureau of Land Management ("BLM") or the BOEM or other appropriate federal or state agencies.

The Mineral Leasing Act of 1920 ("Mineral Act") prohibits direct or indirect ownership of any interest in federal onshore oil and gas leases by a foreign citizen of a country that denies "similar or like privileges" to citizens of the United States. Such restrictions on citizens of a "non-reciprocal" country include ownership or holding or controlling stock in a corporation that holds a federal onshore oil and gas lease. If this restriction is violated, the corporation's lease can be cancelled in a proceeding instituted by the United States Attorney General. Although the regulations of the BLM (which administers the Mineral Act) provide for agency designations of non-reciprocal countries, there are presently no such designations in effect. We own interests in numerous federal onshore oil and gas leases. It is possible that holders of our equity interests may be citizens of foreign countries, which at some time in the future might be determined to be non-reciprocal under the Mineral Act.

#### **State Regulations**

Most states regulate the production and sale of oil and natural gas, including:

- requirements for obtaining drilling permits;
- the method of developing new fields;
- the spacing and operation of wells;
- the prevention of waste of oil and gas resources; and
- the plugging and abandonment of wells.

The rate of production may be regulated and the maximum daily production allowable from both oil and gas wells may be established on a market demand or conservation basis or both.

We may enter into agreements relating to the construction or operation of a pipeline system for the transportation of natural gas. To the extent that such gas is produced, transported and consumed wholly within one state, such operations may, in certain instances, be subject to the jurisdiction of such state's administrative authority charged with the responsibility of regulating intrastate pipelines. In such event, the rates that we could charge for gas, the transportation of gas, and the construction and

operation of such pipeline would be subject to the rules and regulations governing such matters, if any, of such administrative authority.

#### **Legislative Proposals**

In the past, Congress has been very active in the area of natural gas regulation. New legislative proposals in Congress and the various state legislatures, if enacted, could significantly affect the petroleum industry. At the present time it is impossible to predict what proposals, if any, might actually be enacted by Congress or the various state legislatures and what effect, if any, such proposals might have on our operations.

#### **Environmental Regulations**

General. Our activities are subject to existing federal, state and local laws and regulations governing environmental quality and pollution control. Although no assurances can be made, we believe that, absent the occurrence of an extraordinary event, compliance with existing federal, state and local laws, regulations and rules regulating the release of materials into the environment or otherwise relating to the protection of human health, safety and the environment will not have a material effect upon our capital expenditures, earnings or competitive position with respect to our existing assets and operations. We cannot predict what effect additional regulation or legislation, enforcement policies, and claims for damages to property, employees, other persons and the environment resulting from our operations could have on our activities.

Our activities with respect to exploration and production of oil and natural gas, including the drilling of wells and the operation and construction of pipelines, plants and other facilities for extracting, transporting, processing, treating or storing natural gas and other petroleum products, are subject to stringent environmental regulation by state and federal authorities, including the United States Environmental Protection Agency (the "USEPA"). Such regulation can increase the cost of planning, designing, installing and operating of such facilities. Although we believe that compliance with environmental regulations will not have a material adverse effect on us, risks of substantial costs and liabilities are inherent in oil and gas production operations, and there can be no assurance that significant costs and liabilities will not be incurred. Moreover it is possible that other developments, such as spills or other unanticipated releases, stricter environmental laws and regulations, and claims for damages to property or persons resulting from oil and gas production, would result in substantial costs and liabilities to us.

**Solid and Hazardous Waste.** We own or lease numerous properties that have been used for production of oil and gas for many years. Although we have utilized operating and disposal practices standard in the industry at the time, hydrocarbons or other solid wastes may have been disposed or released on or under these properties. In addition, many of these properties have been operated by third parties that controlled the treatment of hydrocarbons or other solid wastes and the manner in which such substances may have been disposed or released. State and federal laws applicable to oil and gas wastes and properties have gradually become stricter over time. Under these laws, we could be required to remove or remediate previously disposed wastes (including wastes disposed or released by prior owners or operators) or property contamination (including groundwater contamination by prior owners or operators) or to perform remedial plugging operations to prevent future contamination.

We generate wastes, including hazardous wastes, which are subject to regulation under the federal Resource Conservation and Recovery Act ("RCRA") and state statutes. The USEPA has limited the disposal options for certain hazardous wastes. Furthermore, it is possible that certain wastes generated by our oil and gas operations which are currently exempt from regulation as "hazardous wastes" may in the future be designated as "hazardous wastes" under RCRA or other applicable statutes, and therefore be subject to more rigorous and costly disposal requirements.

Naturally Occurring Radioactive Materials ("NORM") are radioactive materials which precipitate on production equipment or area soils during oil and natural gas extraction or processing. NORM wastes are regulated under the RCRA framework, although such wastes may qualify for the oil and gas hazardous waste exclusion. Primary responsibility for NORM regulation has been a state function. Standards have been developed for worker protection; treatment, storage and disposal of NORM waste; management of waste piles, containers and tanks; and limitations upon the release of NORM-contaminated land for unrestricted use. We believe that our operations are in material compliance with all applicable NORM standards.

**Superfund.** The Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"), also known as the "Superfund" law, imposes liability, without regard to fault or the legality of the original conduct, on certain persons with respect to the release or threatened release of a "hazardous substance" into the environment. These persons include the owner and operator of a site and persons that disposed or arranged for the disposal of hazardous substances at a site. CERCLA also authorizes the USEPA and, in some cases, third parties to take actions in response to threats to the public health or the environment and to seek to recover from the responsible persons the costs of such action. State statutes impose similar liability.

Under CERCLA, the term "hazardous substance" does not include "petroleum, including crude oil or any fraction thereof," unless specifically listed or designated and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel. While this "petroleum exclusion" lessens the significance of CERCLA to our operations, we may

generate waste that may fall within CERCLA's definition of a "hazardous substance" in the course of our ordinary operations. We also currently own or lease properties that for many years have been used for the exploration and production of oil and natural gas. Although we and, to our knowledge, our predecessors have used operating and disposal practices that were standard in the industry at the time, "hazardous substances" may have been disposed or released on, under or from the properties owned or leased by us or on, under or from other locations where these wastes have been taken for disposal. At this time, we do not believe that we have any liability associated with any Superfund site, and we have not been notified of any claim, liability or damages under CERCLA.

**Endangered Species Act.** Federal and state legislation including, in particular, the federal Endangered Species Act of 1973 ("ESA"), imposes requirements to protect imperiled species from extinction by conserving and protecting threatened and endangered species and the habitat upon which they depend. With specified exceptions, the ESA prohibits the "taking," including killing, harassing or harming, of any listed threatened or endangered species, as well as any degradation or destruction of its habitat. In addition, the ESA mandates that federal agencies carry out programs for conservation of listed species. Many state laws similarly protect threatened and endangered species and their habitat. We operate in areas in which listed species may be present. For example, the American Burying Beetle, listed in 1989 as endangered, is present in regions overlying the Woodford shale in Oklahoma. As a result, we may be required to adopt protective measures, obtain incidental take permits, and otherwise adjust our drilling plans to comply with ESA requirements.

Oil Pollution Act. The Oil Pollution Act of 1990 (the "OPA") and regulations thereunder impose a variety of regulations on "responsible parties" related to the prevention of oil spills and liability for damages resulting from such spills in United States waters. A "responsible party" includes the owner or operator of a facility or vessel, or the lessee or permittee of the area in which an offshore facility is located. The OPA assigns liability to each responsible party for oil removal costs and a variety of public and private damages. While liability limits apply in some circumstances, a party cannot take advantage of liability limits if the spill was caused by gross negligence or willful misconduct or resulted from violation of a federal safety, construction or operating regulation. If the party fails to report a spill or to cooperate fully in the cleanup, liability limits likewise do not apply. Few defenses exist to the liability imposed by the OPA.

The OPA establishes a liability limit for onshore facilities of \$350 million and for offshore facilities of all removal costs plus \$75 million, and lesser limits for some vessels depending upon their size. The regulations promulgated under OPA impose proof of financial responsibility requirements that can be satisfied through insurance, guarantee, indemnity, surety bond, letter of credit, qualification as a self-insurer, or a combination thereof. The amount of financial responsibility required depends upon a variety of factors including the type of facility or vessel, its size, storage capacity, oil throughput, proximity to sensitive areas, type of oil handled, history of discharges and other factors. We carry insurance coverage to meet these obligations, which we believe is customary for comparable companies in our industry. A failure to comply with OPA's requirements or inadequate cooperation during a spill response action may subject a responsible party to civil or criminal enforcement actions.

As a result of the explosion and sinking of the Deepwater Horizon drilling rig in the Gulf of Mexico in 2010, Congress considered but did not enact legislation that would eliminate the current cap on liability for damages and increase minimum levels of financial responsibility under OPA. If enacted, such legislation could increase our obligations and potential liability, but adoption of such legislation is uncertain. We are not aware of the occurrence of any action or event that would subject us to liability under OPA, and we believe that compliance with OPA's financial responsibility and other operating requirements will not have a material adverse effect on us.

**Discharges.** The Clean Water Act ("CWA") regulates the discharge of pollutants to waters of the United States, including wetlands, and requires a permit for the discharge of pollutants, including petroleum, to such waters. Certain facilities that store or otherwise handle oil are required to prepare and implement Spill Prevention, Control and Countermeasure Plans and Facility Response Plans relating to the possible discharge of oil to surface waters. We are required to prepare and comply with such plans and to obtain and comply with discharge permits. We believe we are in substantial compliance with these requirements and that any noncompliance would not have a material adverse effect on us. The CWA also prohibits spills of oil and hazardous substances to waters of the United States in excess of levels set by regulations and imposes liability in the event of a spill. State laws further provide civil and criminal penalties and liabilities for spills to both surface and groundwaters and require permits that set limits on discharges to such waters.

**Hydraulic Fracturing.** Our exploration and production activities may involve the use of hydraulic fracturing techniques to stimulate wells and maximize natural gas production. Citing concerns over the potential for hydraulic fracturing to impact drinking water, human health and the environment, and in response to a Congressional directive, the USEPA has commissioned a study to identify potential risks associated with hydraulic fracturing. The USEPA published a progress report on this study in December 2012 and a final draft report will be delivered in 2014. Additionally, in May 2012 the BLM proposed to regulate the use of hydraulic fracturing on federal and tribal lands, but following extensive public comment on the proposal, issued a revised proposal in May 2013. The revised proposal, which also addresses disclosure of fluids used in the hydraulic fracturing process,

integrity of well construction, and the management and disposal of wastewater that flows back from the drilling process, has also generated substantial public comment and no final rule has yet been promulgated. Some states now regulate utilization of hydraulic fracturing and others are in the process of developing, or are considering development of, such rules. Depending on the results of the USEPA study and other developments related to the impact of hydraulic fracturing, our drilling activities could be subjected to new or enhanced federal, state and/or local regulatory requirements governing hydraulic fracturing.

Air Emissions. Our operations are subject to local, state and federal regulations for the control of emissions from sources of air pollution. Administrative enforcement actions for failure to comply strictly with air regulations or permits may be resolved by payment of monetary fines and correction of any identified deficiencies. Alternatively, regulatory agencies could impose civil and criminal liability for non-compliance. An agency could require us to forego construction or operation of certain air emission sources. We believe that we are in substantial compliance with air pollution control requirements and that, if a particular permit application were denied, we would have enough permitted or permittable capacity to continue our operations without a material adverse effect on any particular producing field.

According to certain scientific studies, emissions of carbon dioxide, methane, nitrous oxide and other gases commonly known as greenhouse gases ("GHG") may be contributing to global warming of the earth's atmosphere and to global climate change. In response to the scientific studies, legislative and regulatory initiatives have been underway to limit GHG emissions. The U.S. Supreme Court determined that GHG emissions fall within the federal Clean Air Act ("CAA") definition of an "air pollutant", and in response the USEPA promulgated an endangerment finding paving the way for regulation of GHG emissions under the CAA. The USEPA has also promulgated rules requiring large sources to report their GHG emissions. Sources subject to these reporting requirements include on- and offshore petroleum and natural gas production and onshore natural gas processing and distribution facilities that emit 25,000 metric tons or more of carbon dioxide equivalent per year in aggregate emissions from all site sources. We are not subject to GHG reporting requirements. In addition, the USEPA promulgated rules that significantly increase the GHG emission threshold that would identify major stationary sources of GHG subject to CAA permitting programs. As currently written and based on current Company operations, we are not subject to federal GHG permitting requirements. Regulation of GHG emissions is new and highly controversial, and further regulatory, legislative and judicial developments are likely to occur. Such developments may affect how these GHG initiatives will impact the Company. Due to the uncertainties surrounding the regulation of and other risks associated with GHG emissions, the Company cannot predict the financial impact of related developments on the Company.

The USEPA has promulgated rules to limit air emissions from many hydraulically fractured natural gas wells. The new regulations will require use of equipment to capture gases that come from the well during the drilling process (so-called green completions) after January 1, 2015. Other new requirements mandate tighter standards for emissions associated with gas production, storage and transport. While these new requirements are expected to increase the cost of natural gas production, we do not anticipate that we will be affected any differently than other producers of natural gas.

**Coastal Coordination.** There are various federal and state programs that regulate the conservation and development of coastal resources. The federal Coastal Zone Management Act ("CZMA") was passed to preserve and, where possible, restore the natural resources of the Nation's coastal zone. The CZMA provides for federal grants for state management programs that regulate land use, water use and coastal development.

The Louisiana Coastal Zone Management Program ("LCZMP") was established to protect, develop and, where feasible, restore and enhance coastal resources of the state. Under the LCZMP, coastal use permits are required for certain activities, even if the activity only partially infringes on the coastal zone. Among other things, projects involving use of state lands and water bottoms, dredge or fill activities that intersect with more than one body of water, mineral activities, including the exploration and production of oil and gas, and pipelines for the gathering, transportation or transmission of oil, gas and other minerals require such permits. General permits, which entail a reduced administrative burden, are available for a number of routine oil and gas activities. The LCZMP and its requirement to obtain coastal use permits may result in additional permitting requirements and associated project schedule constraints.

The Texas Coastal Coordination Act ("CCA") provides for coordination among local and state authorities to protect coastal resources through regulating land use, water, and coastal development and establishes the Texas Coastal Management Program that applies in the nineteen counties that border the Gulf of Mexico and its tidal bays. The CCA provides for the review of state and federal agency rules and agency actions for consistency with the goals and policies of the Coastal Management Plan. This review may affect agency permitting and may add a further regulatory layer to some of our projects.

**OSHA.** We are subject to the requirements of the federal Occupational Safety and Health Act ("OSHA") and comparable state statutes. The OSHA hazard communication standard, the EPA community right-to-know regulations under Title III of the federal Superfund Amendments and Reauthorization Act, and similar state statutes require us to organize and/or disclose information about hazardous materials used or produced in our operations. Certain of this information must be provided to employees, state and local governmental authorities and local citizens.

Management believes that we are in substantial compliance with current applicable environmental laws and regulations described above and that continued compliance with existing requirements will not have a material adverse impact on us.

#### **Corporate Offices**

Our headquarters are located in Lafayette, Louisiana, in approximately 49,200 square feet of leased space, with exploration offices in The Woodlands, Texas and Tulsa, Oklahoma, in approximately 13,100 square feet and 11,800 square feet, respectively, of leased space. We also maintain owned or leased field offices in the areas of the major fields in which we operate properties or have a significant interest. Replacement of any of our leased offices would not result in material expenditures by us as alternative locations to our leased space are anticipated to be readily available.

#### **Employees**

We had 126 full-time employees as of February 5, 2014. In addition to our full time employees, we utilize the services of independent contractors to perform certain functions. We believe that our relationships with our employees are satisfactory. None of our employees are covered by a collective bargaining agreement.

#### **Available Information**

We make available free of charge, or through the "Investors—SEC Documents" section of our website at www.petroquest.com, access to our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act as soon as reasonably practicable after such material is filed or furnished to the Securities and Exchange Commission. Our Code of Business Conduct and Ethics, our Corporate Governance Guidelines and the charters of our Audit, Compensation and Nominating and Corporate Governance Committees are also available through the "Investors—Corporate Governance" section of our website or in print to any stockholder who requests them.

#### Item 1A. Risk Factors

#### Risks Related to Our Business, Industry and Strategy

Oil and natural gas prices are volatile, and an extended decline in the prices of oil and natural gas would likely have a material adverse effect on our financial condition, liquidity, ability to meet our financial obligations and results of operations.

Our future financial condition, revenues, results of operations, profitability and future growth, and the carrying value of our oil and natural gas properties depend primarily on the prices we receive for our oil and natural gas production. Our ability to maintain or increase our borrowing capacity and to obtain additional capital on attractive terms also substantially depends upon oil and natural gas prices. Historically, the markets for oil and natural gas have been volatile. For example, for the four years ended December 31, 2013, the NYMEX-WTI oil price ranged from a high of \$113.93 per Bbl to a low of \$68.01 per Bbl, while the NYMEX-Henry Hub natural gas price ranged from a high of \$6.01 per MMBtu to a low of \$1.91 per MMBtu. These markets will likely continue to be volatile in the future. The prices we will receive for our production, and the levels of our production, will depend on numerous factors beyond our control.

#### These factors include:

- relatively minor changes in the supply of or the demand for oil and natural gas;
- the condition of the United States and worldwide economies;
- market uncertainty;
- the level of consumer product demand;
- weather conditions in the United States, such as hurricanes;
- the actions of the Organization of Petroleum Exporting Countries;
- domestic and foreign governmental regulation and taxes, including price controls adopted by the FERC;
- political conditions or hostilities in oil and natural gas producing regions, including the Middle East and South America;

- the price and level of foreign imports of oil and natural gas; and
- the price and availability of alternate fuel sources.

We cannot predict future oil and natural gas prices and such prices may decline. An extended decline in oil and natural gas prices may adversely affect our financial condition, liquidity, ability to meet our financial obligations and results of operations. Lower prices have reduced and may further reduce the amount of oil and natural gas that we can produce economically and has required and may require us to record additional ceiling test write-downs and may cause our estimated proved reserves at December 31, 2014 to decline compared to our estimated proved reserves at December 31, 2013. Substantially all of our oil and natural gas sales are made in the spot market or pursuant to contracts based on spot market prices. Our sales are not made pursuant to long-term fixed price contracts.

To attempt to reduce our price risk, we periodically enter into hedging transactions with respect to a portion of our expected future production. We cannot assure you that such transactions will reduce the risk or minimize the effect of any decline in oil or natural gas prices. Any substantial or extended decline in the prices of or demand for oil or natural gas would have a material adverse effect on our financial condition, liquidity, ability to meet our financial obligations and results of operations.

Our outstanding indebtedness may adversely affect our cash flow and our ability to operate our business, which in turn may limit our ability to remain in compliance with debt covenants and make payments on our debt.

The aggregate principal amount of our outstanding indebtedness net of cash on hand as of December 31, 2013 was \$416 million. We have \$75 million of additional availability under our bank credit facility, subject, however, to limitations on incurrence of indebtedness under the indenture governing our 10% senior notes. In addition, we may also incur additional indebtedness in the future. Specifically, our high level of debt could have important consequences for you, including the following:

- it may be more difficult for us to satisfy our obligations with respect to our outstanding indebtedness, including our 10% senior notes, and any failure to comply with the obligations of any of our debt agreements, including financial and other restrictive covenants, could result in an event of default under the agreements governing such indebtedness;
- the covenants contained in our debt agreements limit our ability to borrow money in the future for acquisitions, capital expenditures or to meet our operating expenses or other general corporate obligations and may limit our flexibility in operating our business;
- we will need to use a substantial portion of our cash flows to pay interest on our debt, approximately \$35 million per year for interest on our 10% senior notes alone, and to pay quarterly dividends, if declared by our Board of Directors, on our 6.875% Series B Cumulative Convertible Perpetual Preferred Stock (the "Series B Preferred Stock") of approximately \$5.1 million per year, which will reduce the amount of money we have for operations, capital expenditures, expansion, acquisitions or general corporate or other business activities;
- the amount of our interest expense may increase because certain of our borrowings in the future may be at variable rates of interest, which, if interest rates increase, could result in higher interest expense;
- we may have a higher level of debt than some of our competitors, which may put us at a competitive disadvantage;
- we may be more vulnerable to economic downturns and adverse developments in our industry or the economy in general, especially extended or further declines in oil and natural gas prices; and
- our debt level could limit our flexibility in planning for, or reacting to, changes in our business and the industry in which we operate.

Our ability to meet our expenses and debt obligations will depend on our future performance, which will be affected by financial, business, economic, regulatory and other factors. We will not be able to control many of these factors, such as economic conditions and governmental regulation. We cannot be certain that our cash flow from operations will be sufficient to allow us to pay the principal and interest on our debt, including our 10% senior notes, and meet our other obligations. If we do not have enough cash to service our debt, we may be required to refinance all or part of our existing debt, including our 10% senior notes, sell assets, borrow more money or raise equity. We may not be able to refinance our debt, sell assets, borrow more money or raise equity on terms acceptable to us, if at all.

To service our indebtedness, we will require a significant amount of cash. Our ability to generate cash depends on many factors beyond our control, and any failure to meet our debt obligations could harm our business, financial condition and results of operations.

Our ability to make payments on and to refinance our indebtedness, including our 10% senior notes, and to fund planned capital expenditures will depend on our ability to generate sufficient cash flow from operations in the future. To a certain extent, this is subject to general economic, financial, competitive, legislative and regulatory conditions and other factors that are beyond our control, including the prices that we receive for our oil and natural gas production.

We cannot assure you that our business will generate sufficient cash flow from operations or that future borrowings will be available to us under our bank credit facility in an amount sufficient to enable us to pay principal and interest on our indebtedness, including our 10% senior notes, or to fund our other liquidity needs. If our cash flow and capital resources are insufficient to fund our debt obligations, we may be forced to reduce our planned capital expenditures, sell assets, seek additional equity or debt capital or restructure our debt. We cannot assure you that any of these remedies could, if necessary, be affected on commercially reasonable terms, or at all. In addition, any failure to make scheduled payments of interest and principal on our outstanding indebtedness would likely result in a reduction of our credit rating, which could harm our ability to incur additional indebtedness on acceptable terms. Our cash flow and capital resources may be insufficient for payment of interest on and principal of our debt in the future, including payments on our 10% senior notes, and any such alternative measures may be unsuccessful or may not permit us to meet scheduled debt service obligations, which could cause us to default on our obligations and could impair our liquidity.

### Declining general economic, business or industry conditions may have a material adverse effect on our results of operations, liquidity and financial condition.

Concerns over global economic conditions, energy costs, geopolitical issues, inflation, the availability and cost of credit, the European debt crisis and the United States financial market have contributed to increased economic uncertainty and diminished expectations for the global economy. In addition, future hostilities in the Middle East and the occurrence or threat of terrorist attacks in the United States or other countries could adversely affect the global economy. These factors, combined with volatile prices of oil and natural gas, declining business and consumer confidence and increased unemployment, have precipitated an economic slowdown and a recession. Concerns about global economic growth have had a significant adverse impact on global financial markets and commodity prices. If the economic climate in the United States or abroad deteriorates, worldwide demand for petroleum products could diminish, which could impact the price at which we can sell our production, affect the ability of our vendors, suppliers and customers to continue operations and ultimately adversely impact our results of operations, liquidity and financial condition.

#### We may not be able to obtain adequate financing when the need arises to execute our long-term operating strategy.

Our ability to execute our long-term operating strategy is highly dependent on having access to capital when the need arises. We historically have addressed our long-term liquidity needs through bank credit facilities, second lien term credit facilities, issuances of equity and debt securities, sales of assets, joint ventures and cash provided by operating activities. We will examine the following alternative sources of long-term capital as dictated by current economic conditions:

- borrowings from banks or other lenders;
- the sale of non-core assets:
- the issuance of debt securities;
- the sale of common stock, preferred stock or other equity securities;
- joint venture financing; and
- production payments.

The availability of these sources of capital when the need arises will depend upon a number of factors, some of which are beyond our control. These factors include general economic and financial market conditions, oil and natural gas prices, our credit ratings, interest rates, market perceptions of us or the oil and gas industry, our market value and our operating performance. We may be unable to execute our long-term operating strategy if we cannot obtain capital from these sources when the need arises.

Restrictive debt covenants could limit our growth and our ability to finance our operations, fund our capital needs, respond to changing conditions and engage in other business activities that may be in our best interests.

Our bank credit facility and the indenture governing our 10% senior notes contain a number of significant covenants that, among other things, restrict or limit our ability to:

- pay dividends or distributions on our capital stock or issue preferred stock;
- repurchase, redeem or retire our capital stock or subordinated debt;
- make certain loans and investments;
- place restrictions on the ability of subsidiaries to make distributions;
- sell assets, including the capital stock of subsidiaries;
- enter into certain transactions with affiliates;
- create or assume certain liens on our assets;
- enter into sale and leaseback transactions;
- merge or to enter into other business combination transactions;
- enter into transactions that would result in a change of control of us; or
- engage in other corporate activities.

Also, our bank credit facility and the indenture governing our 10% senior notes require us to maintain compliance with specified financial ratios and satisfy certain financial condition tests. Our ability to comply with these ratios and financial condition tests may be affected by events beyond our control, and we cannot assure you that we will meet these ratios and financial condition tests. These financial ratio restrictions and financial condition tests could limit our ability to obtain future financings, make needed capital expenditures, withstand a future downturn in our business or the economy in general or otherwise conduct necessary corporate activities. We may also be prevented from taking advantage of business opportunities that arise because of the limitations that the restrictive covenants under our bank credit facility and the indenture governing our 10% senior notes impose on us.

A breach of any of these covenants or our inability to comply with the required financial ratios or financial condition tests could result in a default under our bank credit facility and our 10% senior notes. A default, if not cured or waived, could result in all indebtedness outstanding under our bank credit facility and our 10% senior notes to become immediately due and payable. If that should occur, we may not be able to pay all such debt or borrow sufficient funds to refinance it. Even if new financing were then available, it may not be on terms that are acceptable to us. If we were unable to repay those amounts, the lenders could accelerate the maturity of the debt or proceed against any collateral granted to them to secure such defaulted debt.

### Our future success depends upon our ability to find, develop, produce and acquire additional oil and natural gas reserves that are economically recoverable.

As is generally the case in the Gulf Coast Basin where approximately 40% of our current production is located, many of our producing properties are characterized by a high initial production rate, followed by a steep decline in production. In order to maintain or increase our reserves, we must constantly locate and develop or acquire new oil and natural gas reserves to replace those being depleted by production. We must do this even during periods of low oil and natural gas prices when it is difficult to raise the capital necessary to finance our exploration, development and acquisition activities. Without successful exploration, development or acquisition activities, our reserves and revenues will decline rapidly. We may not be able to find and develop or acquire additional reserves at an acceptable cost or have access to necessary financing for these activities, either of which would have a material adverse effect on our financial condition.

### Approximately 40% of our production is exposed to the additional risk of severe weather, including hurricanes and tropical storms, as well as flooding, coastal erosion and sea level rise.

At December 31, 2013, approximately 40% of our production and approximately 20% of our estimated proved reserves are located in the Gulf of Mexico and along the Gulf Coast Basin. Operations in this area are subject to severe weather, including hurricanes and tropical storms, as well as flooding, coastal erosion and sea level rise. Some of these adverse conditions can be

severe enough to cause substantial damage to facilities and possibly interrupt production. For example, certain of our Gulf Coast Basin properties have experienced damages and production downtime as a result of storms including Hurricanes Katrina and Rita, and more recently Hurricanes Gustav and Ike. In addition, according to certain scientific studies, emissions of carbon dioxide, methane, nitrous oxide and other gases commonly known as greenhouse gases may be contributing to global warming of the earth's atmosphere and to global climate change, which may exacerbate the severity of these adverse conditions. As a result, such conditions may pose increased climate-related risks to our assets and operations.

In accordance with customary industry practices, we maintain insurance against some, but not all, of these risks; however, losses could occur for uninsured risks or in amounts in excess of existing insurance coverage. We cannot assure you that we will be able to maintain adequate insurance in the future at rates we consider reasonable or that any particular types of coverage will be available. An event that is not fully covered by insurance could have a material adverse effect on our financial position and results of operations.

### Losses and liabilities from uninsured or underinsured drilling and operating activities could have a material adverse effect on our financial condition and operations.

We maintain several types of insurance to cover our operations, including worker's compensation, maritime employer's liability and comprehensive general liability. Amounts over base coverages are provided by primary and excess umbrella liability policies. We also maintain operator's extra expense coverage, which covers the control of drilling or producing wells as well as redrilling expenses and pollution coverage for wells out of control.

We may not be able to maintain adequate insurance in the future at rates we consider reasonable, or we could experience losses that are not insured or that exceed the maximum limits under our insurance policies. If a significant event that is not fully insured or indemnified occurs, it could materially and adversely affect our financial condition and results of operations.

### Lower oil and natural gas prices may cause us to record ceiling test write-downs, which could negatively impact our results of operations.

We use the full cost method of accounting to account for our oil and natural gas operations. Accordingly, we capitalize the cost to acquire, explore for and develop oil and natural gas properties. Under full cost accounting rules, the net capitalized costs of oil and natural gas properties may not exceed a "full cost ceiling" which is based upon the present value of estimated future net cash flows from proved reserves, including the effect of hedges in place, discounted at 10%, plus the lower of cost or fair market value of unproved properties. If at the end of any fiscal period we determine that the net capitalized costs of oil and natural gas properties exceed the full cost ceiling, we must charge the amount of the excess to earnings in the period then ended. This is called a "ceiling test write-down." This charge does not impact cash flow from operating activities, but does reduce our net income and stockholders' equity. Once incurred, a write-down of oil and natural gas properties is not reversible at a later date.

We review the net capitalized costs of our properties quarterly, using a single price based on the beginning of the month average of oil and natural gas prices for the prior 12 months. We also assess investments in unproved properties periodically to determine whether impairment has occurred. The risk that we will be required to further write down the carrying value of our oil and gas properties increases when oil and natural gas prices are low or volatile. In addition, write-downs may occur if we experience substantial downward adjustments to our estimated proved reserves or our unproved property values, or if estimated future development costs increase. As a result of the decline in commodity prices, we recognized ceiling test write-downs totaling \$137.1 million and \$18.9 million during the years ended December 31, 2012 and December 31, 2011, respectively. While no such write-downs occurred during 2013, we may experience further ceiling test write-downs or other impairments in the future. In addition, any future ceiling test cushion would be subject to fluctuation as a result of acquisition or divestiture activity.

#### Factors beyond our control affect our ability to market oil and natural gas.

The availability of markets and the volatility of product prices are beyond our control and represent a significant risk. The marketability of our production depends upon the availability and capacity of natural gas gathering systems, pipelines and processing facilities. The unavailability or lack of capacity of these systems and facilities could result in the shut-in of producing wells or the delay or discontinuance of development plans for properties. Our ability to market oil and natural gas also depends on other factors beyond our control. These factors include:

- the level of domestic production and imports of oil and natural gas;
- the proximity of natural gas production to natural gas pipelines;
- the availability of pipeline capacity;

- the demand for oil and natural gas by utilities and other end users;
- the availability of alternate fuel sources;
- the effect of inclement weather, such as hurricanes;
- state and federal regulation of oil and natural gas marketing; and
- federal regulation of natural gas sold or transported in interstate commerce.

If these factors were to change dramatically, our ability to market oil and natural gas or obtain favorable prices for our oil and natural gas could be adversely affected.

### The explosion and sinking of the Deepwater Horizon drilling rig in the Gulf of Mexico in April 2010 and the resulting oil spill may significantly increase our risks, costs and delays.

The explosion and sinking of the Deepwater Horizon drilling rig in the Gulf of Mexico in April 2010 and the resulting oil spill may significantly impact the risks we face. The Deepwater Horizon incident and resulting legislative, regulatory and enforcement changes, including increased tort liability, could increase our liability if any incidents occur on our offshore operations. We cannot predict the ultimate impact the Deepwater Horizon incident and resulting changes in regulation of offshore oil and natural gas operations will have on our business or operations.

In response to the spill, and during a moratorium on deepwater (below 500 feet) drilling activities implemented between May 30, 2010 and October 12, 2010, the BOEMRE issued a series of active "Notices to Lessees and Operators", or NTLs, and adopted changes to its regulations to impose a variety of new measures intended to help prevent a similar disaster in the future.

Offshore operators, including those operating in deepwater, OCS waters and shallow waters, where we have substantial operations, must comply with strict new safety and operating requirements. For example, permit applications for drilling projects must meet new standards with respect to well design, casing and cementing, blowout preventers, safety certification, emergency response, and worker training. Operators of all offshore waters are also required to demonstrate the availability of adequate spill response and blowout containment resources. In addition, the BSEE imposed, for the first time, requirements that offshore operators maintain comprehensive safety and environmental programs. Such developments have the potential to increase our costs of doing business.

## We may need to obtain bonds or other surety in order to maintain compliance with applicable regulations, which, if required, could be costly and reduce borrowings available under our bank credit facility or any other credit facilities we may enter into in the future.

Regulations with respect to offshore operations govern, among other things, engineering and construction specifications for production facilities, safety procedures, plugging and abandonment of wells on the OCS of the Gulf of Mexico and removal of facilities. Lessees subject to these regulations are generally required to have substantial net worth or post bonds or other acceptable assurances so that the various obligations of lessees on the Gulf of Mexico shelf will be met. While we have been exempt from such supplemental bonding requirements in the past, the BOEM has recently notified us that beginning in 2014 we will need to post supplemental bonding or some form of collateral for certain of our offshore properties. We are currently evaluating the cost of compliance with these supplemental bonding requirements and the potential collateral that would need to be provided. We believe that we will be able to satisfy the collateral requirements using a combination of our existing cash on hand and letters of credit available under our bank credit facility. Our borrowings available under our bank credit facility will be reduced to the extent we issue letters of credit to support the issuance of these bonds or other surety. The cost of compliance with these supplemental bonding requirements is not expected to be material.

### Federal and state legislation and regulatory initiatives relating to oil and natural gas development and hydraulic fracturing could result in increased costs and additional operating restrictions or delays.

Hydraulic fracturing involves the injection of water, sand and chemicals under pressure into rock formations to enhance oil and natural gas production. Hydraulic fracturing using fluids other than diesel is currently exempt from regulation under the federal Safe Drinking Water Act, but opponents of hydraulic fracturing have called for further study of the technique's environmental effects and, in some cases, a moratorium on the use of the technique. Several proposals have been submitted to Congress that, if implemented, would subject all hydraulic fracturing to regulation under the Safe Drinking Water Act. Further, the USEPA is conducting a scientific study to investigate the possible relationships between hydraulic fracturing and drinking water. The USEPA published a progress report on this study in December 2012, and the final draft report is scheduled for completion during 2014. The USEPA has also promulgated rules to limit air emissions from many hydraulically fractured natural gas wells. The new regulations will require use of equipment to capture gases that come from the well during the drilling process (so-called green

completions) after January 1, 2015. Other new requirements mandate tighter standards for emissions associated with gas production, storage and transport. Additionally, in May 2012, the BLM proposed rules to regulate the use of hydraulic fracturing on federal and tribal lands, but following extensive public comment on the proposals, issued a revised proposal in May 2013. The revised proposal which also addresses disclosure of fluids used in the fracturing process, integrity of well construction, and the management and disposal of wastewater that flows back from the drilling process, has also generated substantial public comment and no final rule has yet been promulgated.

A number of states, including Louisiana and Texas, have required operators or service companies to disclose chemical components in fluids used for hydraulic fracturing. Some states have also imposed, or are considering, more stringent regulation of oil and natural gas exploration and production activities involving hydraulic fracturing by, among other things, promulgating well completion requirements, imposing controls on storage, recycling and disposal of flowback fluids, and increasing reporting obligations. In addition, concerns related to the impacts from hydraulic fracturing have led several states to ban new natural gas development or to impose moratoria on use of hydraulic fracturing in various sensitive areas, including some areas overlying the Marcellus Shale. Similar action could be taken to preclude or limit natural gas development in other locations.

Recent seismic events have been observed in some areas (including Oklahoma, Ohio and Texas) where hydraulic fracturing has taken place. Some scientists believe the increased seismic activity may result from deep well fluid injection associated with use of hydraulic fracturing. Additional regulatory measures designed to minimize or avoid damage to geologic formations may be imposed to address such concerns.

Concerns regarding climate change have led the Congress, various states and environmental agencies to consider a number of initiatives to restrict or regulate emissions of greenhouse gases, such as carbon dioxide and methane. Among other things, in the absence of new federal legislation, the USEPA promulgated regulations imposing reporting and other requirements on sources of significant emissions of greenhouse gases. Stricter regulations of greenhouse gases could require us to incur costs to reduce emissions of greenhouse gases associated with our operations, or could adversely affect demand for the oil and natural gas we produce. In addition, climate change that results in physical effects such as increased frequency and severity of storms, floods and other climatic events, could disrupt our exploration and production operations and cause us to incur significant costs in preparing for and responding to those effects.

Although it is not possible at this time to predict the final outcome of the USEPA's study or the requirements of any additional federal or state legislation or regulation regarding hydraulic fracturing, management of drilling fluids, well integrity requirements or climate change, any new federal or state restrictions imposed on oil and gas exploration and production activities in areas in which we conduct business could significantly increase our operating, capital and compliance costs as well as delay our ability to develop oil and natural gas reserves. In addition to increased regulation of our business, we may also experience an increase in litigation seeking damages as a result of heightened public concerns related to air quality, water quality, and other environmental impacts.

### The adoption of derivatives legislation by Congress, and implementation of that legislation by federal agencies, could have an adverse impact on our ability to mitigate risks associated with our business.

On July 21, 2010, the President signed into law the Dodd-Frank Wall Street Reform and Consumer Protection Act, or the Dodd-Frank Reform Act, which, among other provisions, establishes federal oversight and regulation of the over-the-counter derivatives market and entities that participate in that market. The legislation required the Commodities Futures Trading Commission, or the CFTC, and the SEC to promulgate rules and regulations implementing the new legislation, which they have done since late 2010. The CFTC has introduced dozens of proposed rules coming out of the Dodd-Frank Reform Act, and has promulgated numerous final rules based on those proposals. The effect of the proposed rules and any additional regulations on our business is not yet entirely clear, but it is increasingly clear that the costs of derivatives-based hedging for commodities will likely increase for all market participants. Of particular concern, the Dodd-Frank Reform Act does not explicitly exempt end users from the requirements to post margin in connection with hedging activities. While several senators have indicated that it was not the intent of the Act to require margin from end users, the exemption is not in the Act. While rules proposed by the CFTC and federal banking regulators appear to allow for non-cash collateral and certain exemptions from margin for end users, the rules are not final and uncertainty remains. The full range of new Dodd-Frank requirements to be enacted, to the extent applicable to us or our derivatives counterparties, may result in increased costs and cash collateral requirements for the types of derivative instruments we use to mitigate and otherwise manage our financial and commercial risks related to fluctuations in oil and natural gas prices. In addition, final rules were promulgated by the CFTC imposing federally-mandated position limits covering a wide range of derivatives positions, including non-exchange traded bilateral swaps related to commodities including oil and natural gas. These position limit rules were vacated by a Federal court in September 2012, and the CFTC has appealed that decision and could repromulgate the rules in a manner that addresses the defects identified by the court. If these position limits rules go into effect in the future, they are likely to increase regulatory monitoring and compliance costs for all market participants, even where a given trading entity is not in danger of breaching position limits. These and other regulatory developments stemming from the Dodd-Frank Reform Act, including stringent new reporting requirements for derivatives positions and detailed criteria that must be

satisfied to continue to enter into uncleared swap transactions, could have a material impact on our derivatives trading and hedging activities in the form of increased transaction costs and compliance responsibilities. Any of the foregoing consequences could have a material adverse effect on our financial position, results of operations and cash flows.

### Proposed changes to U.S. tax laws, if adopted, could have an adverse effect on our business, financial condition, results of operations and cash flows.

From time to time legislative proposals are made that would, if enacted, make significant changes to U.S. tax laws. These proposed changes have included, among others, eliminating the immediate deduction for intangible drilling and development costs, eliminating the deduction from income for domestic production activities relating to oil and natural gas exploration and development, repealing the percentage depletion allowance for oil and natural gas properties and extending the amortization period for certain geological and geophysical expenditures. Such proposed changes in the U.S. tax laws, if adopted, or other similar changes that reduce or eliminate deductions currently available with respect to oil and natural gas exploration and development, could adversely affect our business, financial condition, results of operations and cash flows.

### We face strong competition from larger oil and natural gas companies that may negatively affect our ability to carry on operations.

We operate in the highly competitive areas of oil and natural gas exploration, development and production. Factors that affect our ability to compete successfully in the marketplace include:

- the availability of funds and information relating to a property;
- the standards established by us for the minimum projected return on investment; and
- the transportation of natural gas.

Our competitors include major integrated oil companies, substantial independent energy companies, affiliates of major interstate and intrastate pipelines and national and local natural gas gatherers, many of which possess greater financial and other resources than we do. If we are unable to successfully compete against our competitors, our business, prospects, financial condition and results of operations may be adversely affected.

#### SEC rules could limit our ability to book additional proved undeveloped reserves in the future.

SEC rules require that, subject to limited exceptions, proved undeveloped reserves may only be booked if they relate to wells scheduled to be drilled within five years of the date of booking. This requirement may limit our potential to book additional proved undeveloped reserves as we pursue our drilling program. Moreover, we may be required to write down our proved undeveloped reserves if we do not drill on those reserves within the required five-year time frame. We removed approximately 4.3 Bcfe and 5.5 Bcfe of proved undeveloped reserves in 2013 and 2012, respectively, as a result of the five year rule. These write-downs represented approximately 1% and 2% of the respective total year-end proved reserves at December 31, 2013 and 2012.

Our actual production, revenues and expenditures related to our reserves are likely to differ from our estimates of proved reserves. We may experience production that is less than estimated and drilling costs that are greater than estimated in our reserve report. These differences may be material.

Although the estimates of our oil and natural gas reserves and future net cash flows attributable to those reserves were prepared by Ryder Scott Company, L.P., our independent petroleum and geological engineers, we are ultimately responsible for the disclosure of those estimates. Reserve engineering is a complex and subjective process of estimating underground accumulations of oil and natural gas that cannot be measured in an exact manner. Estimates of economically recoverable oil and natural gas reserves and of future net cash flows necessarily depend upon a number of variable factors and assumptions, including:

- historical production from the area compared with production from other similar producing wells;
- the assumed effects of regulations by governmental agencies;
- · assumptions concerning future oil and natural gas prices; and
- assumptions concerning future operating costs, severance and excise taxes, development costs and work-over and remedial costs.

Because all reserve estimates are to some degree subjective, each of the following items may differ materially from those assumed in estimating proved reserves:

- the quantities of oil and natural gas that are ultimately recovered;
- the production and operating costs incurred;
- the amount and timing of future development expenditures; and
- future oil and natural gas sales prices.

Furthermore, different reserve engineers may make different estimates of reserves and cash flows based on the same available data. Historically, the difference between our actual production and the production estimated in a prior year's reserve report has not been material. Our 2013 production, excluding the impact from the Gulf of Mexico Acquisition, was approximately 8% greater than amounts projected in our 2012 reserve report. We cannot assure you that these differences will not be material in the future.

Approximately 33% of our estimated proved reserves at December 31, 2013 are undeveloped and 8% were developed, non-producing. Recovery of undeveloped reserves requires significant capital expenditures and successful drilling operations. The reserve data assumes that we will make significant capital expenditures to develop and produce our reserves. Although we have prepared estimates of our oil and natural gas reserves and the costs associated with these reserves in accordance with industry standards, we cannot assure you that the estimated costs are accurate, that development will occur as scheduled or that the actual results will be as estimated. In addition, the recovery of undeveloped reserves is generally subject to the approval of development plans and related activities by applicable state and/or federal agencies. Statutes and regulations may affect both the timing and quantity of recovery of estimated reserves. Such statutes and regulations, and their enforcement, have changed in the past and may change in the future, and may result in upward or downward revisions to current estimated proved reserves.

You should not assume that the standardized measure of discounted cash flows is the current market value of our estimated oil and natural gas reserves. In accordance with SEC requirements, the standardized measure of discounted cash flows from proved reserves at December 31, 2013 are based on twelve-month average prices and costs as of the date of the estimate. These prices and costs will change and may be materially higher or lower than the prices and costs as of the date of the estimate. Any changes in consumption by oil and natural gas purchasers or in governmental regulations or taxation may also affect actual future net cash flows. The timing of both the production and the expenses from the development and production of oil and natural gas properties will affect the timing of actual future net cash flows from proved reserves and their present value. In addition, the 10% discount factor we use when calculating standardized measure of discounted cash flows for reporting requirements in compliance with accounting requirements is not necessarily the most appropriate discount factor. The effective interest rate at various times and the risks associated with our operations or the oil and natural gas industry in general will affect the accuracy of the 10% discount factor.

### We may be unable to successfully identify, execute or effectively integrate future acquisitions, which may negatively affect our results of operations.

Acquisitions of oil and gas businesses and properties have been an important element of our business, and we will continue to pursue acquisitions in the future. In the last several years, we have pursued and consummated acquisitions that have provided us opportunities to grow our production and reserves. Although we regularly engage in discussions with, and submit proposals to, acquisition candidates, suitable acquisitions may not be available in the future on reasonable terms. If we do identify an appropriate acquisition candidate, we may be unable to successfully negotiate the terms of an acquisition, finance the acquisition or, if the acquisition occurs, effectively integrate the acquired business into our existing business. Negotiations of potential acquisitions and the integration of acquired business operations may require a disproportionate amount of management's attention and our resources. Even if we complete additional acquisitions, continued acquisition financing may not be available or available on reasonable terms, any new businesses may not generate revenues comparable to our existing business, the anticipated cost efficiencies or synergies may not be realized and these businesses may not be integrated successfully or operated profitably. The success of any acquisition will depend on a number of factors, including the ability to estimate accurately the recoverable volumes of reserves, rates of future production and future net revenues attainable from the reserves and to assess possible environmental liabilities. Our inability to successfully identify, execute or effectively integrate future acquisitions may negatively affect our results of operations.

Even though we perform due diligence reviews (including a review of title and other records) of the major properties we seek to acquire that we believe is consistent with industry practices, these reviews are inherently incomplete. It is generally not feasible for us to perform an in-depth review of every individual property and all records involved in each acquisition. However, even an in-depth review of records and properties may not necessarily reveal existing or potential problems or permit us to become

familiar enough with the properties to assess fully their deficiencies and potential. Even when problems are identified, we may assume certain environmental and other risks and liabilities in connection with the acquired businesses and properties. The discovery of any material liabilities associated with our acquisitions could harm our results of operations.

In addition, acquisitions of businesses may require additional debt or equity financing, resulting in additional leverage or dilution of ownership. Our bank credit facility contains certain covenants that limit, or which may have the effect of limiting, among other things acquisitions, capital expenditures, the sale of assets and the incurrence of additional indebtedness.

#### Hedging production may limit potential gains from increases in commodity prices or result in losses.

We enter into hedging arrangements from time to time to reduce our exposure to fluctuations in oil and natural gas prices and to achieve more predictable cash flow. Our hedges at December 31, 2013 are in the form of swaps placed with the commodity trading branches of JPMorgan Chase Bank and Wells Fargo Bank, N.A., both of which participate in our bank credit facility. We cannot assure you that these or future counterparties will not become credit risks in the future. Hedging arrangements expose us to risks in some circumstances, including situations when the counterparty to the hedging contract defaults on the contractual obligations or there is a change in the expected differential between the underlying price in the hedging agreement and actual prices received. These hedging arrangements may limit the benefit we could receive from increases in the market or spot prices for oil and natural gas. Oil and natural gas hedges increased our total oil and gas sales by approximately \$0.9 million, \$9.1 million and \$2.4 million during 2013, 2012 and 2011, respectively. We cannot assure you that the hedging transactions we have entered into, or will enter into, will adequately protect us from fluctuations in oil and natural gas prices.

#### The unavailability, high cost or shortages of rigs, equipment, raw materials, supplies or personnel may restrict our operations.

The oil and natural gas industry is cyclical, which can result in shortages of drilling rigs, equipment, raw materials (particularly sand and other proppants), supplies and personnel. When shortages occur, the costs and delivery times of rigs, equipment and supplies increase and demand for, and wage rates of, qualified drilling rig crews also rise with increases in demand for oil and natural gas. In accordance with customary industry practice, we rely on independent third-party service providers to provide most of the services necessary to drill new wells. Shortages of drilling rigs, equipment, raw materials (particularly sand and other proppants), supplies, drilling rig crews and other personnel, trucking services, tubulars, fracking and completion services and production equipment, including equipment and personnel related to horizontal drilling activities, could delay or restrict our exploration and development operations, which in turn could impair our financial condition and results of operations.

#### The loss of key management or technical personnel could adversely affect our ability to operate.

Our operations are dependent upon a diverse group of key senior management and technical personnel. In addition, we employ numerous other skilled technical personnel, including geologists, geophysicists and engineers that are essential to our operations. We cannot assure you that such individuals will remain with us for the immediate or foreseeable future. The unexpected loss of the services of one or more of any of these key management or technical personnel could have an adverse effect on our operations.

#### Operating hazards may adversely affect our ability to conduct business.

Our operations are subject to risks inherent in the oil and natural gas industry, such as:

- unexpected drilling conditions including blowouts, cratering and explosions;
- uncontrollable flows of oil, natural gas or well fluids;
- equipment failures, fires or accidents;
- pollution and other environmental risks; and
- shortages in experienced labor or shortages or delays in the delivery of equipment.

These risks could result in substantial losses to us from injury and loss of life, damage to and destruction of property and equipment, pollution and other environmental damage and suspension of operations. Our offshore operations are also subject to a variety of operating risks peculiar to the marine environment, such as hurricanes or other adverse weather conditions and more extensive governmental regulation. These regulations may, in certain circumstances, impose strict liability for pollution damage or result in the interruption or termination of operations.

# Environmental compliance costs and environmental liabilities could have a material adverse effect on our financial condition and operations.

Our operations are subject to numerous federal, state and local laws and regulations governing the discharge of materials into the environment or otherwise relating to environmental protection. These laws and regulations may:

- require the acquisition of permits before drilling commences;
- restrict the types, quantities and concentration of various substances that can be released into the environment from drilling and production activities;
- limit or prohibit drilling activities on certain lands lying within wilderness, wetlands and other protected areas;
- require remedial measures to mitigate pollution from former operations, such as plugging abandoned wells; and
- impose substantial liabilities for pollution resulting from our operations.

The trend toward stricter requirements and standards in environmental legislation and regulation is likely to continue. Our drilling plans may be delayed, modified or precluded as a result of new or modified environmental mandates, including those imposed to protect the American Burying Beetle and other endangered species that may be present in the vicinity of our operations. The enactment of stricter legislation or the adoption of stricter regulations could have a significant impact on our operating costs, as well as on the oil and natural gas industry in general.

Our operations could result in liability for personal injuries, property damage, oil spills, discharge of hazardous materials, remediation and clean-up costs and other environmental damages. We could also be liable for environmental damages caused by previous property owners. As a result, substantial liabilities to third parties or governmental entities may be incurred which could have a material adverse effect on our financial condition and results of operations. We maintain insurance coverage for our operations, including limited coverage for sudden and accidental environmental damages, but this insurance may not extend to the full potential liability that could be caused by sudden and accidental environmental damages and further may not cover environmental damages that occur over time. Accordingly, we may be subject to liability or may lose the ability to continue exploration or production activities upon substantial portions of our properties if certain environmental damages occur.

# We cannot control the activities on properties we do not operate and we are unable to ensure the proper operation and profitability of these non-operated properties.

We do not operate all of the properties in which we have an interest. As a result, we have limited ability to exercise influence over, and control the risks associated with, the operation of these properties. The success and timing of drilling and development activities on our partially owned properties operated by others therefore will depend upon a number of factors outside of our control, including the operator's:

- timing and amount of capital expenditures;
- expertise and diligence in adequately performing operations and complying with applicable agreements;
- financial resources;
- · inclusion of other participants in drilling wells; and
- use of technology.

As a result of any of the above or an operator's failure to act in ways that are in our best interest, our allocated production revenues and results of operations could be adversely affected.

# Ownership of working interests and overriding royalty interests in certain of our properties by certain of our officers and directors potentially creates conflicts of interest.

Certain of our executive officers and directors or their respective affiliates are working interest owners or overriding royalty interest owners in certain properties. In their capacity as working interest owners, they are required to pay their proportionate share of all costs and are entitled to receive their proportionate share of revenues in the normal course of business. As overriding royalty interest owners they are entitled to receive their proportionate share of revenues in the normal course of business. There is a potential conflict of interest between us and such officers and directors with respect to the drilling of additional wells or other development operations with respect to these properties.

# Loss of our information and computer systems could adversely affect our business.

We are heavily dependent on our information systems and computer based programs, including our well operations information, seismic data, electronic data processing and accounting data. If any of such programs or systems were to fail or create erroneous information in our hardware or software network infrastructure, possible consequences include our loss of communication links, inability to find, produce, process and sell oil and natural gas and inability to automatically process commercial transactions or engage in similar automated or computerized business activities. Any such consequence could have a material adverse effect on our business.

# A terrorist attack or armed conflict could harm our business.

Terrorist activities, anti-terrorist efforts and other armed conflicts involving the United States or other countries may adversely affect the United States and global economies and could prevent us from meeting our financial and other obligations. If any of these events occur, the resulting political instability and societal disruption could reduce overall demand for oil and natural gas, potentially putting downward pressure on demand for our services and causing a reduction in our revenues. Oil and natural gas related facilities could be direct targets of terrorist attacks, and our operations could be adversely impacted if infrastructure integral to our customers' operations is destroyed or damaged. Costs for insurance and other security may increase as a result of these threats, and some insurance coverage may become more difficult to obtain, if available at all.

# Risks Relating to Our Outstanding Common Stock

# Our stock price could be volatile, which could cause you to lose part or all of your investment.

The stock market has from time to time experienced significant price and volume fluctuations that may be unrelated to the operating performance of particular companies. In particular, the market price of our common stock, like that of the securities of other energy companies, has been and may continue to be highly volatile. During 2013, the sales price of our stock ranged from a low of \$3.55 per share (on February 28, 2013) to a high of \$5.39 per share (on January 23, 2013). Factors such as announcements concerning changes in prices of oil and natural gas, the success of our acquisition, exploration and development activities, the availability of capital, and economic and other external factors, as well as period-to-period fluctuations and financial results, may have a significant effect on the market price of our common stock.

From time to time, there has been limited trading volume in our common stock. In addition, there can be no assurance that there will continue to be a trading market or that any securities research analysts will continue to provide research coverage with respect to our common stock. It is possible that such factors will adversely affect the market for our common stock.

# Issuance of shares in connection with financing transactions or under stock incentive plans will dilute current stockholders.

We have issued 1,495,000 shares of Series B Preferred Stock, which are presently convertible into 5,147,734 shares of our common stock. In addition, pursuant to our stock incentive plan, our management is authorized to grant stock awards to our employees, directors and consultants. You will incur dilution upon the conversion of the Series B Preferred Stock, the exercise of any outstanding stock awards or the grant of any restricted stock. In addition, if we raise additional funds by issuing additional common stock, or securities convertible into or exchangeable or exercisable for common stock, further dilution to our existing stockholders will result, and new investors could have rights superior to existing stockholders.

# The number of shares of our common stock eligible for future sale could adversely affect the market price of our stock.

At December 31, 2013, we had reserved approximately 1.9 million shares of common stock for issuance under outstanding options and approximately 5.1 million shares issuable upon conversion of the Series B Preferred Stock. All of these shares of common stock are registered for sale or resale on currently effective registration statements. We may issue additional restricted securities or register additional shares of common stock under the Securities Act in the future. The issuance of a significant number of shares of common stock upon the exercise of stock options, the granting of restricted stock or the conversion of the Series B Preferred Stock, or the availability for sale, or sale, of a substantial number of the shares of our common stock eligible for future sale under effective registration statements, under Rule 144 or otherwise, could adversely affect the market price of the common stock.

# Provisions in our certificate of incorporation and bylaws could delay or prevent a change in control of our company, even if that change would be beneficial to our stockholders.

Certain provisions of our certificate of incorporation and bylaws may delay, discourage, prevent or render more difficult an attempt to obtain control of our company, whether through a tender offer, business combination, proxy contest or otherwise. These provisions include:

the charter authorization of "blank check" preferred stock;

- provisions that directors may be removed only for cause, and then only on approval of holders of a majority of the
  outstanding voting stock;
- a restriction on the ability of stockholders to call a special meeting and take actions by written consent; and
- provisions regulating the ability of our stockholders to nominate directors for election or to bring matters for action at annual meetings of our stockholders.

## We do not intend to pay dividends on our common stock and our ability to pay dividends on our common stock is restricted.

We have not paid dividends on our common stock, in cash or otherwise, and intend to retain our cash flow from operations for the future operation and development of our business. We are currently restricted from paying dividends on our common stock by our bank credit facility, the indenture governing the 10% senior notes and, in some circumstances, by the terms of our Series B Preferred Stock. Any future dividends also may be restricted by our then-existing debt agreements.

# Item 1B Unresolved Staff Comments

None

## Item 3. **Legal Proceedings**

PetroQuest is involved in litigation relating to claims arising out of its operations in the normal course of business, including worker's compensation claims, tort claims and contractual disputes. Some of the existing known claims against us are covered by insurance subject to the limits of such policies and the payment of deductible amounts by us. Management believes that the ultimate disposition of all uninsured or unindemnified matters resulting from existing litigation will not have a material adverse effect on PetroQuest's business or financial position.

# Item 4. Mine Safety Disclosures

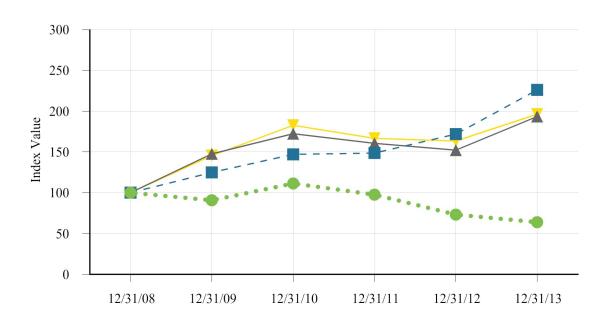

Not applicable.

### Market Price of and Dividends on Common Stock

Our common stock trades on the New York Stock Exchange under the symbol "PQ." The following table lists high and low sales prices per share for the periods indicated:

<u>2012</u>	<u>High</u>	Low
1st Quarter	\$ 7.39 \$	5.41
2nd Quarter	6.46	4.26
3rd Quarter	7.05	4.82
4th Quarter	7.00	4.69
<u>2013</u>		
1st Quarter	\$ 5.39 \$	3.55
2nd Quarter	5.10	3.85
3rd Quarter	4.74	3.87
4th Quarter	4.93	3.63

As of February 27, 2014, there were 287 common stockholders of record.

We have never paid a dividend on our common stock, cash or otherwise, and intend to retain our cash flow from operations for the future operation and development of our business. In addition, under our bank credit facility, the indenture governing the 10% senior notes, and, in some circumstances, the terms of our Series B Preferred Stock, we are restricted from paying cash dividends on our common stock. The payment of future dividends, if any, will be determined by our Board of Directors in light of conditions then existing, including our earnings, financial condition, capital requirements, restrictions in financing agreements, business conditions and other factors. See Item 1A. "Risk Factors – Risks Relating to our Outstanding Common Stock – We do not intend to pay dividends on our common stock and our ability to pay dividends on our common stock is restricted."

The following table sets forth certain information with respect to repurchases of our common stock during the quarter ended December 31, 2013.

	Total Number of Shares Purchased (1)	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plan or Program	Maximum Number (or Approximate Dollar Value) of Shares that May be Purchased Under the Plans or Programs
October 1—October 31, 2013	_	\$	_	
November 1—November 30, 2013	57,145	\$ 4.18	_	_
December 1—December 31, 2013	_	\$ —	_	_

(1) All shares repurchased were surrendered by employees to pay tax withholding upon the vesting of restricted stock awards.

### Item 6. Selected Financial Data

The following table sets forth, as of the dates and for the periods indicated, selected financial information for the Company. The financial information for each of the five years in the period ended December 31, 2013 has been derived from the audited Consolidated Financial Statements of the Company for such periods. The information should be read in conjunction with "Management's Discussion and Analysis of Financial Condition and Results of Operations" and the Consolidated Financial Statements and notes thereto. The following information is not necessarily indicative of future results of the Company. All amounts are stated in U.S. dollars unless otherwise indicated.

	Year Ended December 31,									
		2013	2012 (1) 2011 (2)		2010		2009 (3)

- (1) The year ended December 31, 2012 includes a pre-tax ceiling test write-down of \$137.1 million.
- (2) The year ended December 31, 2011 includes a pre-tax ceiling test write-down of \$18.9 million.
- (3) The year ended December 31, 2009 includes a pre-tax ceiling test write-down of \$156.1 million.

Item 7.

# MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

## Overview

PetroQuest Energy, Inc. is an independent oil and gas company incorporated in the State of Delaware with operations in Oklahoma, Texas, and the Gulf Coast Basin. We seek to grow our production, proved reserves, cash flow and earnings at low finding and development costs through a balanced mix of exploration, development and acquisition activities. From the commencement of our operations in 1985 through 2002, we were focused exclusively in the Gulf Coast Basin with onshore properties principally in southern Louisiana and offshore properties in the shallow waters of the Gulf of Mexico shelf. During 2003, we began the implementation of our strategic goal of diversifying our reserves and production into longer life and lower risk onshore properties. As part of the strategic shift to diversify our asset portfolio and lower our geographic and geologic risk profile, we refocused our opportunity selection processes to reduce our average working interest in higher risk projects, shift capital to higher probability of success onshore wells and mitigate the risks associated with individual wells by expanding our drilling program across multiple basins.

We have successfully diversified into onshore, longer life basins in Oklahoma and Texas through a combination of selective acquisitions and drilling activity. Beginning in 2003 with our acquisition of the Carthage Field in Texas through 2013, we have invested approximately \$1.1 billion into growing our longer life assets. During the ten year period ended December 31, 2013, we have realized a 95% drilling success rate on 918 gross wells drilled. Comparing 2013 metrics with those in 2003, the year we implemented our diversification strategy, we have grown production by 294% and estimated proved reserves by 262%. At December 31, 2013, 81% of our estimated proved reserves and 63% of our 2013 production were derived from our longer life assets.

As a result of the impact of low natural gas prices on our revenues and cash flow, we have focused on growing our reserves and production through a balanced drilling budget with an increased emphasis on growing our oil and natural gas liquids production. In May 2010, we entered into the JDA, which provided us with \$85 million in cash during 2010 and 2011, along with a drilling carry that we have utilized since May 2010 to enhance economic returns by reducing our share of capital expenditures in the Woodford Shale and the Mississippian Lime. During 2013, we closed the Gulf of Mexico Acquisition. The aggregate purchase

price of the Gulf of Mexico Acquisition was \$188.8 million and it contributed 30.5 Bcfe to our estimated proved reserves at December 31, 2013 as well as 4.5 Bcfe of production during 2013. As a result of the JDA, the Gulf of Mexico Acquisition and the success of our drilling programs in each of our operating areas, we have grown our estimated proved reserves by 69% and production by 11% since year end 2009, including a 36% increase in our oil and natural gas liquids production during 2013.

# **Gulf of Mexico Acquisition**

On July 3, 2013, we closed the Gulf of Mexico Acquisition for an aggregate cash purchase price of \$188.8 million, reflecting an effective date of January 1, 2013. The Gulf of Mexico Acquisition was financed with the issuance of an additional \$200 million in aggregate principal amount of our 10% Senior Notes due 2017. The transaction included 16 gross wells located on seven platforms.

During 2013, the Acquired Assets contributed 4.5 Bcfe of total production, including 235,000 barrels of oil, and added 30.5 Bcfe of estimated proved reserves as of December 31, 2013. As a result of the Gulf of Mexico Acquisition, our acreage position in the Gulf Coast Basin increased 23% to 46,801 net acres. See "Note 2 - Acquisition" in Item 8. Financial Statements and Supplementary Data for additional details related to this transaction.

We believe the Gulf of Mexico Acquisition represents both a strategic and transformative transaction for us. This transaction builds upon our existing strategy of utilizing free cash flow from our shorter life, Gulf Coast Basin assets to develop our longer-life resource assets. As evidenced by the larger percentage of our production and estimated proved reserves now located in our longer lived basins, we have successfully leveraged our Gulf Coast free cash flow to help fund our substantial diversification efforts over the past several years. We plan to utilize a portion of the free cash flow generated from these acquired properties to accelerate the development of our Woodford Shale and Cotton Valley resource plays. In addition, based upon our experience and successful track record in exploiting reservoirs in the Gulf Coast Basin and Gulf of Mexico, we believe that we will be able to create value above the current estimated proved reserves associated with the Acquired Assets.

# **Critical Accounting Policies**

# Reserve Estimates

Our estimates of proved oil and gas reserves constitute those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation. At the end of each year, our proved reserves are estimated by independent petroleum engineers in accordance with guidelines established by the SEC. These estimates, however, represent projections based on geologic and engineering data. Reserve engineering is a subjective process of estimating underground accumulations of oil and gas that are difficult to measure. The accuracy of any reserve estimate is a function of the quantity and quality of available data, engineering and geological interpretation and professional judgment. Estimates of economically recoverable oil and gas reserves and future net cash flows necessarily depend upon a number of variable factors and assumptions, such as historical production from the area compared with production from other producing areas, the assumed effect of regulations by governmental agencies, and assumptions governing future oil and gas prices, future operating costs, severance taxes, development costs and workover costs. The future drilling costs associated with reserves assigned to proved undeveloped locations may ultimately increase to the extent that these reserves may be later determined to be uneconomic. Any significant variance in the assumptions could materially affect the estimated quantity and value of the reserves, which could affect the carrying value of our oil and gas properties and/or the rate of depletion of such oil and gas properties.

Disclosure requirements under Staff Accounting Bulletin 113 ("SAB 113") include provisions that permit the use of new technologies to determine proved reserves if those technologies have been demonstrated empirically to lead to reliable conclusions about reserve volumes. The rules also allow companies the option to disclose probable and possible reserves in addition to the existing requirement to disclose proved reserves. The disclosure requirements also require companies to report the independence and qualifications of third party preparers of reserves and file reports when a third party is relied upon to prepare reserves estimates. Pricing is based on a 12-month average price using beginning of the month pricing during the 12-month period prior to the ending date of the balance sheet to report oil and natural gas reserves. In addition, the 12-month average is also used to measure ceiling test impairments and to compute depreciation, depletion and amortization.

# Full Cost Method of Accounting

We use the full cost method of accounting for our investments in oil and gas properties. Under this method, all acquisition, exploration and development costs, including certain related employee costs, incurred for the purpose of exploring for and developing oil and natural gas are capitalized. Acquisition costs include costs incurred to purchase, lease or otherwise acquire

property. Exploration costs include the costs of drilling exploratory wells, including those in progress and geological and geophysical service costs in exploration activities. Development costs include the costs of drilling development wells and costs of completions, platforms, facilities and pipelines. Costs associated with production and general corporate activities are expensed in the period incurred. Sales of oil and gas properties, whether or not being amortized currently, are accounted for as adjustments of capitalized costs, with no gain or loss recognized, unless such adjustments would significantly alter the relationship between capitalized costs and proved reserves of oil and gas.

The costs associated with unevaluated properties are not initially included in the amortization base and primarily relate to ongoing exploration activities, unevaluated leasehold acreage and delay rentals, seismic data and capitalized interest. These costs are either transferred to the amortization base with the costs of drilling the related well or are assessed quarterly for possible impairment or reduction in value.

We compute the provision for depletion of oil and gas properties using the unit-of-production method based upon production and estimates of proved reserve quantities. Unevaluated costs and related carrying costs are excluded from the amortization base until the properties associated with these costs are evaluated. In addition to costs associated with evaluated properties, the amortization base includes estimated future development costs related to non-producing reserves. Our depletion expense is affected by the estimates of future development costs, unevaluated costs and proved reserves, and changes in these estimates could have an impact on our future earnings.

We capitalize certain internal costs that are directly identified with acquisition, exploration and development activities. The capitalized internal costs include salaries, employee benefits, costs of consulting services and other related expenses and do not include costs related to production, general corporate overhead or similar activities. We also capitalize a portion of the interest costs incurred on our debt. Capitalized interest is calculated using the amount of our unevaluated property and our effective borrowing rate.

Capitalized costs of oil and gas properties, net of accumulated depreciation, depletion and amortization ("DD&A") and related deferred taxes, are limited to the estimated future net cash flows from proved oil and gas reserves, including the effect of cash flow hedges in place, discounted at 10 percent, plus the lower of cost or fair value of unproved properties, as adjusted for related income tax effects (the full cost ceiling). If capitalized costs exceed the full cost ceiling, the excess is charged to write-down of oil and gas properties in the quarter in which the excess occurs.

Given the volatility of oil and gas prices, it is probable that our estimate of discounted future net cash flows from estimated proved oil and gas reserves will change in the near term. If oil or gas prices decline, even for only a short period of time, or if we have downward revisions to our estimated proved reserves, it is possible that further write-downs of oil and gas properties could occur in the future.

# **Future Abandonment Costs**

Future abandonment costs include costs to dismantle and relocate or dispose of our production platforms, gathering systems, wells and related structures and restoration costs of land and seabed. We develop estimates of these costs for each of our properties based upon the type of production structure, depth of water, reservoir characteristics, depth of the reservoir, market demand for equipment, currently available procedures and consultations with construction and engineering consultants. Because these costs typically extend many years into the future, estimating these future costs is difficult and requires management to make estimates and judgments that are subject to future revisions based upon numerous factors, including changing technology, the timing of estimated costs, the impact of future inflation on current cost estimates and the political and regulatory environment.

# **Derivative Instruments**

We seek to reduce our exposure to commodity price volatility by hedging a portion of our production through commodity derivative instruments. The estimated fair values of our commodity derivative instruments are recorded in the consolidated balance sheet. The changes in fair value of those derivative instruments that qualify for hedge accounting treatment are recorded in other comprehensive income (loss) until the hedged oil or natural gas quantities are produced. If a hedge becomes ineffective because the hedged production does not occur, or the hedge otherwise does not qualify for hedge accounting treatment, the changes in the fair value of the derivative are recorded in the income statement as derivative income (expense).

Our hedges are specifically referenced to NYMEX prices for oil and natural gas. We evaluate the effectiveness of our hedges at the time we enter the contracts, and periodically over the life of the contracts, by analyzing the correlation between NYMEX prices and the posted prices we receive from our designated production. Through this analysis, we are able to determine if a high correlation exists between the prices received for the designated production and the NYMEX prices at which the hedges will be settled. At December 31, 2013, our derivative instruments were designated effective cash flow hedges.

Estimating the fair value of derivative instruments requires valuation calculations incorporating estimates of future NYMEX prices, discount rates and price movements. As a result, we calculate the fair value of our commodity derivatives using an independent third-party's valuation model that utilizes market-corroborated inputs that are observable over the term of the derivative contract. Our fair value calculations also incorporate an estimate of the counterparties' default risk for derivative assets and an estimate of our default risk for derivative liabilities.

# **Results of Operations**

The following table sets forth certain information with respect to our oil and gas operations for the periods noted. These historical results are not necessarily indicative of results to be expected in future periods.

		Year Ended December 31,				
	_	2013		2012		2011
Production:						
Oil (Bbls)		680,980		520,590		572,096
Gas (Mcf)		29,225,843		27,466,228		24,462,933
Ngl (Mcfe)		4,754,223		3,366,774		2,287,846
Total Production (Mcfe)		38,065,946		33,956,542		30,183,355
Sales:						
Total oil sales	\$	70,476,065	\$	56,635,786	\$	60,064,426
Total gas sales		87,449,370		63,535,262		78,664,373
Total ngl sales		24,878,243		21,262,236		21,756,917
Total oil and gas sales	\$	182,803,678	\$	141,433,284	\$	160,485,716
Average sales prices:	_					
Oil (per Bbl)	\$	103.49	\$	108.79	\$	104.99
Gas (per Mcf)		2.99		2.31		3.22
Ngl (per Mcfe)		5.23		6.32		9.51
Per Mcfe		4.80		4.17		5.32

The above sales and average sales prices include increases (reductions) to revenue related to the settlement of gas hedges of \$1,098,000, \$6,846,000 and \$2,609,000, oil hedges of (\$232,000), \$1,529,000 and (\$192,000), and Ngl hedges of \$61,000, \$722,000 and zero for the twelve months ended December 31, 2013, 2012 and 2011, respectively.

# Comparison of Results of Operations for the Years Ended December 31, 2013 and 2012

Net income (loss) available to common stockholders totaled \$8,943,000 and (\$137,218,000) for the years ended December 31, 2013 and 2012, respectively. The primary fluctuations were as follows:

<u>Production</u> Total production increased 12% during the year ended December 31, 2013 as compared to the 2012 period. Gas production during the year ended December 31, 2013 increased 6% from the 2012 period. The increase in gas production was primarily the result of added production from the Gulf of Mexico Acquisition which closed on July 3, 2013. Additionally, gas production increased as a result of the successful drilling programs in our La Cantera field and our liquids rich Woodford acreage. Partially offsetting these increases were decreases in gas production due to normal production declines at our dry gas Oklahoma fields as well as certain of our legacy Gulf of Mexico fields in addition to the loss of production resulting from the sale of our Fayetteville assets in December 2012. As a result of a full year of production from the wells acquired in the Gulf of Mexico Acquisition and increased drilling activity planned for 2014, we expect our average daily gas production in 2014 to increase as compared to 2013.

Oil production during the year ended December 31, 2013 increased 31% as compared to the 2012 period due primarily to added production from the Gulf of Mexico Acquisition as well as the continued success of our La Cantera field. Partially offsetting these increases were decreases as a result of continued normal production declines in certain of our legacy Gulf of Mexico and East Texas fields. As a result of a full year of production from the wells acquired in the Gulf of Mexico Acquisition, we expect our average daily oil production to be significantly higher during 2014 as compared to 2013.

Ngl production during the year ended December 31, 2013 increased 41% from the 2012 period due to the success experienced in our La Cantera field and the liquids rich portion of our Oklahoma properties, as well as added production from the Gulf of Mexico Acquisition. Partially offsetting these increases were decreases as a result of normal production declines at certain of our legacy Gulf of Mexico fields. As a result of the increase in drilling activity planned for 2014 as well as a full year of production from

the wells acquired in the Gulf of Mexico Acquisition, we expect our daily Ngl production for 2014 to increase significantly compared to that of 2013.

<u>Prices</u> Including the effects of our hedges, average gas prices per Mcf for the year ended December 31, 2013 were \$2.99 as compared to \$2.31 for the 2012 period. Average oil prices per Bbl for the year ended December 31, 2013 were \$103.49 as compared to \$108.79 for the 2012 period and average Ngl prices per Mcfe were \$5.23 for the year ended December 31, 2013, as compared to \$6.32 for the 2012 period. Stated on an Mcfe basis, unit prices received during the year ended December 31, 2013 were 15% higher than the prices received during the 2012 period.

**Revenue** Including the effects of hedges, oil and gas sales during the twelve months ended December 31, 2013 increased 29% to \$182,804,000, as compared to oil and gas sales of \$141,433,000 during the 2012 period. The increased revenue during 2013 was primarily the result of higher average realized prices for our production during 2013 as well as increased production as discussed above.

Expenses Lease operating expenses for the year ended December 31, 2013 totaled \$43,743,000 as compared to \$38,890,000 during the 2012 period. Per unit lease operating expenses totaled \$1.15 per Mcfe during both of the twelve month periods ended December 31, 2013 and 2012. We expect the absolute amount of lease operating expenses to increase during 2014 as compared to 2013 as a result of the Gulf of Mexico Acquisition but we expect per unit lease operating costs to approximate per unit amounts in 2013.

Production taxes for the year ended December 31, 2013 totaled \$3,950,000 as compared to \$885,000 during the 2012 period. The significant reduction during the 2012 period was the result of recording a receivable of \$2,717,000 during June 2012 for refunds relative to severance tax previously paid on our Oklahoma horizontal wells that we are receiving incrementally through June, 2015. Because the majority of the assets purchased in the Gulf of Mexico Acquisition are located in Federal waters and are therefore not subject to production taxes, we do not expect a meaningful change to our production taxes during 2014 as compared to 2013.

General and administrative expenses during the year ended December 31, 2013 totaled \$26,512,000 as compared to \$22,957,000 during the 2012 period. Included in general and administrative expenses was non-cash, share-based compensation expense as follows (in thousands):

	Yea	Year Ended December 31,		
		2013		2012
Stock options:				
Incentive Stock Options	\$	310	\$	786
Non-Qualified Stock Options		222		660
Restricted stock		3,684		5,464
Non-cash share-based compensation	\$	4,216	\$	6,910

General and administrative expenses increased 15% during the year ended December 31, 2013 as compared to the 2012 period. Included in general and administrative expenses during the 2013 period is \$4,018,000 of transaction-related costs related to the Gulf of Mexico Acquisition. In addition, during 2013, we recognized approximately \$895,000 in general and administrative expenses associated with benefits due under the compensation agreements of the Company's Executive Vice-President and General Counsel, who passed away unexpectedly in September 2013. We capitalized \$13,514,000 of general and administrative costs during the year ended December 31, 2013 as compared to \$11,925,000 during the comparable 2012 period. General and administrative expenses in 2014 are expected to be lower than 2013 due to these non-recurring items.

DD&A expense on oil and gas properties for the year ended December 31, 2013 totaled \$69,357,000, or \$1.82 per Mcfe, as compared to \$59,496,000, or \$1.75 per Mcfe, during the comparable 2012 period. The increase in the per unit DD&A rate is primarily the result of the Gulf of Mexico Acquisition, which had a higher cost per unit as compared to our overall amortization base. After taking into effect the Gulf of Mexico Acquisition, we expect our DD&A rate for 2014 to be higher than the full year rate during 2013.

At December 31, 2012, the prices used in computing the estimated future net cash flows from our estimated proved reserves, including the effect of hedges in place at that date, averaged \$2.21 per Mcf of natural gas, \$102.81 per barrel of oil, and \$6.07 per Mcfe of Ngl. As a result of lower natural gas prices and their negative impact on certain of our longer-lived estimated proved reserves and estimated future net cash flows, we recognized ceiling test write-downs of \$137,100,000 during the year ended December 31, 2012. No such ceiling test write-down occurred during 2013.

Interest expense, net of amounts capitalized on unevaluated properties, totaled \$21,886,000 during the year ended December 31, 2013, as compared to \$9,808,000 during 2012. During the year ended December 31,2013, our capitalized interest totaled \$6,570,000

as compared to \$7,036,000 during the 2012 period. The increase in interest expense was a result of the issuance of an additional \$200 million of 10% senior notes, which were used to finance the Gulf of Mexico Acquisition in addition to increased borrowings outstanding under our bank credit facility during 2013 as compared to 2012. As a result, we expect interest expense for 2014 to be higher than that of 2013.

Income tax expense during the year ended December 31, 2013 totaled \$320,000, as compared to \$1,636,000 during the 2012 period. We typically provide for income taxes at a statutory rate of 35% adjusted for permanent differences expected to be realized, primarily statutory depletion, non-deductible stock compensation expenses and state income taxes. As a result of the ceiling test write-downs recognized during 2012, we have incurred a cumulative three-year loss. Because of the impact the cumulative loss has on the determination of the recoverability of deferred tax assets through future earnings, we assessed the realizability of our deferred tax assets based on the future reversals of existing deferred tax liabilities. Accordingly, we established a valuation allowance for a portion of our deferred tax asset. The valuation allowance was \$45,531,000 as of December 31, 2013.

# Comparison of Results of Operations for the Years Ended December 31, 2012 and 2011

Net income (loss) available to common stockholders totaled (\$137,218,000) and \$5,409,000 for the years ended December 31, 2012 and 2011, respectively. The primary fluctuations were as follows:

**Production** Total production increased 13% during the year ended December 31, 2012 as compared to the 2011 period. Gas production during the year ended December 31, 2012 increased 12% from the 2011 period. The increase in gas production was primarily the result of the success of our drilling programs in the Woodford Shale in Oklahoma, the Carthage field in East Texas, and the La Cantera field in South Louisiana. Gas production also increased at our West Cameron Block 402 well due to a successful recompletion during the fourth quarter of 2011. Partially offsetting these increases were normal production declines particularly in our Gulf Coast region.

Oil production during the year ended December 31, 2012 decreased 9% as compared to the 2011 period due primarily to continued normal production declines in our onshore Louisiana and offshore Gulf of Mexico fields. Partially offsetting these decreases were increases from the inception of production from our La Cantera field during March 2012, our Eagle Ford Shale field where five new wells commenced production during the third and fourth quarters of 2012 and at our Mississippian Lime field where initial oil production from our first wells began during the second quarter of 2012 with four additional wells beginning production during the fourth quarter. Additionally, oil production increased at our Ship Shoal field as a result of three successful recompletions performed during the fourth quarter of 2012.

Ngl production during the year ended December 31, 2012 increased 47% from the 2011 period due to the inception of production from our La Cantera field, the liquids rich portion of our Oklahoma properties, and an increase in production at our Carthage field in East Texas. These increases were partially offset by the normal production declines particularly in our Gulf Coast region.

<u>Prices</u> Including the effects of our hedges, average gas prices per Mcf for the year ended December 31, 2012 were \$2.31 as compared to \$3.22 for the 2011 period. Average oil prices per Bbl for the year ended December 31, 2012 were \$108.79 as compared to \$104.99 for the 2011 period and average Ngl prices per Mcfe were \$6.32 for the year ended December 31, 2012, as compared to \$9.51 for the 2011 period. Stated on an Mcfe basis, unit prices received during the year ended December 31, 2012 were 22% lower than the prices received during the 2011 period.

**Revenue** Including the effects of hedges, oil and gas sales during the twelve months ended December 31, 2012 decreased 12% to \$141,433,000, as compared to oil and gas sales of \$160,486,000 during the 2011 period. The decreased revenue during 2012 was primarily the result of lower natural gas and Ngl prices as well as reduced oil production during the period.

Expenses Lease operating expenses for the year ended December 31, 2012 totaled \$38,890,000 as compared to \$38,571,000 during the 2011 period. Per unit lease operating expenses totaled \$1.15 per Mcfe during the twelve month period ended December 31, 2012 as compared to \$1.28 during the 2011 period. Per unit lease operating expenses decreased primarily due to the increase in overall produced volumes during the period.

Production taxes for the year ended December 31, 2012 totaled \$885,000 as compared to \$3,100,000 during the 2011 period. The significant decrease during the 2012 period was the result of recording a receivable of \$2,717,000 during June 2012 for refunds relative to severance tax previously paid on our Oklahoma horizontal wells that we expect to receive over the next three years. Beginning in July 2012, we are no longer required to submit the full rate of Oklahoma severance tax on those wells qualifying for the horizontal tax credit.

General and administrative expenses during the year ended December 31, 2012 totaled \$22,957,000 as compared to \$20,436,000 during the 2011 period. Included in general and administrative expenses was non-cash share-based compensation expense as follows (in thousands):

	Yea	Year Ended December 31,		
	- :	2012		2011
Stock options:				
Incentive Stock Options	\$	786	\$	493
Non-Qualified Stock Options		660		703
Restricted stock		5,464		3,637
Non-cash share-based compensation	\$	6,910	\$	4,833

General and administrative expenses increased 12% during the year ended December 31, 2012 as compared to the comparable period of 2011 primarily due to increased non-cash share-based compensation expense during 2012. We capitalized \$11,925,000 of general and administrative costs during the year ended December 31, 2012 as compared to \$11,176,000 during the comparable 2011 period.

DD&A expense on oil and gas properties for the year ended December 31, 2012 totaled \$59,496,000, or \$1.75 per Mcfe, as compared to \$57,143,000, or \$1.89 per Mcfe, during the comparable 2011 period. The decrease in the per unit DD&A rate is primarily the result of a decrease in the depletable base due to the ceiling test write-downs recognized during 2012.

At December 31, 2012, the prices used in computing the estimated future net cash flows from our estimated proved reserves, including the effect of hedges in place at that date, averaged \$2.21 per Mcf of natural gas, \$102.81 per barrel of oil, and \$6.07 per Mcfe of Ngl. As a result of lower natural gas prices and their negative impact on certain of our longer-lived estimated proved reserves and estimated future net cash flows, we recognized ceiling test write-downs of \$137,100,000 during the year ended December 31, 2012. We also recognized a ceiling test write-down of \$18,907,000 during the twelve months ended December 31, 2011.

Interest expense, net of amounts capitalized on unevaluated properties, totaled \$9,808,000 during the year ended December 31, 2012, as compared to \$9,648,000 during 2011. During the year ended December 31, 2012, our capitalized interest totaled \$7,036,000 as compared to \$7,034,000 during the 2011 period.

Income tax expense (benefit) during the year ended December 31, 2012 totaled \$1,636,000, as compared to (\$1,810,000) during the 2011 period. We typically provide for income taxes at a statutory rate of 35% adjusted for permanent differences expected to be realized, primarily statutory depletion, non-deductible stock compensation expenses and state income taxes.

As a result of the ceiling test write-downs recognized, we have incurred a cumulative three-year loss. Because of the impact the cumulative loss has on the determination of the recoverability of deferred tax assets through future earnings, we assessed the realizability of our deferred tax assets based on the future reversals of existing deferred tax liabilities. Accordingly, we established a valuation allowance for a portion of our deferred tax asset. The valuation allowance was \$50,866,000 as of December 31, 2012.

# **Liquidity and Capital Resources**

We have financed our acquisition, exploration and development activities to date principally through cash flow from operations, bank borrowings, other credit facilities, issuances of equity and debt securities, joint ventures and sales of assets. At December 31, 2013, we had a working capital deficit of \$26.1 million compared to a deficit of \$31.3 million at December 31, 2012. Since we operate the majority of our drilling activities, we have the ability to reduce our capital expenditures to manage our working capital deficit and liquidity position. To the extent our capital expenditures during 2014 exceed our cash flow and cash on hand, we plan to utilize available borrowings under the bank credit facility or proceeds from the potential sale of noncore assets to fund a portion of our drilling budget.

Prices for oil and natural gas are subject to many factors beyond our control such as weather, the overall condition of the global financial markets and economies, relatively minor changes in the outlook of supply and demand, and the actions of OPEC. Oil and natural gas prices have a significant impact on our cash flows available for capital expenditures and our ability to borrow and raise additional capital. The amount we can borrow under our bank credit facility is subject to periodic re-determination based in part on changing expectations of future prices. Lower prices may also reduce the amount of oil and natural gas that we can economically produce. Lower prices and/or lower production may decrease revenues, cash flows and the borrowing base under the bank credit facility, thus reducing the amount of financial resources available to meet our capital requirements. Lower prices and reduced cash flow may also make it difficult to incur debt, including under our bank credit facility, because of the restrictive covenants in the indenture governing the Notes. See "Source of Capital: Debt" below. Our ability to comply with the covenants in our debt agreements is dependent upon the success of our exploration and development program and upon factors beyond our control, such as oil and natural gas prices.

## Source of Capital: Operations

Net cash flow from operations decreased from \$88.6 million during the year ended December 31, 2012 to \$59.9 million during the 2013 period. The decrease in operating cash flow during 2013 as compared to 2012 was primarily attributable to the decrease in our accounts payable to vendors, advances from co-owners and the increase to our revenue receivable offset by the reduction in accounts receivable from our joint partners.

# Source of Capital: Debt

On August 19, 2010, we issued \$150 million in principal amount of 10% Senior Notes due 2017 (the "Existing Notes") in a public offering. On July 3, 2013, we issued an additional \$200 million in aggregate principal amount of 10% Senior Notes due 2017. (the "New Notes" and together with the Existing Notes, the "Notes"). The New Notes were issued at a price equal to 100% of their face value plus accrued interest from March 1, 2013. The New Notes have terms that, subject to certain exceptions, are substantially identical to the Existing Notes. The net proceeds from the offering were used to finance the \$188.8 million aggregate cash purchase price of the Gulf of Mexico Acquisition, which also closed on July 3, 2013.

The Notes have numerous covenants including restrictions on liens, incurrence of indebtedness, asset sales, dividend payments and other restricted payments. Interest is payable semi-annually on March 1 and September 1. At December 31, 2013, \$11.7 million of interest had been accrued in connection with the March 1, 2014 interest payment and we were in compliance with all of the covenants contained in the Notes.

We have a Credit Agreement (as amended, the "Credit Agreement" and sometimes referred to elsewhere in this Form 10-K as our "bank credit facility") with JPMorgan Chase Bank, N.A., Wells Fargo Bank, N.A., Capital One, N.A. and IberiaBank. The Credit Agreement provides us with a \$300 million revolving credit facility that permits borrowings based on the commitments of the lenders and the available borrowing base as determined in accordance with the Credit Agreement. The Credit Agreement also allows us to use up to \$25 million of the borrowing base for letters of credit. Our bank credit facility matures on October 3, 2016. As of December 31, 2013, we had \$75.0 million of borrowings outstanding under (and no letters of credit issued pursuant to) the Credit Agreement.

The borrowing base under the Credit Agreement is based upon the valuation of the reserves attributable to our oil and gas properties as of January 1 and July 1 of each year. On July 3, 2013, the borrowing base was increased from \$150 million to \$200 million (subject to the aggregate commitments of the lenders then in effect). As of December 31, 2013, the aggregate commitments of the lenders is \$150 million and can be increased to up to \$300 million by either adding new lenders or increasing the commitments of existing lenders, subject to certain conditions. The next borrowing base redetermination is scheduled to occur by March 31, 2014. We or the lenders may request two additional borrowing base redeterminations each year. Each time the borrowing base is to be re-determined, the administrative agent under the Credit Agreement will propose a new borrowing base as it deems appropriate in its sole discretion, which must be approved by all lenders if the borrowing base is to be increased, or by lenders holding two-thirds of the amounts outstanding under the Credit Agreement if the borrowing base remains the same or is reduced.

The Credit Agreement is secured by a first priority lien on substantially all of our assets, including a lien on all equipment and at least 80% of the aggregate total value of our oil and gas properties. Outstanding balances under the Credit Agreement bear interest at the alternate base rate ("ABR") plus a margin (based on a sliding scale of 0.5% to 1.5% depending on total commitments) or the adjusted LIBO rate ("Eurodollar") plus a margin (based on a sliding scale of 1.5% to 2.5% depending on total commitments). The alternate base rate is equal to the highest of (i) the JPMorgan Chase prime rate, (ii) the Federal Funds Effective Rate plus 0.5% or (iii) the adjusted LIBO rate plus 1%. For the purposes of the definition of alternate base rate only, the adjusted LIBO rate is equal to the rate at which dollar deposits of \$5,000,000 with a one month maturity are offered by the principal London office of JPMorgan Chase Bank, N.A. in immediately available funds in the London interbank market. For all other purposes, the adjusted LIBO rate is equal to the rate at which Eurodollar deposits in the London interbank market for one, two, three or six months (as selected by us) are quoted, as adjusted for statutory reserve requirements for Eurocurrency liabilities. Outstanding letters of credit are charged a participation fee at a per annum rate equal to the margin applicable to Eurodollar loans, a fronting fee and customary administrative fees. In addition, we pay commitment fees based on a sliding scale of 0.375% to 0.5% depending on total commitments.

We are subject to certain restrictive financial covenants under the Credit Agreement, including a maximum ratio of total debt to EBITDAX, determined on a rolling four quarter basis, of 3.5 to 1.0, and a minimum ratio of consolidated current assets to consolidated current liabilities of 1.0 to 1.0, all as defined in the Credit Agreement. The Credit Agreement also includes customary restrictions with respect to debt, liens, dividends, distributions and redemptions, investments, loans and advances, nature of business, international operations and foreign subsidiaries, leases, sale or discount of receivables, mergers or consolidations, sales of properties, transactions with affiliates, negative pledge agreements, gas imbalances and swap agreements. However, the Credit Agreement permits us to repurchase up to \$10 million of our common stock during the term of the Credit Agreement, as long as

after giving effect to such repurchase our Liquidity (as defined therein) is greater than 20% of the total commitments of the lenders at such time. As of December 31, 2013, we were in compliance with all of the covenants contained in the Credit Agreement.

# Source of Capital: Issuance of Securities

Our shelf registration statement allows us to publicly offer and sell up to \$350 million of any combination of debt securities, shares of common and preferred stock, depositary shares and warrants. The registration statement does not provide any assurance that we will or could sell any such securities.

# Source of Capital: Joint Ventures

In May 2010, we entered into a joint development agreement with WSGP Gas Producing, LLC ("WSGP"), a subsidiary of NextEra Energy Resources, LLC, whereby WSGP acquired approximately 29 Bcfe of our Woodford proved undeveloped reserves as well as the right to earn 50% of our undeveloped Woodford acreage position through a two phase drilling program. We received approximately \$57.4 million in cash at closing, net of \$2.6 million in transaction fees, and an additional \$14 million in each of 2011 and 2012. In addition, since May 2010, WSGP has funded a share of our drilling costs under a drilling program, which we refer to as the drilling carry. As of December 31, 2013, approximately \$51.6 million of drilling carry remained available.

# Source of Capital: Divestitures

We do not budget property divestitures; however, we are continuously evaluating our property base to determine if there are assets in our portfolio that no longer meet our strategic objectives. From time to time we may divest certain non-strategic assets in order to provide liquidity to strengthen our balance sheet or capital to be reinvested in higher rate of return projects. We are currently exploring divestment opportunities for our Mississippian Lime and South Texas assets. We cannot assure you that we will be able to sell any of our assets in the future.

On December 31, 2012, we sold our non-operated Arkansas assets for a net cash purchase price of \$8.5 million. In January 2013, we sold 50% of our saltwater disposal systems and related surface assets in the Woodford for net proceeds of approximately \$10 million. In December 2013, we sold our non-operated Wyoming assets for a cash purchase price of \$1.0 million.

# Use of Capital: Exploration and Development

Our 2014 capital budget, which includes capitalized interest and general and administrative costs, is expected to range between \$140 million and \$150 million. Because we operate the majority of our drilling activities, we expect to be able to control the timing of a substantial portion of our capital investments. We plan to fund our capital expenditures with cash flow from operations and cash on hand. To the extent our capital expenditures during 2014 exceed our cash flow and cash on hand, we plan to utilize available borrowings under the bank credit facility or proceeds from the potential sale of non-core assets. To the extent additional capital is required, we may utilize sales of equity or debt securities or we may reduce our capital expenditures to manage our liquidity position.

# **Use of Capital: Acquisitions**

On July 3, 2013, we closed the Gulf of Mexico Acquisition for an aggregate cash purchase price of \$188.8 million. The Acquired Assets include 16 gross wells located on seven platforms.

We believe the acquisition of the Acquired Assets represents both a strategic and transformative transaction for us. This transaction builds upon our existing strategy of utilizing free cash flow from our shorter life, Gulf Coast Basin assets to develop our longer life resource assets. We plan to utilize a portion of the free cash flow generated from these acquired properties to accelerate the development of our Woodford Shale and Cotton Valley resource plays.

We do not budget acquisitions; however, we are continuously evaluating opportunities to expand our existing asset base or establish positions in new core areas.

We expect to finance our future acquisition activities, if consummated, through cash on hand or available borrowings under our bank credit facility. We may also utilize sales of equity or debt securities, sales of properties or assets or joint venture arrangements with industry partners, if necessary. We cannot assure you that such additional financings will be available on acceptable terms, if at all.

# **Contractual Obligations**

The following table summarizes our contractual obligations as of December 31, 2013 (in thousands):

	Total	2014	2015	2016	2017	2018	After 2018
10% senior notes (1)	\$ 490,000	\$ 35,000	\$ 35,000	\$ 35,000	\$385,000	\$ —	\$ —
Credit Agreement debt (1)	80,581	1,673	1,860	77,048	_	_	_
Operating leases (2)	8,005	1,384	1,452	1,414	1,312	411	2,032
Asset retirement obligations (3)	48,536	3,113	3,183	4,469	185	3,945	33,641
Purchase commitments (4)	4,563	4,563					
Total	\$ 631,685	\$ 45,733	\$ 41,495	\$ 117,931	\$386,497	\$ 4,356	\$ 35,673

- (1) Includes principal and estimated interest.
- (2) Consists primarily of leases for office space and office equipment.
- (3) Consists of estimated future obligations to abandon our oil and gas properties.
- (4) Consists of certain drilling rig and seismic contracts.

## Item 7A Quantitative and Qualitative Disclosures About Market Risk

We experience market risks primarily in two areas: interest rates and commodity prices. Because all of our properties are located within the United States, we believe that our business operations are not exposed to significant market risks relating to foreign currency exchange risk.

Our revenues are derived from the sale of our crude oil and natural gas production. Based on projected annual sales volumes for 2014, a 10% decline in the estimated average prices we expect to receive for our crude oil and natural gas production would result in an approximate \$19.7 million decline in our revenues for 2014.

We periodically seek to reduce our exposure to commodity price volatility by hedging a portion of production through commodity derivative instruments. In the settlement of a typical hedge transaction, we will have the right to receive from the counterparties to the hedge the excess of the fixed price specified in the hedge over a floating price based on a market index, multiplied by the quantity hedged. If the floating price exceeds the fixed price, we are required to pay the counterparties this difference multiplied by the quantity hedged. During the year ended December 31, 2013, we received approximately \$0.9 million from the counterparties to our derivative instruments in connection with net hedge settlements.

We are required to pay the difference between the floating price and the fixed price (when the floating price exceeds the fixed price) regardless of whether we have sufficient production to cover the quantities specified in the hedge. Significant reductions in production at times when the floating price exceeds the fixed price could require us to make payments under the hedge agreements even though such payments are not offset by sales of production. Hedging will also prevent us from receiving the full advantage of increases in oil or gas prices above the fixed amount specified in the hedge.

Our Credit Agreement requires that the counterparties to our hedge contracts be lenders under the Credit Agreement or, if not a lender under the Credit Agreement, rated A/A2 or higher by S&P or Moody's. Currently, the counterparties to our existing hedge contracts are JPMorgan Chase Bank and Wells Fargo Bank, both of whom are lenders under the Credit Agreement. To the extent we enter into additional hedge contracts, we would expect that certain of the lenders under the Credit Agreement would serve as counterparties.

As of December 31, 2013, we had entered into the following gas hedge contracts:

<b>Production Period</b>	<u>Instrument</u> <u>Type</u>	<b>Daily Volumes</b>	Weighted Average Price
Natural Gas:			
2014	Swap	40,000 Mmbtu	\$4.12
Crude Oil:			
January - June 2014	Swap (LLS)	450 Bbls	\$100.58
2014	Swap (LLS)	400 Bbls	\$101.15
2014	Swap (WTI)	350 Bbls	\$93.26

LLS - Louisiana Light Sweet

WTI - West Texas Intermediate

At December 31, 2013, we recognized a net liability of approximately \$1.1 million related to the estimated fair value of these derivative instruments. Based on estimated future commodity prices as of December 31, 2013, we would realize a \$0.7 million loss, net of taxes, as an decrease to oil and gas sales during the next 12 months. This loss is expected to be reclassified based on the schedule of gas volumes stipulated in the derivative contracts.

During January 2014, we entered into the following additional hedge contract accounted for as a cash flow hedge:

Production Period	Instrument Type	<b>Daily Volumes</b>	Weighted Average Price
Crude Oil:			
March - December 2014	Swap	5,000 Mmbtu	\$4.285

After executing the above transactions, the Company has approximately 16.1 Bcf of gas volumes, at an average price of \$4.14 per Mcf, and approximately 355,000 barrels of oil volumes at an average price of \$98.18 per barrel, hedged for 2014.

Debt outstanding under our bank credit facility is subject to a floating interest rate and represents 18% of our total debt as of December 31, 2013. Based upon an analysis, utilizing the actual interest rate in effect and balances outstanding as of December 31, 2013, and assuming a 10% increase in interest rates and no changes in the amount of debt outstanding, the potential effect on interest expense for 2013 is \$0.2 million.

# Item 8. Financial Statements and Supplementary Data

Information concerning this Item begins on page F-1.

# Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

## Item 9A. Controls and Procedures

### Evaluation of Disclosure Controls and Procedures

As of the end of the period covered by this report, the Company's management, including its Chief Executive Officer and Chief Financial Officer, carried out an evaluation of the effectiveness of the Company's disclosure controls and procedures pursuant to Rule 13a-15 of the Exchange Act. Based on that evaluation, the Chief Executive Officer and Chief Financial Officer concluded the following:

- i. that the Company's disclosure controls and procedures are designed to ensure (a) that information required to be disclosed by the Company in the reports it files or submits under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the SEC's rules and forms, and (b) that such information is accumulated and communicated to the Company's management, including the Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure; and
- ii. that the Company's disclosure controls and procedures are effective.

Notwithstanding the foregoing, there can be no assurance that the Company's disclosure controls and procedures will detect or uncover all failures of persons within the Company and its consolidated subsidiaries to disclose material information otherwise required to be set forth in the Company's periodic reports. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures.

# Changes in Internal Control Over Financial Reporting

There have been no changes in the Company's internal control over financial reporting during the quarter ended December 31, 2013 that have materially affected, or that are reasonably likely to materially affect, the Company's internal control over financial reporting.

# Management's Report on Internal Control Over Financial Reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting, and for performing an assessment of the effectiveness of internal control over financial reporting as of December 31, 2013. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Our system of internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of

records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management performed an assessment of the effectiveness of our internal control over financial reporting as of December 31, 2013 based upon criteria in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework). Based on our assessment, management believes that our internal control over financial reporting was effective as of December 31, 2013 based on these criteria.

Ernst & Young LLP, our independent registered public accounting firm, has issued their report on the effectiveness of the Company's internal control over financial reporting as of December 31, 2013.

# Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders PetroQuest Energy, Inc.

We have audited PetroQuest Energy, Inc.'s internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) (the COSO criteria). PetroQuest Energy, Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, PetroQuest Energy, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on the COSO criteria.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the accompanying consolidated balance sheets of PetroQuest Energy, Inc. as of December 31, 2013 and 2012, and the related consolidated statements of operations, comprehensive income, cash flows, and stockholders' equity for each of the three years in the period ended December 31, 2013 and our report dated March 5, 2014 expressed an unqualified opinion thereon.

# GLOSSARY OF CERTAIN OIL AND NATURAL GAS TERMS

The following is a description of the meanings of some of the oil and natural gas used in this Form 10-K.

Bbl. One stock tank barrel, or 42 U.S. gallons liquid volume, of crude oil or other liquid hydrocarbons.

Bcf. Billion cubic feet of natural gas.

*Bcfe*. Billion cubic feet equivalent, determined using the ratio of six Mcf of natural gas to one Bbl of crude oil, condensate or natural gas liquids.

*Block.* A block depicted on the Outer Continental Shelf Leasing and Official Protraction Diagrams issued by the U.S. Minerals Management Service or a similar depiction on official protraction or similar diagrams issued by a state bordering on the Gulf of Mexico.

Btu or British Thermal Unit. The quantity of heat required to raise the temperature of one pound of water by one degree Fahrenheit.

*Completion*. The installation of permanent equipment for the production of natural gas or oil, or in the case of a dry hole, the reporting of abandonment to the appropriate agency.

*Condensate*. A mixture of hydrocarbons that exists in the gaseous phase at original reservoir temperature and pressure, but that, when produced, is in the liquid phase at surface pressure and temperature.

Deterministic estimate. The method of estimating reserves or resources is called deterministic when a single value for each parameter (from the geoscience, engineering, or economic data) in the reserves calculation is used in the reserves estimation procedure.

Developed acreage. The number of acres that are allocated or assignable to productive wells or wells capable of production.

Development well. A well drilled within the proved area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive.

*Dry hole*. A well found to be incapable of producing hydrocarbons in sufficient quantities such that proceeds from the sale of such production exceed production expenses and taxes.

*Exploratory well*. A well drilled to find a new field or to find a new reservoir in a field previously found to be productive of oil or gas in another reservoir. Generally, an exploratory well is any well that is not a development well, an extension well, a service well, or a stratigraphic test well as those items are defined in this section.

Extension well. A well drilled to extend the limits of a known reservoir.

Farm-in or farm-out. An agreement under which the owner of a working interest in a natural gas and oil lease assigns the working interest or a portion of the working interest to another party who desires to drill on the leased acreage. Generally, the assignee is required to drill one or more wells in order to earn its interest in the acreage. The assignor usually retains a royalty or reversionary interest in the lease. The interest received by an assignee is a "farm-in" while the interest transferred by the assignor is a "farm-out."

*Field.* An area consisting of a single reservoir or multiple reservoirs all grouped on or related to the same individual geological structural feature and/or stratigraphic condition.

Gross acres or gross wells. The total acres or wells, as the case may be, in which a working interest is owned.

*Lead.* A specific geographic area which, based on supporting geological, geophysical or other data, is deemed to have potential for the discovery of commercial hydrocarbons.

MBbls. Thousand barrels of crude oil or other liquid hydrocarbons.

Mcf. Thousand cubic feet of natural gas.

*Mcfe*. Thousand cubic feet equivalent, determined using the ratio of six Mcf of natural gas to one Bbl of crude oil, condensate or natural gas liquids.

MMBls. Million barrels of crude oil or other liquid hydrocarbons.

MMBtu. Million British Thermal Units.

MMcf. Million cubic feet of natural gas.

*MMcfe*. Million cubic feet equivalent, determined using the ratio of six Mcf of natural gas to one Bbl of crude oil, condensate or natural gas liquids.

Ngl. Natural gas liquid.

Net acres or net wells. The sum of the fractional working interest owned in gross acres or wells, as the case may be.

Possible reserves. Those additional reserves that are less certain to be recovered than probable reserves.

*Probabilistic estimate*. The method of estimation of reserves or resources is called probabilistic when the full range of values that could reasonably occur for each unknown parameter (from the geoscience and engineering data) is used to generate a full range of possible outcomes and their associated probabilities of occurrence.

*Probable reserves*. Those additional reserves that are less certain to be recovered than proved reserves but which, together with proved reserves, are as likely as not to be recovered.

*Productive well.* A well that is found to be capable of producing hydrocarbons in sufficient quantities such that proceeds from the sale of such production exceed production expenses and taxes.

*Prospect*. A specific geographic area which, based on supporting geological, geophysical or other data and also preliminary economic analysis using reasonably anticipated prices and costs, is deemed to have potential for the discovery of commercial hydrocarbons.

Proved area. The part of a property to which proved reserves have been specifically attributed.

Proved oil and gas reserves. Those quantities of oil and gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible—from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations—prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation.

Proved properties. Properties with proved reserves.

Reasonable certainty. If deterministic methods are used, reasonable certainty means a high degree of confidence that the quantities will be recovered. If probabilistic methods are used, there should be at least a 90% probability that the quantities actually recovered will equal or exceed the estimate. A high degree of confidence exists if the quantity is much more likely to be achieved than not, and, as changes due to increased availability of geoscience (geological, geophysical, and geochemical), engineering, and economic data are made to estimated ultimate recovery (EUR) with time, reasonably certain EUR is much more likely to increase or remain constant than to decrease.

Reliable technology. A grouping of one or more technologies (including computational methods) that has been field tested and has been demonstrated to provide reasonably certain results with consistency and repeatability in the formation being evaluated or in an analogous formation.

*Reserves*. Estimated remaining quantities of oil and gas and related substances anticipated to be economically producible, as of a given date, by application of development projects to known accumulations.

*Reservoir*. A porous and permeable underground formation containing a natural accumulation of producible oil and/or gas that is confined by impermeable rock or water barriers and is individual and separate from other reservoirs.

*Resources*. Quantities of oil and gas estimated to exist in naturally occurring accumulations. A portion of the resources may be estimated to be recoverable, and another portion may be considered to be unrecoverable. Resources include both discovered and undiscovered accumulations.

Service well. A well drilled or completed for the purpose of supporting production in an existing field. Specific purposes of service wells include gas injection, water injection, steam injection, air injection, salt-water disposal, water supply for injection, observation, or injection for in-situ combustion.

Stratigraphic test well. A drilling effort, geologically directed, to obtain information pertaining to a specific geologic condition. Such wells customarily are drilled without the intent of being completed for hydrocarbon production.

Undeveloped oil and gas reserves. Undeveloped oil and gas reserves are reserves of any category that are expected to be recovered from new wells on undrilled acreage, or from existing wells where a relatively major expenditure is required for recompletion.

*Undeveloped acreage*. Lease acreage on which wells have not been drilled or completed to a point that would permit the production of commercial quantities of natural gas and oil regardless of whether such acreage contains proved reserves.

*Unproved properties*. Properties with no proved reserves

*Working interest*. The operating interest that gives the owner the right to drill, produce and conduct operating activities on the property and receive a share of production.

# **SIGNATURES**

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized, on March 5, 2014.

# Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders PetroQuest Energy, Inc.

We have audited the accompanying consolidated balance sheets of PetroQuest Energy, Inc. as of December 31, 2013 and 2012, and the related consolidated statements of operations, comprehensive income, cash flows and stockholders' equity for each of the three years in the period ended December 31, 2013. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of PetroQuest Energy, Inc. at December 31, 2013 and 2012, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2013, in conformity with U.S. generally accepted accounting principles.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), PetroQuest Energy, Inc.'s internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) and our report dated March 5, 2014 expressed an unqualified opinion thereon.

# PETROQUEST ENERGY, INC. NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

# Note 1—Organization and Summary of Significant Accounting Policies

PetroQuest Energy, Inc. (a Delaware Corporation) ("PetroQuest") is an independent oil and gas company headquartered in Lafayette, Louisiana with exploration offices in The Woodlands, Texas and Tulsa, Oklahoma. It is engaged in the exploration, development, acquisition and operation of oil and gas properties in Oklahoma and Texas as well as onshore and in the shallow waters offshore the Gulf Coast Basin.

# Principles of Consolidation

The Consolidated Financial Statements include the accounts of PetroQuest and its subsidiaries, PetroQuest Energy, L.L.C., PetroQuest Oil & Gas, L.L.C, Pittrans, Inc. and TDC Energy LLC (collectively, the "Company"). All intercompany accounts and transactions have been eliminated. Certain prior period amounts have been reclassified to conform to current year presentation.

## Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

# Oil and Gas Properties

The Company utilizes the full cost method of accounting, which involves capitalizing all acquisition, exploration and development costs incurred for the purpose of finding oil and gas reserves including the costs of drilling and equipping productive wells, dry hole costs, lease acquisition costs and delay rentals. The Company also capitalizes the portion of general and administrative costs that can be directly identified with acquisition, exploration or development of oil and gas properties. Unevaluated property costs are transferred to evaluated property costs at such time as wells are completed on the properties, the properties are sold, or management determines these costs to have been impaired. Interest is capitalized on unevaluated property costs. Transactions involving sales of reserves in place, unless significant, are recorded as adjustments to accumulated depreciation, depletion and amortization with no gain or loss recognized.

Depreciation, depletion and amortization of oil and gas properties is computed using the unit-of-production method based on estimated proved reserves. All costs associated with evaluated oil and gas properties, including an estimate of future development costs associated therewith, are included in the depreciable base. The costs of investments in unevaluated properties are excluded from this calculation until the related properties are evaluated, proved reserves are established or the properties are determined to be impaired. Proved oil and gas reserves are estimated annually by independent petroleum engineers.

The capitalized costs of proved oil and gas properties cannot exceed the present value of the estimated net future cash flows from proved reserves based on historical first of the month average twelve-month oil, gas and natural gas liquid prices, including the effect of hedges in place (the full cost ceiling). If the capitalized costs of proved oil and gas properties exceed the full cost ceiling, the Company is required to write-down the value of its oil and gas properties to the full cost ceiling amount. The Company follows the provisions of Staff Accounting Bulletin ("SAB") No. 106, regarding the application of ASC Topic 410-20 by companies following the full cost accounting method. SAB No. 106 indicates that estimated future dismantlement and abandonment costs that are recorded on the balance sheet are to be included in the costs subject to the full cost ceiling limitation. The estimated future cash outflows associated with settling the recorded asset retirement obligations should be excluded from the computation of the present value of estimated future net revenues used in applying the ceiling test.

# Cash and Cash Equivalents

The Company considers all highly liquid investments with a stated maturity of three months or less to be cash and cash equivalents. The majority of the Company's cash and cash equivalents are in overnight securities made through its commercial bank accounts, which result in available funds the next business day.

### Accounts Receivable

In its capacity as operator, the Company incurs drilling and operating costs that are billed to its partners based on their respective working interests. As of December 31, 2013 and 2012, the Company had \$0.1 million recorded related to an allowance

for doubtful accounts on its joint interest billing receivable. At December 31, 2012, \$9.2 million was recorded as an other receivable relative to net proceeds from the sale of the Company's non-operated Arkansas assets, which were collected in January 2013.

# Other Current Assets

Other current assets at December 31, 2013 and 2012 included \$3.1 million and \$0.4 million, respectively, related to an insurance receivable related to operations in our Oklahoma acreage.

# Other Property and Equipment

During 2006, the Company acquired a gas gathering system used in the transportation of natural gas. The costs related to this system are depreciated on a straight line basis over the estimated remaining useful life, generally 14 years. The costs related to other furniture and fixtures are depreciated on a straight line basis over estimated useful lives ranging from 3-8 years. During 2012, a field office servicing the Company's Oklahoma assets was built and is being depreciated over 39 years.

## Other Assets

Other assets at December 31, 2013 and 2012 included \$7.4 million and \$3.5 million, respectively, related to deferred financing costs, which are amortized over the life of the related debt. Additionally, other assets includes the long-term portion of a severance tax receivable from the state of Oklahoma, which is payable over the next 1.5 years.

# Other Accrued Liabilities

Other accrued liabilities at December 31, 2013 and 2012 included \$6.5 million and \$5.7 million, respectively, related to accrued incentive compensation costs.

# **Income Taxes**

The Company accounts for income taxes in accordance with ASC Topic 740. Provisions for income taxes include deferred taxes resulting primarily from temporary differences due to different reporting methods for oil and gas properties for financial reporting purposes and income tax purposes. For financial reporting purposes, all exploratory and development expenditures are capitalized and depreciated, depleted and amortized on the unit-of-production method. For income tax purposes, only the equipment and leasehold costs relative to successful wells are capitalized and recovered through depreciation or depletion. Generally, most other exploratory and development costs are charged to expense as incurred; however, the Company may use certain provisions of the Internal Revenue Code which allow capitalization of intangible drilling costs. Other financial and income tax reporting differences occur primarily as a result of statutory depletion. Deferred tax assets are assessed for realizabilty and a valuation allowance is established for any portion of the asset for which it is more likely than not will not be realized.

### Revenue Recognition

The Company records natural gas and oil revenue under the sales method of accounting. Under the sales method, the Company recognizes revenues based on the amount of natural gas or oil sold to purchasers, which may differ from the amounts to which the Company is entitled based on its interest in the properties. Gas balancing obligations as of December 31, 2013 and 2012 were not significant.

# **Certain Concentrations**

The Company's production is sold on month to month contracts at prevailing prices. The Company attempts to diversify its sales among multiple purchasers and obtain credit protection such as letters of credit and parental guarantees when necessary.

The following table identifies customers from whom the Company derived 10% or more of its net oil and gas revenues during the years presented. Based on the availability of other customers, the Company does not believe the loss of any of these customers would have a significant effect on its business or financial condition.

	Year l	Year Ended December 31,				
	2013	2012	2011			
Shell Trading Co.	35%	30%	18%			
Laclede Energy	14%	17%	20%			
Unimark, LLC	14%	(a)	(a)			
JP Morgan Ventures Energy	(a)	12%	(a)			
Texon LP	(a)	(a)	15%			
Gary Williams	(a)	(a)	11%			

#### (a) Less than 10 percent

#### **Derivative Instruments**

Under ASC Topic 815, the nature of a derivative instrument must be evaluated to determine if it qualifies for hedge accounting treatment. Instruments qualifying for hedge accounting treatment are recorded as an asset or liability measured at fair value and subsequent changes in fair value are recognized in stockholders' equity through other comprehensive income (loss), net of related taxes, to the extent the hedge is effective. If a hedge becomes ineffective because the hedged production does not occur, or the hedge otherwise does not qualify for hedge accounting treatment, the changes in the fair value of the derivative are recorded in the income statement as derivative income (expense). The Company does not offset fair value amounts recognized for derivative instruments. The cash settlements of hedges are recorded as adjustments to oil and gas sales. Oil and gas revenues include additions related to the net settlement of hedges totaling \$0.9 million, \$9.1 million and \$2.4 million during 2013, 2012 and 2011, respectively.

The Company's hedges are specifically referenced to NYMEX prices for oil and natural gas. The effectiveness of hedges is evaluated at the time the contracts are entered into, as well as periodically over the life of the contracts, by analyzing the correlation between NYMEX prices and the posted prices received from the designated production. Through this analysis, the Company is able to determine if a high correlation exists between the prices received for its designated production and the NYMEX prices at which the hedges will be settled. At December 31, 2013, the Company's derivative instruments were designated as effective cash flow hedges. See Note 7 for further discussion of the Company's derivative instruments.

#### Note 2—Acquisition

On July 3, 2013, the Company acquired certain shallow water Gulf of Mexico shelf oil and gas properties (the "Acquired Assets"), for an aggregate cash purchase price of \$188.8 million, reflecting an effective date of January 1, 2013 (collectively, the "Gulf of Mexico Acquisition"). The Acquired Assets included 16 gross wells located on seven platforms.

The aggregate cash purchase price of the Gulf of Mexico Acquisition was financed with the net proceeds from the sale of \$200 million in aggregate principal amount of the Company's 10% Senior Notes due 2017. The Company subsequently registered the 10% Senior Notes due 2017 in an exchange offer completed in September 2013 (the "New Notes"). The New Notes have terms that, subject to certain exceptions, are substantially identical to the Company's existing \$150 million aggregate principal amount of 10% Senior Notes due 2017. In connection with the transaction, the Company recorded \$5 million of deferred financing costs related to the New Notes and incurred \$4.0 million of acquisition-related costs, including \$2.6 million related to a bridge commitment fee, which were recognized as general and administrative expenses.

The Gulf of Mexico Acquisition is accounted for under the purchase method of accounting, which involves determining the fair value of the assets acquired and liabilities assumed. The fair value of proved and unevaluated oil and gas properties was estimated using the income approach based on estimated reserve quantities, costs to produce and develop reserves, and forward prices for oil and gas, which represent Level 2 and Level 3 inputs. Asset retirement obligations were determined in accordance with applicable accounting standards.

The following table summarizes the acquisition date fair values of the net assets acquired (in thousands):

Oil and gas properties	\$ 192,067
Unevaluated oil and gas properties	12,033
Asset retirement obligations	 (15,319)
Net assets acquired	\$ 188,781

The following unaudited summary pro forma financial information for the twelve month periods ended December 31, 2013 and 2012 has been prepared to give effect to the Gulf of Mexico Acquisition as if it had occurred on January 1, 2012. The pro forma financial information is not necessarily indicative of the results that might have occurred had the transaction taken place on January 1, 2012 and is not intended to be a projection of future results. Future results may vary significantly from the results reflected in the following unaudited pro forma financial information because of normal production declines, changes in commodity prices, future acquisitions and divestitures, future development and exploration activities and other factors. Amounts are presented in thousands, except per share amounts.

	Twelve Months Ended December 3			
	2013			2012
Revenues	\$	215,666	\$	187,104
Income (Loss) from Operations		19,858		(135,406)
Net Income (Loss) available to common stockholders		14,399		(142,181)
Basic Earnings (loss) per Share	\$	0.22	\$	(2.28)
Diluted Earnings (loss) per Share	\$	0.22	\$	(2.28)

#### **Note 3—Convertible Preferred Stock**

The Company has 1,495,000 shares of 6.875% Series B Cumulative Convertible Perpetual Preferred Stock (the "Series B Preferred Stock") outstanding.

The following is a summary of certain terms of the Series B Preferred Stock:

*Dividends*. The Series B Preferred Stock accumulates dividends at an annual rate of 6.875% for each share of Series B Preferred Stock. Dividends are cumulative from the date of first issuance and, to the extent payment of dividends is not prohibited by the Company's debt agreements, assets are legally available to pay dividends and the Company's board of directors or an authorized committee of the board declares a dividend payable, the Company pays dividends in cash, every quarter.

Mandatory conversion. The Company may, at its option, cause shares of the Series B Preferred Stock to be automatically converted at the applicable conversion rate, but only if the closing sale price of the Company's common stock for 20 trading days within a period of 30 consecutive trading days ending on the trading day immediately preceding the date the Company gives the conversion notice equals or exceeds 130% of the conversion price in effect on each such trading day.

Conversion rights. Each share of Series B Preferred Stock may be converted at any time, at the option of the holder, into 3.4433 shares of the Company's common stock (which is based on an initial conversion price of approximately \$14.52 per share of common stock, subject to adjustment) plus cash in lieu of fractional shares, subject to the Company's right to settle all or a portion of any such conversion in cash or shares of the Company's common stock. If the Company elects to settle all or any portion of its conversion obligation in cash, the conversion value and the number of shares of the Company's common stock it will deliver upon conversion (if any) will be based upon a 20 trading day averaging period.

Upon any conversion, the holder will not receive any cash payment representing accumulated and unpaid dividends on the Series B Preferred Stock, whether or not in arrears, except in limited circumstances. The conversion rate is equal to \$50 divided by the conversion price at the time. The conversion price is subject to adjustment upon the occurrence of certain events. The conversion price on the conversion date and the number of shares of the Company's common stock, as applicable, to be delivered upon conversion may be adjusted if certain events occur.

#### Note 4—Earnings Per Share

A reconciliation between the basic and diluted earnings per share computations (in thousands, except per share amounts) is as follows:

For the Year Ended December 31, 2013	Income (Nume		Shares (Denominator)	Per Share Amount	
Net income available to common stockholders	\$	8,943	63,054		
Attributable to participating securities		(257)	_		
BASIC EPS	\$	8,686	63,054	\$	0.14
	1				
Net income available to common stockholders	\$	8,943	63,054		
Effect of dilutive securities:					
Stock options		_	154		
Attributable to participating securities		(256)	_		
DILUTED EPS	\$	8,687	63,208	\$	0.14
For the Year Ended December 31, 2012	Loss (Nume	rator)	Shares (Denominator)	Per Share Amount	
BASIC EPS					
Net loss available to common stockholders	\$	(137,218)	62,459	\$	(2.20)
Effect of dilutive securities:					
Stock options		_	_		
Restricted stock					
DILUTED EPS	\$	(137,218)	62,459	\$	(2.20)
For the Year Ended December 31, 2011	Income (Nume		Shares (Denominator)	Per Share Amount	
Net income available to common stockholders	\$	5,409	61,937		
Attributable to participating securities		(154)	<del></del>		
BASIC EPS	\$	5,255	61,937	\$	0.08
				-	
Net income available to common stockholders	\$	5,409	61,937		
Effect of dilutive securities:					
Stock options		_	388		
Attributable to participating securities		(153)	<u> </u>		
DILUTED EPS	\$	5,256	62,325	\$	0.08

Common shares issuable upon the assumed conversion of the Series B Preferred Stock totaling 5.1 million shares during 2013 and 2011 were not included in the computation of diluted earnings per share because the inclusion would have been anti-dilutive. Options to purchase 1.2 million and 0.1 million shares of common stock were outstanding during the year ended December 31, 2013 and 2011, respectively, and were not included in the computation of diluted earnings per share because the options' exercise prices were in excess of the average market price of the common shares.

An aggregate of 0.9 million shares of common stock representing options to purchase common stock and unvested shares of restricted common stock and common shares issuable upon the assumed conversion of the Series B Preferred Stock totaling 5.1 million shares were not included in the computation of diluted earnings per share for the year ended December 31, 2012, because the inclusion would have been anti-dilutive as a result of the net loss reported for the period.

#### **Note 5—Share-Based Compensation**

Share-based compensation expense is reflected as a component of the Company's general and administrative expense. A detail of share-based compensation expense for the periods ended December 31, 2013, 2012 and 2011 is as follows (in thousands):

	Year Ended December 31,				
	 2013		2012		2011
Stock options:					
Incentive Stock Options	\$ 310	\$	786	\$	493
Non-Qualified Stock Options	222		660		703
Restricted stock	3,684		5,464		3,637
Restricted stock units	1,611		277		_
Share-based compensation	\$ 5,827	\$	7,187	\$	4,833

During the years ended December 31, 2013, 2012 and 2011, the Company recorded income tax benefits of approximately \$1.8 million, \$2.3 million and \$1.6 million, respectively, related to share-based compensation expense recognized during those periods. Any excess tax benefits from the vesting of restricted stock and the exercise of stock options will not be recognized in paid-in capital until the Company is in a current tax paying position. Presently, all of the Company's income taxes are deferred and the Company has net operating losses available to carryover to future periods. Accordingly, no excess tax benefits have been recognized for any periods presented.

At December 31, 2013, the Company had \$6.8 million of unrecognized compensation cost related to unvested restricted stock and stock options. This amount will be recognized as compensation expense over a weighted average period of approximately three years.

#### Stock Options

Stock options generally vest equally over a three-year period, must be exercised within 10 years of the grant date and may be granted only to employees, directors and consultants. The exercise price of each option may not be less than 100% of the fair market value of a share of common stock on the date of grant. Upon a change in control of the Company, all outstanding options become immediately exercisable.

The Company computes the fair value of its stock options using the Black-Scholes option-pricing model assuming a stock option forfeiture rate and expected term based on historical activity and expected volatility computed using historical stock price fluctuations on a weekly basis for a period of time equal to the expected term of the option. The Company recognizes compensation expense using the accelerated expense attribution method over the vesting period. Periodically, the Company adjusts compensation expense based on the difference between actual and estimated forfeitures.

The following table outlines the assumptions used in computing the fair value of stock options granted during 2013, 2012 and 2011:

	Years Ended December 31,				
	2013	2012	2011		
Dividend yield	%	%	%		
Expected volatility	79.6% - 79.8%	79.2% - 79.6%	78.5% - 79.7%		
Risk-free rate	0.9% - 1.815%	0.8% - 1.1%	1.1% - 2.2%		
Expected term	6 years	6 years	6 years		
Forfeiture rate	5.0%	5.0%	5.0%		
Stock options granted (1)	395,642	2 125,487	395,280		
Wgtd. avg. grant date fair value per share	\$ 2.93	1 \$ 3.71	\$ 5.09		
Fair value of grants (1)	\$ 1,150,000	\$ 465,000	\$ 2,011,000		

### (1) Prior to applying estimated forfeiture rate

The following table details stock option activity during the year ended December 31, 2013:

	Number of Options	Wgtd. A		Wgtd. Avg. Remaining Life	Intr	ggregate insic Value (000's)
Outstanding at beginning of year	1,924,941	\$	5.61			
Granted	395,642		4.22			
Expired/cancelled/forfeited	(120,090)		7.22			
Exercised	(308,000)		2.81			
Outstanding at end of year	1,892,493		5.67	5.8 years	\$	360
Options exercisable at end of year	1,317,795	\$	5.99	4.3 years	\$	324
Options expected to vest	545,963		4.95	9.1 years	\$	34

The total fair value of stock options that vested during the years ended December 31, 2013, 2012 and 2011 was \$0.8 million, \$1.7 million and \$1.1 million, respectively. The intrinsic value of stock options exercised was immaterial for all periods presented.

The following table summarizes information regarding stock options outstanding at December 31, 2013:

Range of Exercise	Options Outstanding	Wgtd. Avg. Remaining	Wgtd. Avg. Exercise	Options Exercisable	Wgtd. Avg. Exercise
Price	12/31/2013	<b>Contractual Life</b>	Price	12/31/2013	Price
\$2.24—\$4.48	684,141	5.4 years	\$3.75	316,499	\$3.26
\$4.48—\$6.72	389,320	5.1 years	\$5.64	275,997	\$5.78
\$6.72—\$8.96	809,032	6.5 years	\$7.26	715,299	\$7.22
\$8.96—\$11.20	10,000	2.1 years	\$9.99	10,000	\$9.99
	1,892,493	5.8 years	\$5.67	1,317,795	\$5.99

#### Restricted Stock

The Company computes the fair value of its service based restricted stock using the closing price of the Company's stock at the date of grant, and compensation expense is recognized assuming a 5% estimated forfeiture rate. Restricted stock granted to employees prior to 2011 generally vests over a five-year period with one-fourth vesting on each of the first, second, third and fifth anniversaries of the date of the grant. No portion of the restricted stock vests on the fourth anniversary of the date of the grant. Prior to 2013, restricted stock granted to directors generally vested evenly over a three year period. In 2013, restricted stock granted to directors vests one year from the date of grant, to align with their term on the board. Beginning January 1, 2011, restricted stock granted to employees generally vests evenly over a three year period. Upon a change in control of the Company, all outstanding shares of restricted stock will become immediately vested. Compensation expense related to restricted stock is recognized over the vesting period using the accelerated expense attribution method.

The following table details restricted stock activity during 2013:

	Number of Shares	Wgtd. Avg. Fair Value po Share	
Outstanding at beginning of year	1,805,829	\$ 6	5.28
Granted	1,078,000	4	1.18
Expired/cancelled/forfeited	(186,926)	5	5.85
Lapse of restrictions	(770,452)	$\epsilon$	5.95
Outstanding at December 31, 2013	1,926,451	\$ 4	1.88

The weighted average grant date fair value of restricted stock granted during the years ended December 31, 2013, 2012 and 2011 was \$4.18, \$5.24 and \$7.54, respectively, per share. The total fair value of restricted stock that vested during the years ended December 31, 2013, 2012 and 2011 was \$5.4 million, \$4.7 million and \$5.6 million, respectively. At December 31, 2013, the weighted average remaining life of restricted stock outstanding was two years and the intrinsic value of restricted stock outstanding, using the closing stock price on December 31, 2013, was \$8.3 million.

#### Restricted Stock Units

The Company granted restricted stock units ("RSUs") to employees during 2013 and 2012. The RSUs vest in one-third increments on each of the first, second and third anniversaries of the date of grant. Cash payment will be made to employees on each vesting date based upon the Company's closing stock price on that date. Upon change in control of the Company, all of the RSUs will immediately vest. Compensation expense is recognized on a straight line basis over the vesting period assuming a 5% estimated forfeiture rate. The Company computes the fair value of the RSUs using the closing price of the Company's stock for purposes of determining the amount of the liability at the end of each period. During 2013 the Company paid \$1.6 million for units that vested during the period. As of December 31, 2013, the Company had a liability for RSUs outstanding and expected to vest in the amount of \$0.3 million and an intrinsic value on all RSUs outstanding of \$5.5 million.

	Number of Shares
Outstanding at beginning of year	1,096,158
Granted	703,777
Expired/Cancelled/Forfeited	(141,378)
Vested/Paid	(385,140)
Outstanding at December 31, 2013	1,273,417

#### Note 6—Asset Retirement Obligation

The Company accounts for asset retirement obligations in accordance with ASC Topic 410-20, which requires recording the fair value of an asset retirement obligation associated with tangible long-lived assets in the period incurred. Asset retirement obligations associated with long-lived assets included within the scope of ASC Topic 410-20 are those for which there is a legal obligation to settle under existing or enacted law, statute, written or oral contract or by legal construction under the doctrine of promissory estoppel. The Company has legal obligations to plug, abandon and dismantle existing wells and facilities that it has acquired and constructed.

The following table describes all changes to the Company's asset retirement obligation liability (in thousands):

	Year Ended December 3		ember 31,	
		2013		2012
Asset retirement obligation, beginning of period	\$	27,260	\$	30,427
Liabilities assumed		15,319		_
Liabilities incurred		498		892
Liabilities settled		(3,335)		(2,627)
Accretion expense		1,753		2,078
Revisions in estimated cash flows		7,041		(3,510)
Asset retirement obligation, end of period		48,536		27,260
Less: current portion of asset retirement obligation		(3,113)		(2,351)
Long-term asset retirement obligation	\$	45,423	\$	24,909

#### **Note 7—Derivative Instruments**

The Company seeks to reduce its exposure to commodity price volatility by hedging a portion of its production through commodity derivative instruments. When the conditions for hedge accounting are met, the Company may designate its commodity derivatives as cash flow hedges. The changes in fair value of derivative instruments that qualify for hedge accounting treatment are recorded in other comprehensive income (loss) until the hedged oil, natural gas or natural gas liquids (Ngl) quantities are produced. If a hedge becomes ineffective because the hedged production does not occur, or the hedge otherwise does not qualify for hedge accounting treatment, the changes in the fair value of the derivative are recorded in the income statement as derivative income (expense). At December 31, 2013, the Company designated all of its derivative instruments as effective cash flow hedges. At December 31, 2012, the Company designated all derivative instruments except its three-way collar as effective cash flow hedges.

Oil and gas sales include additions (reductions) related to the settlement of gas hedges of \$1,098,000, \$6,846,000 and \$2,609,000, Ngl hedges of \$61,000, \$722,000 and zero, and oil hedges of (\$232,000), \$1,529,000 and (\$192,000), for the years ended December 31, 2013, 2012 and 2011, respectively.

As of December 31, 2013, the Company had entered into the following gas hedge contracts:

Production Period	Instrument Type	Daily Volumes	Weighted Average Price
Natural Gas:	·		
2014	Swap	40,000 Mmbtu	\$4.12
Crude Oil:			
January - June 2014	Swap (LLS)	450 Bbls	\$100.58
2014	Swap (LLS)	400 Bbls	\$101.15
2014	Swap (WTI)	350 Bbls	\$93.26

LLS - Louisiana Light Sweet

WTI - West Texas Intermediate

At December 31, 2013, the Company had recognized a net liability of approximately \$1.1 million related to the estimated fair value of these derivative instruments. Based on estimated future commodity prices as of December 31, 2013, the Company would realize a \$0.7 million loss, net of taxes, during the next 12 months. These losses are expected to be reclassified to oil and gas sales based on the schedule of oil and gas volumes stipulated in the derivative contracts.

During January 2014, the Company entered into the following additional hedge contract accounted for as a cash flow hedge:

<b>Production Period</b>	Instrument Type	Daily Volumes	Weighted Average Price
Natural Gas:			
March - December 2014	Swap	5,000 Mmbtu	\$4.285

#### Derivatives designated as hedging instruments:

The following tables reflect the fair value of the Company's effective cash flow hedges in the consolidated financial statements (in thousands):

Effect of Cash Flow Hedges on the Consolidated Balance Sheet at December 31, 2013 and December 31, 2012:

	Commodity Derivatives		
<u>Period</u>	Balance Sheet Location		Fair Value
December 31, 2013	Derivative asset	\$	521
December 31, 2013	Derivative liability	\$	(1,617)
December 31, 2012	Derivative asset	\$	830

Effect of Cash Flow Hedges on the Consolidated Statement of Operations for the twelve months ended December 31, 2013, 2012 and 2011:

<u>Instrument</u>	Recogniz	f Gain (Loss) ged in Other nsive Income	Location of Gain Reclassified into Income		Amount of Gain Reclassified into Income
Commodity Derivatives at December 31, 2013	\$	(1,617)	Oil and gas sales	\$	994
Commodity Derivatives at December 31, 2012	\$	(3,510)	Oil and gas sales	\$	9,097
Commodity Derivatives at December 31, 2011	\$	5,120	Oil and gas sales	\$	2,417

#### **Derivatives not designated as hedging instruments:**

The Company's three-way collar contract for 2013 gas production was not designated as an effective cash flow hedge and therefore both realized and unrealized (mark-to-market) gains or losses on this derivative were recorded as derivative expense (income) in the statement of operations. The following tables reflect the fair value of this contract in the consolidated financial statements (in thousands):

Effect of Non-designated Derivative Instrument on the Consolidated Balance Sheet at December 31, 2012:

	Commodity Derivatives					
Period	Balance Sheet Location		Fair Value			
December 31, 2012	Derivative liability	\$	(23	33)		

Effect of Non-designated Derivative Instrument on the Consolidated Statement of Operations for the twelve months ended December 31, 2013, 2012 and 2011:

<u>Instrument</u>	Amount of Gain (Loss) Recognized in Derivative Income (Expense)
Commodity Derivatives at December 31, 2013	\$ 233
Commodity Derivatives at December 31, 2012	\$ (233)
Commodity Derivatives at December 31, 2011	\$ _

#### **Note 8 - Fair Value Measurements**

ASC Topic 820 defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date and establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. As presented in the tables below, this hierarchy consists of three broad levels:

- Level 1: valuations consist of unadjusted quoted prices in active markets for identical assets and liabilities and has the highest priority;
- Level 2: valuations rely on quoted prices in markets that are not active or observable inputs over the full term of the asset or liability;
- Level 3: valuations are based on prices or third party or internal valuation models that require inputs that are significant to the fair value measurement and are less observable and thus have the lowest priority.

The Company classifies its commodity derivatives based upon the data used to determine fair value. The Company's derivative instruments at December 31, 2013 were in the form of swaps based on NYMEX pricing for oil and natural gas. The fair value of these derivatives is derived using an independent third-party's valuation model that utilizes market-corroborated inputs that are observable over the term of the derivative contract. The Company's fair value calculations also incorporate an estimate of the counterparties' default risk for derivative assets and an estimate of the Company's default risk for derivative liabilities. As a result, the Company designates its commodity derivatives as Level 2 in the fair value hierarchy.

The following table summarizes the Company's assets (liabilities) that are subject to fair value measurement on a recurring basis as of December 31, 2013 and December 31, 2012 (in thousands):

<u>Instrument</u>	in A	Quoted Prices in Active Markets (Level 1)		in Active Observable		Observable	Unobserva	
Commodity Derivatives:								
At December 31, 2013	\$	_	\$	(1,096)	\$	_		
At December 31, 2012	\$	_	\$	597	\$	_		

The fair value of the Company's cash and cash equivalents and variable-rate bank debt approximated book value at December 31, 2013 and 2012. As of December 31, 2013, the fair value of the Company's \$350 million 10% Senior Notes due 2017 (the "Notes") was approximately \$364.0 million. As of December 31, 2012, the fair value of the Company's \$150 million in principal amount of Notes was approximately \$155.3 million. The fair value of the Notes was determined based upon a market quote provided by an independent broker, which represents a Level 2 input.

#### Note 9—Long-Term Debt

On August 19, 2010, PetroQuest issued \$150 million in principal amount of Notes (the "Existing Notes") in a public offering. On July 3, 2013, PetroQuest issued an additional \$200 million in aggregate principal amount of Notes. PetroQuest subsequently registered the Notes in an exchange offer completed in September 2013 (the "New Notes" and together with the Existing Notes, the "Notes"). The New Notes were issued at a price equal to 100% of their face value plus accrued interest from March 1, 2013. The New Notes have terms that, subject to certain exceptions, are substantially identical to the Existing Notes. The net proceeds from the offering were used to finance the \$188.8 million aggregate cash purchase price of the Gulf of Mexico Acquisition, which also closed on July 3, 2013. The Notes are guaranteed by certain of PetroQuest's subsidiaries. The subsidiary guarantors are 100% owned by PetroQuest and all guarantees are full and unconditional and joint and several. PetroQuest has no independent assets or operations and the subsidiaries not providing guarantees are minor, as defined by the rules of the Securities and Exchange Commission.

The Notes have numerous covenants including restrictions on liens, incurrence of indebtedness, asset sales, dividend payments and other restricted payments. Interest is payable semi-annually on March 1 and September 1. At December 31, 2013, \$11.7 million had been accrued in connection with the March 1, 2014 interest payment and the Company was in compliance with all of the covenants contained in the Notes.

The Company and PetroQuest Energy, L.L.C. (the "Borrower") have a Credit Agreement (as amended, the "Credit Agreement") with JPMorgan Chase Bank, N.A., Wells Fargo Bank, N.A., Capital One, N.A. and IberiaBank. The Credit Agreement provides the Borrower with a \$300 million revolving credit facility that permits borrowings based on the commitments of the lenders and the available borrowing base as determined in accordance with the Credit Agreement. The Credit Agreement also allows the Borrower to use up to \$25 million of the borrowing base for letters of credit. The credit facility matures on October 3, 2016. As of December 31, 2013, the Borrower had \$75.0 million of borrowings outstanding under (and no letters of credit issued pursuant to) the Credit Agreement.

The borrowing base under the Credit Agreement is based upon the valuation of the reserves attributable to the Borrower's oil and gas properties as of January 1 and July 1 of each year. On July 3, 2013 the borrowing base was increased from \$150 million to \$200 million (subject to the aggregate commitments of the lenders then in effect). As of December 31, 2013, the aggregate commitments of the lenders is \$150 million and can be increased to up to \$300 million by either adding new lenders or increasing the commitments of existing lenders, subject to certain conditions. The next borrowing base redetermination is scheduled to occur by March 31, 2014. The Borrower or the lenders may request two additional borrowing base redeterminations each year. Each time the borrowing base is to be re-determined, the administrative agent under the Credit Agreement will propose a new borrowing base as it deems appropriate in its sole discretion, which must be approved by all lenders if the borrowing base is to be increased, or by lenders holding two-thirds of the amounts outstanding under the Credit Agreement if the borrowing base remains the same or is reduced.

The Credit Agreement is secured by a first priority lien on substantially all of the assets of the Company and its subsidiaries, including a lien on all equipment and at least 80% of the aggregate total value of the Borrower's oil and gas properties. Outstanding balances under the Credit Agreement bear interest at the alternate base rate ("ABR") plus a margin (based on a sliding scale of 0.5% to 1.5% depending on total commitments) or the adjusted LIBO rate ("Eurodollar") plus a margin (based on a sliding scale of 1.5% to 2.5% depending on total commitments). The alternate base rate is equal to the highest of (i) the JPMorgan Chase prime rate, (ii) the Federal Funds Effective Rate plus 0.5% or (iii) the adjusted LIBO rate plus 1%. For the purposes of the definition of alternative base rate only, the adjusted LIBO rate is equal to the rate at which dollar deposits of \$5,000,000 with a one month

maturity are offered by the principal London office of JPMorgan Chase Bank, N.A. in immediately available funds in the London interbank market. For all other purposes, the adjusted LIBO rate is equal to the rate at which Eurodollar deposits in the London interbank market for one, two, three or six months (as selected by the Borrower) are quoted, as adjusted for statutory reserve requirements for Eurocurrency liabilities. Outstanding letters of credit are charged a participation fee at a per annum rate equal to the margin applicable to Eurodollar loans, a fronting fee and customary administrative fees. In addition, the Borrower pays commitment fees based on a sliding scale of 0.375% to 0.5% depending on total commitments.

The Company and its subsidiaries are subject to certain restrictive financial covenants under the Credit Agreement, including a maximum ratio of total debt to EBITDAX, determined on a rolling four quarter basis, of 3.5 to 1.0, and a minimum ratio of consolidated current assets to consolidated current liabilities of 1.0 to 1.0, all as defined in the Credit Agreement. The Credit Agreement also includes customary restrictions with respect to debt, liens, dividends, distributions and redemptions, investments, loans and advances, nature of business, international operations and foreign subsidiaries, leases, sale or discount of receivables, mergers or consolidations, sales of properties, transactions with affiliates, negative pledge agreements, gas imbalances and swap agreements. However, the Credit Agreement permits the Borrower to repurchase up to \$10 million of the Company's common stock during the term of the Credit Agreement, as long as after giving effect to such repurchase the Borrower's Liquidity (as defined therein) is greater than 20% of the total commitments of the lenders at such time. As of December 31, 2013, the Borrower was in compliance with all of the covenants contained in the Credit Agreement.

#### **Note 10—Related Party Transactions**

Two of the Company's senior officers, Charles T. Goodson and Stephen H. Green, or their affiliates, are working interest owners and overriding royalty interest owners and E. Wayne Nordberg and William W. Rucks, IV, two of the Company's directors, are working interest owners in certain properties operated by the Company or in which the Company also holds a working interest. As working interest owners, they are required to pay their proportionate share of all costs and are entitled to receive their proportionate share of revenues in the normal course of business. As overriding royalty interest owners, they are entitled to receive their proportionate share of revenues in the normal course of business.

During 2013, in their capacities as working interest owners or overriding royalty interest owners, revenues, net of costs, were disbursed to Messrs. Goodson and Green, or their affiliates, in the amounts of \$92,000 and \$269,000, respectively, and with respect to Mr. Nordberg, costs billed exceeded revenues disbursed in the amount of \$200. During 2012, in their capacities as working interest owners or overriding royalty interest owners, revenues, net of costs, were disbursed to Messrs. Goodson, Green and Nordberg, or their affiliates, in the amounts of \$104,000, \$387,000 and \$100, respectively. During 2011, in their capacities as working interest owners or overriding royalty interest owners, revenues, net of costs, were disbursed to Messrs. Goodson and Green, or their affiliates, in the amounts of \$293,000, \$546,000, respectively, and with respect to Mr. Nordberg, costs billed exceeded revenues in the amount of \$9. No such disbursements were made to Mr. Rucks during any reported period. With respect to Mr. Goodson, gross revenues attributable to interests, properties or participation rights held by him prior to joining the Company as an officer and director on September 1, 1998 represent all of the gross revenue received by him during these periods.

In its capacity as operator, the Company incurs drilling and operating costs that are billed to its partners based on their respective working interests. At December 31, 2013, the Company's joint interest billing receivable included approximately \$19,000 from the related parties discussed above or their affiliates, attributable to their share of costs. This represents less than 1% of the Company's total joint interest billing receivable at December 31, 2013.

Periodically, the Company charters private aircraft for business purposes. During 2012 and 2011, the Company paid approximately \$16,900 and \$128,200, respectively, to a third party operator in connection with the Company's use of flight hours owned by Charles T. Goodson through a fractional ownership arrangement with the third party operator. These amounts represent the cost of the hours purchased by Mr. Goodson. No such amounts were incurred during 2013. The Company's use of flight hours purchased by Mr. Goodson was pre-approved by the Company's Audit Committee and there is no agreement or obligation by or on behalf of the Company to utilize this aircraft arrangement.

#### Note 11—Ceiling Test Write-downs

As a result of lower natural gas prices and their negative impact on certain of the Company's longer-lived estimated proved reserves and estimated future net cash flows, the Company recognized ceiling test write-downs of \$137.1 million and \$18.9 million during 2012 and 2011, respectively. No such write-down occurred during 2013. At December 31, 2012, the prices used in computing the estimated future net cash flows from the Company's estimated proved reserves, including the effect of hedges in place at that date, averaged \$2.21 per Mcf of natural gas, \$102.81 per barrel of oil and \$6.07 per Mcfe of Ngl. The Company's cash flow hedges in place decreased the ceiling test write-down by approximately \$2.2 million and \$3.9 million during 2012 and 2011, respectively.

#### Note 12—Other Comprehensive Income

The following table represents the changes in accumulated other comprehensive income (loss), net of tax, for the year ended December 31, 2013 (in thousands):

	Gains and on Cash Hed	n Flow	Change in Valuation Allowance	Total
Balance as of December 31, 2012	\$	521	\$ _	\$ 521
Other comprehensive loss before reclassifications		(585)	(408)	(993)
Amounts reclassified from accumulated other comprehensive income		(624)	 <u> </u>	 (624)
Net other comprehensive loss		(1,209)	(408)	(1,617)
Balance as of December 31, 2013	\$	(688)	\$ (408)	\$ (1,096)

Refer to Note 7 - Derivative Instruments for additional details about the effect of the above reclassifications.

### Note 13—Investment in Oil and Gas Properties—Unaudited

The following tables disclose certain financial data relative to the Company's oil and gas producing activities, which are located onshore and offshore in the continental United States:

Costs Incurred in Oil and Gas Property Acquisition, Exploration and Development Activities (amounts in thousands)

	For the Year-Ended December 31,					ber 31,
	2013			2012		2011
Acquisition costs:						
Proved (1)	\$	177,880	\$	352	\$	2,720
Unproved (1)		35,008		15,677		43,207
Divestitures—unproved (2)		(487)		(8,889)		(14,461)
Exploration costs:						
Proved		34,344		72,361		92,466
Unproved		20,112		18,033		5,919
Development costs		41,328		18,740		34,400
Capitalized general and administrative and interest costs		19,911		18,961		18,210
Total costs incurred	\$	328,096	\$	135,235	\$	182,461

	For the Year-Ended December 31,							
	2013			2012		2011		
Accumulated depreciation, depletion and amortization (DD&A)								
Balance, beginning of year	\$	(1,472,244)	\$	(1,265,603)	\$	(1,175,553)		
Provision for DD&A		(69,357)		(59,496)		(57,143)		
Ceiling test writedown		_		(137,100)		(18,907)		
Sale of proved properties and other (3)		(11,443)		(10,045)		(14,000)		
Balance, end of year	\$	(1,553,044)	\$	(1,472,244)	\$	(1,265,603)		
DD&A per Mcfe	\$	1.82	\$	1.75	\$	1.89		

- (1) During 2013, the Company closed on the Gulf of Mexico Acquisition for an aggregate cash purchase price of \$188.8 million (see Note 2 Acquisition). Additionally, the Company acquired 13,500 net unevaluated acres in Oklahoma targeting the Woodford Shale.
- (2) During 2012, the Company sold an additional portion of its Mississippian Lime acreage for \$6.1 million. During 2011, the Company sold a portion of its unproved Mississippian Lime acreage for \$14.5 million.
- (3) During 2013, the Company sold 50% of its saltwater disposal systems and related surface assets in the Woodford for net proceeds of approximately \$10.4 million. and its non-operated Wyoming assets for a cash purchase price of \$1.0 million. During 2012, the Company sold its non-operated Arkansas assets for a net cash purchase price of \$8.5 million. During 2011, the Company received an additional \$14 million payment associated with the achievement of certain production metrics stipulated under the joint development agreement.

At December 31, 2013 and 2012, unevaluated oil and gas properties totaled \$98.4 million and \$71.7 million, respectively, and were not subject to depletion. Unevaluated costs at December 31, 2013 included \$11.3 million of costs related to 19 exploratory wells in progress at year-end. These costs are expected to be transferred to evaluated oil and gas properties during 2014 upon the completion of drilling. At December 31, 2012, unevaluated costs included \$12.7 million related to 17 exploratory wells in progress. All of these costs were transferred to evaluated oil and gas properties during 2013. The Company capitalized \$6.6 million, \$7.0 million and \$7.0 million of interest during 2013, 2012 and 2011, respectively. Of the total unevaluated oil and gas property costs of \$98.4 million at December 31, 2013, \$50.3 million, or 51%, was incurred in 2013, \$12.1 million, or 12%, was incurred in 2012 and \$36.0 million, or 37%, was incurred in prior years. The Company expects that the majority of the unevaluated costs at December 31, 2013 will be evaluated within the next three years, including \$34.4 million that the Company expects to be evaluated during 2014.

#### Note 14—Income Taxes

The Company typically provides for income taxes at a statutory rate of 35% adjusted for permanent differences expected to be realized, primarily statutory depletion, non-deductible stock compensation expenses and state income taxes. As a result of the ceiling test write-downs recognized during 2011 and 2012, the Company incurred a cumulative three-year loss. Because of the impact the cumulative loss had on the determination of the recoverability of deferred tax assets through future earnings, the Company assessed the realizability of its deferred tax assets based on the future reversals of existing deferred tax liabilities. Accordingly, the Company established a valuation allowance of \$45.5 million as of December 31, 2013.

An analysis of the Company's deferred taxes follows (amounts in thousands):

	December 31,							
	2	2013		2012		2011		
Net operating loss carryforwards	\$	21,810	\$	16,641	\$	2,409		
Percentage depletion carryforward		8,645		7,317		6,103		
Alternative minimum tax credits		784		784		784		
Contributions carryforward and other		189		156		130		
Temporary differences:								
Oil and gas properties		(7,248)		12,575		(21,860)		
Asset retirement obligation		18,056		10,141		11,319		
Derivatives		408		(222)		(2,388)		
Share-based compensation		2,887		3,474		2,952		
Valuation allowance		(45,531)		(50,866)				
Deferred tax liability	\$		\$		\$	(551)		

At December 31, 2013, the Company had approximately \$70.7 million of operating loss carryforwards, of which \$12.1 million relates to excess tax benefits with respect to share-based compensation that have not been recognized in the financial statements. If not utilized, approximately \$8.7 million of such carryforwards would expire in 2025 and the remainder would expire by the year 2033. The Company has available for tax reporting purposes \$24.7 million in statutory depletion deductions that may be carried forward indefinitely.

Income tax expense (benefit) for each of the years ended December 31, 2013, 2012 and 2011 was different than the amount computed using the Federal statutory rate (35%) for the following reasons (amounts in thousands):

	For the Year Ended December 31,						
	<u>2013</u>		<u>2012</u>	<u>2011</u>			
Amount computed using the statutory rate	\$ 5,041	\$	(45,655)	\$	3,058		
Increase (reduction) in taxes resulting from:							
State & local taxes	317		(2,870)		192		
Percentage depletion carryforward	(1,323)		(1,309)		(2,507)		
Allowance for alternative minimum tax	_		_		8		
Non-deductible stock option expense (1)	115		292		183		
Share-based compensation (2)	780		9		346		
Other	1,132		303		(300)		
Change in valuation allowance	(5,742)		50,866		(2,790)		
Income tax expense (benefit)	\$ 320	\$	1,636	\$	(1,810)		

- (1) Relates to compensation expense recognized on the vesting of Incentive Stock Options.
- (2) Relates to the write-off of deferred tax assets associated with share based compensation that will not be recognized for tax purposes.

#### Note 15—Commitments and Contingencies

The Company is a party to ongoing litigation in the normal course of business. While the outcome of lawsuits or other proceedings against the Company cannot be predicted with certainty, management believes that the effect on its financial condition, results of operations and cash flows, if any, will not be material. At December 31, 2010, the Company had accrued \$2.3 million in connection with estimated liabilities related to certain legal matters. All of these matters were settled during 2011, which resulted in an additional charge of \$1.4 million included in other expense for the year ended December 31, 2011.

#### **Lease Commitments**

The Company has operating leases for office space and equipment, which expire on various dates through 2018. Future minimum lease commitments as of December 31, 2013 under these operating leases are as follows (in thousands):

2014	\$ 1,384
2015	1,452
2016	1,414
2017	1,312
2018	411
Thereafter	 2,032
	\$ 8,005

Total rent expense under operating leases was approximately \$1.4 million, \$1.4 million and \$1.3 million in 2013, 2012 and 2011, respectively.

#### Note 16—Oil and Gas Reserve Information—Unaudited

The Company's net proved oil and gas reserves at December 31, 2013 have been estimated by independent petroleum engineers in accordance with guidelines established by the SEC using a historical 12-month average pricing assumption.

The estimates of proved oil and gas reserves constitute those quantities of oil, gas, and natural gas liquids, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible—from a given date forward, from known reservoirs, and under existing economic conditions, operating methods, and government regulations—prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain, regardless of whether deterministic or probabilistic methods are used for the estimation. However, there are numerous uncertainties inherent in estimating quantities of proved reserves and in providing the future rates of production and timing of development expenditures. The following reserve data represents estimates only and should not be construed as being

exact. In addition, the present values should not be construed as the current market value of the Company's oil and gas properties or the cost that would be incurred to obtain equivalent reserves.

During 2013, the Company's estimated proved reserves increased by 32%. This increase was primarily due to the Gulf of Mexico Acquisition, the success of the Company's drilling programs and approximately 33 Bcfe of PUD reserves added as a result of the increase in the historical 12-month average price per Mcf of natural gas used to calculate estimated proved reserves. In total, the Company added approximately 63 Bcfe of proved reserves in Oklahoma, 41 Bcfe in the Gulf Coast and 6 Bcfe in Texas. Overall, the Company had a 88% drilling success rate during 2013 on 40 gross wells drilled.

The following table sets forth an analysis of the Company's estimated quantities of net proved and proved developed oil (including condensate), gas and natural gas liquid reserves, all located onshore and offshore the continental United States:

	Oil in MBbls	NGL in MMcfe	Natural Gas in MMcf	Total Reserves in MMcfe
Proved reserves as of December 31, 2010	1,623	8,373	174,566	192,677
Revisions of previous estimates	(294)	308	8,418	6,962
Extensions, discoveries and other additions	595	8,627	82,113	94,310
Purchase of producing properties	43	91	1,292	1,641
Production	(572)	(2,288)	(24,463)	(30,183)
Proved reserves as of December 31, 2011	1,395	15,111	241,926	265,407
Revisions of previous estimates	215	(958)	(52,076)	(51,744)
Extensions, discoveries and other additions	647	14,572	46,390	64,844
Sale of reserves in place	(81)	_	(15,806)	(16,292)
Production	(521)	(3,365)	(27,466)	(33,957)
Proved reserves as of December 31, 2012	1,655	25,360	192,968	228,258
Revisions of previous estimates	(123)	520	37,738	37,518
Extensions, discoveries and other additions	434	6,099	30,429	39,132
Purchase of producing properties	1,833	1,915	22,274	35,187
Sale of reserves in place	(34)	_	(15)	(218)
Production	(681)	(4,754)	(29,226)	(38,066)
Proved reserves as of December 31, 2013	3,084	29,140	254,168	301,811
Proved developed reserves				
As of December 31, 2011	1,160	11,071	143,441	161,472
As of December 31, 2012	1,225	20,608	140,307	168,265
As of December 31, 2013	2,709	23,173	163,728	203,152
Proved undeveloped reserves				
As of December 31, 2011	235	4,040	98,485	103,935
As of December 31, 2012	430	4,752	52,661	59,993
As of December 31, 2013	375	5,967	90,440	98,659

The following tables (amounts in thousands) present the standardized measure of future net cash flows related to proved oil and gas reserves together with changes therein, as defined by ASC Topic 932. Future production and development costs are based on current costs with no escalations. Estimated future cash flows have been discounted to their present values based on a 10% annual discount rate.

#### **Standardized Measure**

	December 31,							
		2013		2012		2011		
Future cash flows	\$	1,265,663	\$	748,914	\$	1,080,392		
Future production costs		(301,710)		(220,750)		(264,219)		
Future development costs		(193,985)		(121,346)		(180,846)		
Future income taxes		(40,072)		(10,205)		(86,612)		
Future net cash flows		729,896		396,613		548,715		
10% annual discount		(276,014)		(164,218)		(244,834)		
Standardized measure of discounted future net cash flows	\$	453,882	\$	232,395	\$	303,881		

### **Changes in Standardized Measure**

	Year Ended December 31,					31,
		2013	2012			2011
Standardized measure at beginning of year	\$	232,395	\$	303,881	\$	236,375
Sales and transfers of oil and gas produced, net of production costs		(134,184)		(92,562)		(116,398)
Changes in price, net of future production costs		57,293		(138,842)		(10,219)
Extensions and discoveries, net of future production and development costs		70,181		104,066		178,901
Changes in estimated future development costs, net of development costs incurred during this period		(24,327)		69,499		915
Revisions of quantity estimates		57,468		(56,352)		11,236
Accretion of discount		23,927		34,137		25,565
Net change in income taxes		(14,061)		30,617		(18,215)
Purchase of reserves in place		191,964		_		4,805
Sale of reserves in place		(411)		(8,186)		_
Changes in production rates (timing) and other		(6,363)		(13,863)		(9,084)
Net increase (decrease) in standardized measure		221,487		(71,486)		67,506
Standardized measure at end of year	\$	453,882	\$	232,395	\$	303,881

The historical twelve-month average prices of oil, gas and natural gas liquids used in determining standardized measure were:

	2013	2012	2011		
Oil, \$/Bbl	\$106.19	\$102.81	\$101.42		
Ngls, \$/Mcfe	5.10	6.07	8.62		
Natural Gas, \$/Mcf	3.11	2.20	3.34		

Note 17 - Summarized Quarterly Financial Information - Unaudited

Summarized quarterly financial information is as follows (amounts in thousands except per share data):

	Quarter Ended							
	N.	Iarch 31		June 30	Se	ptember 30	D	ecember 31
2013:								
Revenues	\$	36,009	\$	38,102	\$	55,587	\$	53,172
Income from operations		4,236		4,109		1,687		4,370
Income available to common stockholders		2,607		3,662		383		2,291
Earnings per share:								
Basic	\$	0.04	\$	0.06	\$	0.01	\$	0.04
Diluted	\$	0.04	\$	0.06	\$	0.01	\$	0.04
2012:								
Revenues	\$	36,041	\$	33,413	\$	33,951	\$	38,186
Loss from operations (1)		(18,314)		(52,183)		(35,919)		(24,027)
Loss available to common stockholders (1)		(18,608)		(54,520)		(38,639)		(25,451)
Earnings per share:								
Basic	\$	(0.30)	\$	(0.87)	\$	(0.62)	\$	(0.41)
Diluted	\$	(0.30)	\$	(0.87)	\$	(0.62)	\$	(0.41)

<sup>(1)</sup> Loss from operations and net loss available to common stockholders reported during the three months ended March 31, June 30, September 30 and December 31, 2012 included ceiling test write-downs of \$20.1 million, \$53.5 million, \$35.4 million and \$28.1 million, respectively.

**EXHIBIT 23.2** 

### CONSENT OF RYDER SCOTT COMPANY, L.P.

We hereby consent to (i) the inclusion of our reserve report relating to certain estimated quantities of the proved reserves of oil and gas, future net income and discounted future net income, effective December 31, 2013 of PetroQuest Energy, Inc. (the "Company") in this Annual Report on Form 10-K prepared by the Company for the year ending December 31, 2013, filed as Exhibit 99.1 of the Form 10-K, and (ii) the incorporation by reference in this Annual Report on Form 10-K prepared by the Company for the year ending December 31, 2013, and to the incorporation by reference thereof into the Company's previously filed Registration Statements on Form S-3 (File Nos. 333-190645, 333-124746, 333-42520 and 333-89961) and Form S-8 (File Nos. 333-188731, 333-184926, 333-174260, 333-151296, 333-134161, 333-102758, 333-88846, 333-67578, 333-52700 and 333-65401), of information contained in our report relating to certain estimated quantities of the Company's proved reserves of oil and gas, future net income and discounted future net income, effective December 31, 2013. We further consent to references to our firm under the headings "Business and Properties - Oil and Gas Reserves" and "Risk Factors," and included in or made a part of the Annual Report on Form 10-K prepared by the Company for the year ended December 31, 2013.

We further wish to advise that we are not employed on a contingent basis and that at the time of the preparation of our report, as well as at present, neither Ryder Scott Company, L.P. nor any of its employees had, or now has, a substantial interest in PetroQuest Energy, Inc. or any of its subsidiaries, as a holder of its securities, promoter, underwriter, voting trustee, director, officer or employee.

RYDER SCOTT COMPANY, L.P. TBPE Firm Registration No. F-1580

Houston, Texas March 5, 2014

# I, Charles T. Goodson, certify that:

- 1. I have reviewed this Form 10-K of PetroQuest Energy, Inc.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
- 4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15 (e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
  - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
  - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
  - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
  - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
- 5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the

audit committee of the registrant's board of directors (or persons performing the equivalent functions):

- (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
- (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
